FIFTY VARIETIES CARRIED IN STOCK.

Catalogue furnished by the Hardware Trade or mailed on application.

ANY DEALER knows that a Stove Polish which other manufacturers try to imitate, is the Polish for him to sell. The enormous sale of

Enameline Modern Stove Polish

Proves that dealers are friendly to it, and that consumers will accept no substitute for ENAMELINE. Why? Because it's

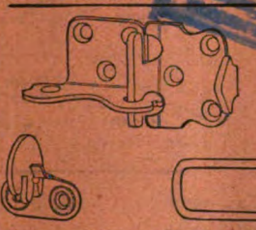
THE BEST!

"THE SURVIVAL OF THE FITTEST."

At the GRAND AMERICAN HANDICAP held at Elkwood Park, Long Branch, N. J., March 24 and 25, 1897,

U. M. C. PAPER SHELLS TOOK THE HIGHEST HONORS.

The Hon. Thomas A. Marshall, of Keithsburg, Ill., was the only contestant out of 134 shooters facing the traps who made a clean score of 25 birds. . . . . .



HE USED U. M. C. TRAP SHELLS.

Of the remaining 33 other prize winners, 27 used **U. M. C. SHELLS.** The result of this contest speaks volumes for the **quality of U. M. C. Goods.**

A sample of the kind of shell used by the winner of the first prize will be sent upon application.

HAVE YOU

A customer who wants the best Garden Hose money can buy—something that will last and last? **GIVE HIM 1846 PARA,—WE DON'T KNOW HOW TO MAKE A BETTER HOSE.**

Is your water pressure unusually heavy, and have you had trouble with ordinary hose? **THE DUCK IN TUXEDO IS THE STRONGEST EVER PUT INTO GARDEN HOSE,**---there isn't a water works pressure in the country that can burst it.

Have you any ladies amongst your customers? They always like red, and in summer have a weakness for white,—**OXFORD IS MADE IN JUST THESE COLORS.** It will please them,—and it wears as well as it looks.

These are simply samples of our line,—we have seven other grades to choose from.

A MODEL CAN OF VARNISH.

The handsomest and most attractive can of varnish ever put on the market is being sold by the Glidden Varnish Co., of Cleveland, Ohio, who are one of the most enterprising and progressive varnish manufacturers in the country and the first varnish house to offer a high grade of varnish at an advertised low price, to be sold only in sealed cans, protecting the painter so that he may know that he is getting a standard grade of varnish, and just what it is going to cost him.

These varnishes are called M. P. Special Coach Varnish and M. P. Special Spar Varnish. The former is to be used on interior work and the latter on exterior work. The advantage of using both of these varnishes is that they can be left in the gloss finish or rubbed with either water or oil and pumice stone, giving much better results than the old-fashioned hard oil finish, as they produce a very elastic and durable finish and will not bloom. Both of these varnishes are put up in handsome cans with the label lithographed on the tin so that they cannot rust out or peel off, thus giving the dealer a can of varnish that will always look bright and nice, as the label can be washed off with soap and water and not be injured. These cans are also equipped with the new fulcrum cap and nozzle with inner seal, so that when the seal is broken the can has an air-tight cap, thus keeping the varnish in good condition and preventing evaporation.

Dealers should lose no time in putting in a stock of these varnishes, as they will sell on sight and they offer a liberal discount to the dealers, as they want them to act as distributing agents for both these specialties. The retail prices are as follows: M. P. Special Coach Varnish, in five-gallon cans, $1.25 per gal.; in one-gallon cans, $1.40 per gal. M. P. Special Spar Varnish, in one-gallon cans, $3.50 per gal.; in half-gallon cans, $1.90 each; in quart cans, $.95 each; in pint cans, $.50 each.

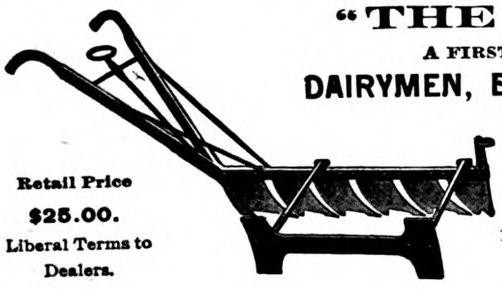
Hartman's Patent Inside Sliding Blind.



It is the most popular Blind in America; more convenient, 25 per cent. cheaper than the hinged blind, and will last double the length of time. The only blind that gives universal satisfaction. Tens of thousands are in use. Architects are specifying them on their merits. . . . . .

Also
Hartman's Patent Weighted Sliding Blinds are perfection themselves. Everybody is delighted with them. . . . .
Hartman's System of Window and Door Screens is very superior. . . . . .

THE CYCLE LIGHT FOR 1897 WILL BE THE BANNER

SEE the '97 **BANNER** and you'll buy it. Buy, and it will sell—sell and you'll have a profit. That's what we are all after. . . . . .

WHY did it make the hit of '96 although out 3 months late? . . . . . .

BECAUSE it was the best made road light, and the handsomest lamp on the market for the money. . . . . .

THE BEST being our maximum. That's what our '97 lamp is, better than our '96, and the best of all '97 lamps. . . . . .

THE REASON we can do it, is that we have the best equipment in the world to make kerosene goods; and 25 years experience back of it. . . . . .

OUR WICK LOCK POSITIVELY PREVENTS WICK DROPPING.

Absolutely Wind Proof. Will Not Jolt Out. No Solder to Melt. All Parts Removable.
Fills on Outside of Oil Fount. Solid Brass, Heavily Nickeled. Easy to Take Apart. Easy to Put Together.
A Perfect Road Illuminant. A Very Handsome Lamp. 5½ Inches High. Weight, 12 Ounces.
Burns Kerosene in a Packed Fount No Splashing.

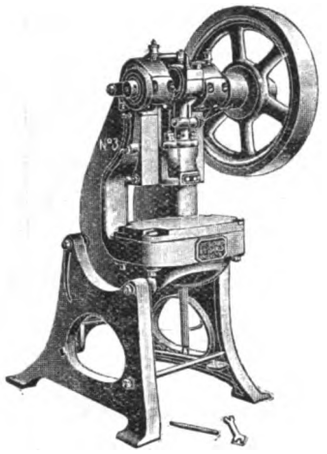
Gasoline Stoves and Ranges.

A full and complete line of Single, Individual, Generating and Evaporating Stoves and Ranges of every style, including our celebrated "Gem" line, which on account of quality, style and price are to-day the most popular, economical, labor-saving Vapor Stoves ever put on the market. Also a full line of Stationary, Lay-down and Removable Tank Junior Stoves.

Blue Flame Oil Stoves

Which are to-day recognized, by all who have given them a thorough and competitive test, as having more real merit than anything in this line heretofore attempted, or likely to be in the future; and for perfect workmanship, durability, simplicity and quick-lighting, they have no equal. We make them in eleven different styles.

Gas Ranges and Stoves.



For artistic design, combining all the latest improvements, both in burners, ovens, and valves; made both with steel or cast-iron bodies, drop or swing doors, and constructed with a view of economy in fuel, with quick and perfect work, with the best of material and workmanship, stand to-day unequalled.

We would suggest to all who are interested in securing the best in either Gasoline, Blue Flame Oil Stoves, or Gas Ranges and Stoves, that it will be manifestly to their advantage to inform themselves of what is in the market before placing their order for the coming season.

Catalogues of each of the different lines will be sent on application.

HARDWARE

VOL. XV. APRIL 10, 1897. NO. 1.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 148 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: CHICAGO, - - - - ASHLAND BLOCK. BOSTON, - - No. 33 EQUITABLE BUILDING. CINCINNATI, - - - No. 316 VINE STREET.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The pleasant weather which has prevailed during the past two weeks has been provocative of an increased number of orders, which is acknowledged as the feature of the business this month; while the orders are of a more frequent character, they do not increase in bulk to any appreciable extent, the wholesalers preferring that the manufacturers under existing conditions should carry the stock, and thus make unnecessary any large compulsory additions to their own.

Prices on many goods, on account of tariff uncertainty, are still in an unsettled condition, especially on foreign pocket cutlery, where the increased schedule of rates put upon this class of goods, causes the market to be well "held up." Then again, the "retroactive" feature of the tariff—which is undoubtedly in the nature of a "big bluff," as it would be characterized in the vernacular—will still have its effect in checking the usual rush orders so zealously cabled over by those desiring to take advantage of such radical changes. There is a very good stock of these cheaper goods now in the market, and transactions if of any size, will partake of a character more or less speculative in their importance. The demand for anything but the staples of the business has compelled a few factories running specialties only, to again shorten the hours they have been running, or "close for repairs" for a week or two; but the signs of slow business which these little points give evidence of, do not at all compare with the condition of affairs previous to election; they simply show by a waiting market, the timidity previously felt by our merchants for so long a time is difficult to overcome. Hopes are entertained that a few weeks more at farthest, will show a more encouraging prospect.

The bicycle business has so far been of a more conventional character than is desired, the demand for the higher priced wheels being extremely limited, and the sales that amount to anything cover low-priced goods that have been on the market long enough to establish a reputation for quality.

The surplus stocks which loaded the 1896 market are gradually being disposed of in some shape or another, and the output of 1897 wheels is watched closely, so there will be no repetition of last year's experience. The hope of leading makers seems to be that by the close of this year the spasmodic desire of a good many people with a mechanical turn of mind will be drawn away from cycle manufacturing, either in a manner indicating unprofitable conditions, or from inability to realize on capital already invested.

Wire and cut nails are still maintaining advancing prices, and with wire nails particularly a difficulty exists in obtaining prompt shipments.

Builders' Hardware, while the sales are notably on the gain, owing to conditions favorable to building projects, still show no phenomenal improvement. New quotations on screws indicate by a reduction in prices the condition of trade, with accumulating stocks at factory.

An Economic Outlook.

The apparently apathetic conditions in the home markets still continuing, more than one of our own manufacturers are casting their eyes about them, to see if, in other countries where some headway has already been obtained at considerable expense, they cannot find that intelligent outlet for an increasing production that is already too large for home consumption only.

Competing as we do with England in so many of her provinces where her manufactured goods naturally have a steady sale, we possess the advantages of an economy in production seemingly impossible to equal. It is part of the American system to so regulate and improve our industrial possibilities by the use of labor-economizing tools, that the ease with which even unskilled workmen can manipulate automatic machinery proves to be greatly to the advantage of the producer. These aids to production have enabled us not only to supply her provinces with our shapely productions, but to "beard the old lion in his den" by invading her unprotected home markets. It is no novelty at present to be compelled to listen to a merited laudation of our unrivalled wares by the formerly bigoted Britisher, who has been taught to regard British trade supremacy as impregnable as the rock of Gibraltar.

No time was ever more favorable for us to press forward and occupy the vantage ground now offered to us by our old competitor. The strikes and trades union disputes will in England keep her following for some time the slow methods of production which seem incapable of change. The stubborn opposition to the use of automatic machinery, through the fear of a displacement of workmen who have no other department of labor in which they can be absorbed, coupled with the blind belief of the century-old factories of England, that "everything goes" if it is only British, affects the manufacturing lines so long established.

They cannot be made to understand the lessons our own success should have taught them, that the high wages of the American artisan have so stimulated the inventive genius of the country in the evolution of

Digitized by Google

labor-saving appliances, that if any difference exists between British and American wages, our largely increasing and more economical output results from an intelligent use of improved tools, the superiority of which in every field of competitive labor is gradually becoming recognized, even as our perfect productions find a permanent foothold in all the countries open to conviction.

Judging from recent dispatches, our proposed tariff is exciting unfavorable criticism abroad, especially in Germany and Italy. A discussion of this kind would prove one of the principal elements of disturbance, conspiring to upset our calculations, springing as it would from a retaliatory spirit manifested by foreign governments, whose markets would be affected by our too hasty legislation. It is to be hoped that the reciprocal advantages we have recently enjoyed will not meet an untimely end, by a summary cessation being given to our commercial efforts in countries we have made tributary to our mechanical skill.

The Bankruptcy Bill.

The following from the *American Stationer* touches on a great need, and why Congress won't agree on a measure which is so much needed by the business interests of the country is something that the average business man cannot understand:

An effort will probably be made very shortly to have the Senate pass the Torrey bankruptcy bill, and it is believed that the effort will be successful. The Senate has plenty of time on its hands, and it would seem as though it might devote some attention to reaching a conclusion as to this measure, which meets the wishes of the business community very thoroughly. It is not denied by anyone that a national bankruptcy bill is sadly needed, and it is rather difficult to understand why this particular bill, which is indorsed by nearly all of the prominent organizations of the country, should have so much difficulty in reaching enactment. It is to be hoped that this latest effort will have satisfactory results.

While some members of Congress may prefer a bill which only embodies purely voluntary features, the great majority realize that any fair bill must have both voluntary and involuntary features, and in point of fact such a bill is more in the interest of the debtor class than a bill which provides only voluntary features. For the debtor not only wants to get discharged from his debts, but he wants to have conditions for starting again so that he can get credit and do business. A purely voluntary bill would destroy confidence and shrink credit, without which there can be no permanent prosperity.

The Torrey bill is the best considered and fairest measure of any that have been proposed and ought to speedily become a law.

The John C. Jewett Mfg. Co., Buffalo, N. Y., manufacturers of refrigerators, water coolers, etc., have opened an office in the store of Neal & Brinker, No 168 Church Street, New York, which is in charge of their representative, H. E. Sturtevant. Samples can be seen by the trade at any time.

From April 1, 1897, Neal & Brinker, No. 168 Church Street, New York, have been appointed the salaried agents for the Hartz & Eddy's Patent Steel Tackle Blocks, and have a complete stock of same and can quote factory prices.

Why Merchants Fail; Why Merchants Succeed.

"Six-tenths of the failures in business result from inexperience, extravagance and neglect; two-tenths from natural dishonesty; one-tenth from speculation, and one-tenth from misfortune."

If a merchant has an automatic and perfect check on all the transactions between his clerks and his customers; if he has time to watch the other details of his business; if he systematizes his business and stops all the little leaks, and if he knows what is going wrong, and is consequently able to stop it, he should not fail from any af these causes.

The National Cash Register Co., Dayton, Ohio, have devised systems for all kinds of retail stores, and are designed to give the retail merchant such a check on his business. A description of these systems may be had upon application.

If you will send your name, address, business, number of clerks employed, percentage of business done on credit, and stating whether or not you employ a cashier, to Department "H," The National Cash Register Co., they will send you in return a handsomely printed description of a system used in stores like yours.

Japanese Business Depressed.

G. H. Schuler, of Cleveland, Ohio, was among the passengers who arrived recently from Japan. He is manager of the Consolidated Steel & Wire Co., one of the largest nail manufacturers in the world, and naturally took special interest in that subject. Mr. Schuler says that the Japanese either make nails by hand or import them, but that they contemplate the establishment of nail works at Osaka, with forty machines, capable of producing 800 kegs of nails every twenty-four hours. They also intend to increase the duty on foreign nails from 5 to 20 per cent. It is stated by Mr. Schuler that business in Japan is in a very depressed condition. Under the idea that the Chinese indemnity was inexhaustible, they contracted for more foreign goods than they were able to pay for, and the consequence is that there is merchandise of this nature to the value of 50,000,000 sens lying in the import warehouses, as no money can be obtained from the banks, and foreigners have learned to place no confidence in Japanese promises to pay, as they cannot be enforced under the laws of the country.

Bissell's New Display Easel.

The Bissell Carpet Sweeper Co., in order to fill a want expressed by some of the larger trade who desire to make elaborate display of Bissell sweepers, have just produced a double easel that is very handsome in design and rich in finish. It is made of solid and quarter sawed oak, nicely finished in antique, tastily carved and ornamented. It is seventy-six inches high and thirty-four inches wide, and will display ten carpet sweepers at one time, and is so constructed that it can be used either on the open floor or against the wall, both equally well. When requested, with their first order for two dozen or more "Cyco" bearing sweepers to be shipped at the same time, the Bissell Carpet Sweeper Co. will include this excellent easel gratis.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, April 14th, at 5 P. M. The Association will take some action on a resolution as offered to the legislature by the Massachusetts State Board on docks and terminal facilities. The principal guest of the evening will be Col. Albert A. Pope, president of the Pope Mfg. Co., who will deliver an address relative to the growth and development of the bicycle and the bicycle industry.

The Death of Charles Morrill.

Charles Morrill, the well-known manufacturer of Hardware specialties, at No. 35 Warren Street, New York, died on April 5th, at his residence, No. 24 West Eighty-third Street, from a complication of diseases from which he had been a sufferer for a long time. A widow and four children, two sons and two daughters, survive him; the eldest son being 19 years old, and now at college. Mr. Morrill was born in 1828, at Hanover, N. H., his father being Jonathan Morrill.

In the earlier part of his busy and useful life, Mr. Morrill was engaged in the building trade, and as he was a clever architect, his houses were built from his own designs and specifications; among a number of public buildings in various parts of the country, he erected the Academy of Music on East Fourteenth Street, and Dime Savings Bank building at Broadway and Thirty-third Street, New York, also the Continental School at Trenton, N. J. He had already filled the position of special agent of the Treasury Department previous to embarking in any commercial transactions.

In 1877 he commenced the manufacture of a number of specialties of his own invention, with the sale of which his name has been honorably identified ever since; consisting of saw sets, bench stops, cutting pliers and seal presses, many of which are well known to the Hardware stocks both here and abroad, and for twenty years he has been a leading maker of such goods. He was a member of the Hardware Club of this city.

Mr. Morrill in his family relations was of an extremely domestic temperament, of generous impulses and open hearted to a fault; fond of his family and his congenial surroundings, which were always of a social and harmonious character. He had an exceedingly intelligent appreciation of everything artistic in its nature, enjoying the finest of modern decorations with which his residence is filled. He was a great lover of the fine arts, many very valuable paintings not alone covering the walls of his home, but also those of his business office. He was an ardent admirer of the horse, being the owner of no less than eleven thoroughbreds on the day of his death. He was also noted as being a *raconteur* of the most enjoyable kind, having a fund of good stories, which enlivened the social intercourse with his friends, and from which he drew many a quaint recital.

It is gratifying to know the business so long conducted by him will still be continued without material change.

"Heinisch's" English Reputation.

The following article, in regard to America's superior reputation in the line of shears, is taken from the *London Tailor*, of London, England, edited by T. H. Holding, an authority in his line. It appeared as a leading editorial and was written entirely without the knowledge of the R. Heinisch's Sons Co., Newark, N. J., of whose goods it speaks in such high terms:

REGARDING SHEARS.

Shears are an important matter to tailors. Their prejudices, their likes and dislikes, whether they are real or not, are both manifest and deep rooted. We remember in the early days the hard, strong, ill-shaped handled shears —instruments of direst torture we used to call them—invented and made by someone in London. Then we remember various other English-made shears of very splendid quality, which were a tremendous improvement.

But latterly, bit by bit, Heinisch's American Shears have erased almost all makers from prominence, at least in England. The "Clauss" shears came to the front, and the "Perfection," for which Messrs. Harding & Messenger are the vendors, are a good English article. It seems, however, that the shear that meets with most approval—we suppose, because most comfortable—is the American model. We have tried and examined a great many, it is true, in thirty years ourselves, and are bound to confess that at present they are, without exception, at the top of the tree. At present we have no grounds for saying this, other than they are the actual shears we use.

Now for the main purpose we have in penning this article. We have been conferring with the English representative of Heinisch's firm. We first wrote to ask whether the shears were made in England or America. Being confirmed that they were manufactured in the latter country, we said: "Why cannot we apply his splendid patent and manufacture them here?" The answer was "Cannot do it." "But supposing the model is perfected and patented, and the patent could be used in England, could you not produce the same article?" "No; it is impossible. Many firms have spent hundreds and hundreds of pounds," he replied, "without result, and the consequence is that we have lost the business and are losing it." "Do you sell many Heinisch's shears?" "Often an order for £1000 by one post, and a £25 order is a constant occurrence."

Of course, we enquired if there was something special in the machinery or the men. The reply was that the Englishmen would not or could not make the Heinisch pattern of shears. It is important that we should have the very best and handiest and most effective implements that are wielded by so many thousands, daily and hourly. But there is another thing that concerns a far larger constituency, and that is the English cutlers. Why should they not be able to produce the same beautiful article, with the same excellence of its best points? We can only close by leaving it an open question and asking the Sheffielders again, "Why?"

Sickels, Preston & Nutting Co.'s New Catalogue.

Sickels, Preston & Nutting Co., Davenport, Iowa, are distributing to their customers a very complete and handsomely illustrated catalogue of the various lines of goods handled by them. The volume is a credit to their progressive enterprise, and reflects to an appreciable extent the ability of the compiler. It is cloth bound, with good stiff covers, and composed of 496 pages, the catalogue being 9x12 inches in size. Builders' Hardware, mechanics' tools, farm implements, housefurnishing goods, cutlery, woodenware and metals, combined with a very large line of general Hardware, are embraced in its contents, which comprise the productions of many leading and prominent manufacturers, among which we notice Henry Disston & Sons, Nicholson File Co., Stanley Works, E. C. Stearns & Co., Stanley Rule & Level Co. and Yale & Towne Mfg. Co. It is a well made book, one calculated to do good service, and should be found very convenient by the customers of this enterprising company.

The Hardware Buyers' Association whose rooms were formerly located at No. 107 Chambers St., N.Y., have recently moved into more commodious quarters in the new Graham Building, No. 127 Duane Street, corner of Church. They are very pleasantly located on the eighth floor of this handsome building, with modern elevator service and all necessary facilities for conducting business. The Association is under the management of C. W. Gause, formerly with the Simmons Hardware Co.

The annual meeting of the Texas Hardware Jobbers' Association is announced for April 21st at Houston. We are advised that the gathering promises to be a well attended and interesting one.

About $200,000,000 is the estimate by careful authorities of the world's production of gold during the year 1895. In three years the world's stock of gold has been increased by $537,000,000.

Picked Up "On the Road."

HOTEL RULES FOR TRAVELING MEN.

A friend, who evidently has the interest of the traveling men at heart, sends the following list of hotel rules, which he recommends to the careful attention of hotel landlords:

Guests are requested not to speak to the dumb waiter.

Guests wishing to get up without being called can have self-rising flour for supper.

The hotel is surrounded by a beutiful cemetary. Hearses to hire, 25 cents a day.

Guests wishing to do a little driving will find a hammer and nails in the closet.

If your room gets too warm open the window and see the fire escape.

If you're fond of athletics and like good jumping lift the mattress and see the bed spring.

If your lamp goes out take a feather out of the pillow; that's light enough for any room.

Anyone troubled with nightmare will find a halter on the bedpost.

Don't worry about paying your bill; the house is supported by the foundation.

All politicians invited to drink nothing cheaper than 25-cent whiskey, and a suction connection in every room.—*Boot & Shoe Recorder.*

TOLD BY TRAVELERS.

"Come in tomorrow."

"All right."

Then the man of samples picked up his grips and headed for the next customer.

Then the storekeeper turned to me, and remarked: "I've been waiting nine years to get even with that duck, and the time is at hand now."

"What do you mean?"

"Nine years ago that man was a buyer and I was hustling on the road. He kept me dancing attendance at his place of business until my patience was exhausted. Then he cooly informed me he never intended to buy my goods. The whirligig of time has wheeled around enough to make me a fairly successful merchant and he is knocking about with a new line of goods. Now he comes in and wants me to buy. If I don't make him tired before I get through, then put me down as soft-hearted. When he tumbles to the game I'm playing on him I'll remind him of the way he treated me nine years ago and let him know that my memory is better than my forgettory."

"That's a lesson for overbearing buyers."—*Exchange.*

ONTO HIS JOB.

"Tickets, please, gentlemen," said the conductor, and they were all produced, save that of a poor, feeble old gentleman, who searched all his pockets in vain for his, and the fellow passengers growled exceedingly.

"Train is waiting for you sir," went on the conductor. "Why, there it is in your mouth, sir, all the time."

And the train moved on.

"Do you suffer much from absence of mind?" asked one of "the boys."

"Absence of mind be hanged," returned the poor, feeble old gentleman. "I was sucking the date off a last week's ticket."—*Sample Case.*

SAM JONES ON DRUMMERS.

This article I propose to devote to the drummer. There is no more characteristic character in history, or science, or art than the drummer. He is multidudinous, many sided and ubiquitous. Wherever commerce is known and traffic is carried on, the drummer goes.

Having been on the road almost constantly for fifteen years, my contact with this class of men has been frequent; and, to be candid, the more I have seen of the drummer the more I can see that he has a big heart and an intelligent head.

The drummer of to-day compared with the drummer of fifteen or twenty years ago makes one think favorably of the doctrine of evolution, at least in some of its phases. There is an immense difference, morally, at least, between the drummer of to-day and the drummer of twenty years ago. The profane, whiskey-drinking, beer-soaking gambling drummer is an exception. The rule is that the drummer is a bright, upright, intelligent, moral man. Some of the best men I know in America belong to the Travelers' Protective Association.

The characteristic drummer, with his fund of jokes, with his good humor, with his tact and talent, is a very interesting man. Take him at the hotels, on the railroad trains, on the streets and even when he is pushing his traffic, everywhere you find illustrations of pluck and vim and enterprise and get-up-and-get.—*Exchange.*

Stitched Cotton Belting.

The Rossendale-Reddaway Belting & Hose Co., Newark, N. J., are manufacturers of a superior article of stitched cotton belting, which has for a long time possessed the confidence of those handling and using machinists' supplies. Cases are cited by the manufacturers where, after

an outside exposure of seven years, the same belt is still doing good service and showing no serious deterioration as to running quality. They are also large manufacturers of linen fire hose, of a quality that is held high in the esteem of the companies who have adopted their goods. Their advertisement will be found on page 4.

Electricity in Belts.

Some time since an engineer in a large factory called the attention of a visiting expert electrician to the electricity in a big driving belt, and was quite surprised when the expert informed him that the electricity was caused by the belt slipping. The expert added that it was simply a wasting of power and could be prevented by applying Dixon's Traction Belt Dressing, made by the Joseph Dixon Crucible Co., Jersey City, N. J. This dressing was applied and the electricity disappeared at once. Electricity in belts is not only a waste of power, but is also an element of danger by fire.

Superintendent Wanted.

Simply for the purpose of assisting some first-class man to a first-class position, and on our own responsibility, we call attention to an advertisement on page 58 of this issue, where the Hitchcock Lamp Co., of Watertown, N. Y., state that they wish to engage a factory superintendent. All applicants should address them as above stated.

HARDWARE's "Prices Current" are reliable.

Commercial Value of Politeness.*

BY NATH'L C. FOWLER, JR., DOCTOR OF PUBLICITY.

The cultivation of courtesy is the most profitable harvest in the field of business.

Politeness costs the least, and pays the best.

A kind word often clinches the trade, and clean-cut politeness frequently builds business.

It is obvious that the customer is unreasonable, and that the practice of courtesy on the part of the customer is as commendable as on the part of the clerk, or employee, but so long as the seller desires to sell more than the buyer desires to buy, just so long is it necessary for the seller to use the commodity of courtesy as legitimate bait for the drawing of trade.

Over-politeness is better than gruffness.

There are two lines of railroad running from New York to Philadelphia, and one road is worth five times as much as the other; the accommodations are nearly identical, the running time is about the same, and the question of safety is perhaps in favor of the larger road; but hundreds, and thousands, of people, including the writer, travel between these two cities upon the cars of the smaller road on account of the gentlemanly politeness and courtesy invariably shown the passenger by every employee, from the ticket agent to the brakeman.

It is a delight to travel amid the surroundings of courtesy, and to feel that you can ask a question and receive an intelligent and cordial answer.

The larger road cannot be called a discourteous corporation, for it treats its passengers as well as the majority of roads do, but the smaller road has a set of employees, from the highest to the lowest, every one a gentleman, and every one seeming to take a personal interest in the comfort of the passenger.

This smaller road is rapidly building up its business, and every through passenger it carries may be considered as one from the larger road. It has won this business almost entirely by act of courtesy, because it has not any better facilities to commend itself to public favor.

In a city I know there are two theatres, one managed by a gentleman and the other by a human hog. It has been said that the applicant for passes would rather be refused by the gentleman than favored by the hog.

In the heart of Philadelphia is a great department store. Perhaps this house sells no better goods, and maybe it does not charge the lowest prices, but it is crowded from cellar to garret, because every clerk there is either a gentleman or a lady, and the customer is treated with courtesy, and with politeness, whether he buys or does not buy.

Courtesy is a commodity, and there can be no better trade mark for the building and holding of trade than universal politeness to everybody, and a manifest interest in the welfare of the customer.

Bicycle Board of Trade.

A two days' meeting of the board of directors of the National Cycle Board of Trade was held at the offices of the corporation, No. 271 Broadway, New York. The business transacted was principally of a routine character, looking to the conduct of the affairs of the board during the ensuing year, this being in reality the first meeting of the new board of directors since the annual meeting.

The treasurer submitted his report, showing the finances of the board to be in a thoroughly sound and satisfactory condition. A great part of the first day's meeting was taken up in adjusting matters connected with the Eastern and Western Cycle exhibitions, none of which was of any very great importance.

The fact that the board has secured larger and more ample accommodations in the Central Bank Building was a cause for general satisfaction among the directors, and it is expected that the board will move to its new offices in the course of the next two weeks. Applications were received for sanction for the exhibition of bicycles on two trains, called respectively, the White Special and the U. S. Trade Exposition Train. These trains will tour the country on a six months' schedule, but the applications for sanction for the exhibition of bicycles were refused.

The directors of the Tennessee Centennial and International Exposition, to be held at Nashville, Tenn., May to November, 1897, applied to the board of directors for sanction to enable the members of the board to exhibit bicycles at this Show, and have expressed a willingness to set aside an exclusive building for the exhibition of bicycles. The sanction asked for was unanimously granted, as was also a like application from the Trans-Mississippi and International Exposition, to be held at Omaha, Neb., June to November, 1898.

The second day's session was mainly devoted to the consideration of the desirability of holding National Cycle exhibitions. President Garford invited every member present to express himself very fully on the subject, and after a very lengthy discussion, it was unanimously

Resolved, That, inasmuch as the board of directors are but a small number of those interested in the bicycle industry, and feeling that the board should have an expression from the stockholders as to their views, it was

Resolved, That the Executive Committee formulate certain questions on that line and request an immediate response by return mail; these to be considered at another meeting of the board of directors to be called by the president as soon as the answers were received, when it is expected that the question will be decided for good and all.

The secretary was instructed to place himself in communication with the proper parties to investigate the status of the bicycle business in foreign countries, and to lay any information so received before the members of the board.

Senator Guy's bill to prevent fraudulent statements in advertising was submitted to the board, and they unanimously passed a resolution that the following telegram should be sent to the Hon. Chairman, Judiciary Committee of the Senate, as follows:

Hon. Chairman, Senate Judiciary Committee,
Capitol, Albany, N. Y.

At a meeting of National Board of Trade of Cycle Manufacturers to-day, the following resolution was unanimously adopted: *Resolved*, That National Board of Trade of Cycle Manufacturers representing the bicycle industry of America, respectfully urges the passage of Senator Guy's bill as to advertising misrepresentations.

ERNEST R. FRANKS, Secretary.

Hardware Club Election.

A meeting of the Board of Governors of the Hardware Club of New York was held on March 25th, at which the election of officers for the ensuing year was taken up. The following officers, who have given most excellent service in the past, were unanimously chosen as their own successors:

President, Peter McCartèe.
Vice-President, R. H. Swayze.
Treasurer, Thomas F. Keating.
Secretary, J. Leonard Varick.

The Cleveland Target Co., Cleveland, Ohio, inform a *Hardware* representative that the target business is opening up very nicely for this year, and that their trade is fully up to last year's business. They are putting out a great many of their Magautraps, and are meeting with most excellent success wherever these articles are being used. They anticipate an increased sale of these traps, as they are something entirely new, and far superior to their old style traps.

*Copyright, 1897, by Nath'l C. Fowler, Jr.

RECENT TRADE PUBLICATIONS.

Tower & Lyon, Nos. 95 Chambers and 77 Reade Streets, New York, have just issued their 1897 catalogue which is their "No. 10." This catalogue is in a compact form and size, greatly at variance with any of their previous trade publications, but which they believe will be found more convenient for handling or for a ready reference. It is certainly in a line with catalogue reform, and a great improvement over the usual pamphlet catalogue, and is composed of 120 pages, 8½ by 4¼ inches in size. In this concise and compact form the catalogue covers the entire line of tools and specialties handled by this old and reliable firm, including Chaplin's planes, Champion screwdrivers, expansive bits, nail pullers, extension sight levels, engineers' wrenches, pipe wrenches, Stephens' vises, malleable oilers, etc. The characteristics of the Chaplin planes are almost too well known to bear repetiti n, consisting of both smooth and corrugated faces, with wood or checkered rubber handles. The "Champion" and machinists' screwdrivers are specialties that have long been features in every first class stock of tools. Clark's expansive bits are shown with graduated shank, which makes a very desirable depth gauge in use. The line of tools catalogued is of an exhaustive variety, including with many others of latest design and utility, the entire line of "Krauter's" tools, so well and favorably known to the trade as "Newark" goods. The large line of police equipments shown in this catalogue is of an unique character, comprising in its completeness handcuffs and leg irons, balls and chains, police nippers, clubs and belts, wreaths, numbers, shields, badges, pistol pockets, prison pails, calls and whistles, etc., and including even the "humane forms of restraint, implements designed for the security of the insane, with the least possible discomfort and injury to the patient or prisoner." Dog collars and bicycle padlocks, Brown's brass spring padlocks, McWilliam's superior extra heavy Scandinavian padlocks, are shown up to a size large enough for warehouses, jails, etc., and of a quality that cannot be forced or broken. A large assortment of carriage or dash lamps is catalogued and fully illustrated, a feature of importance which applies to all the various lines of goods. The cuts illustrating the same can always be obtained by any local dealers desiring to make their catalogues or advertising more than usually graphic or descriptive. The catalogue concludes with the extensive variety of Martin's prepared fish glue, put up in great variety and in all manner of forms, from display boxes holding one dozen small bottles, to barrels holding 45 gallons. This line includes shoe glue, paper glue, belting cement, "Mystic" cement for glassware, etc., and "Mystic" mucilage and glue for office and other purposes. Tower & Lyon are well known as the agents for the Union Hardware Co., Torrington, Conn., a separate catalogue being issued for their extensive productions.

The Enterprise Mfg. Co. of Pa. have ready for the Hardware and housefurnishing trade their new and very complete catalogue for the business of 1897, which makes an attractive pamphlet of 84 pages. Manufacturers as they have been for so many years of a large line of meritorious goods in the trades above referred to, every page in the catalogue will prove of great interest to the up-to-date Hardwareman. Cold-heating sad irons—which from the earliest years of the company have been among their most notable productions—are illustrated in all their many varieties, to which is added the gas burning sad iron heater, which so greatly lessens the burdens of the appreciative housewife that "ironing day" ceases to be the dread it was formerly. The meat choppers, which have achieved a prominence in that especial department that makes their excellence known universally, are shown in a very extended line from the small hand chopper to the butchers' and geared power sizes, the latter capable of chopping 1500 pounds of beef an hour, and weighing 737 pounds each. These power choppers have been vastly improved during the past few years, dispensing with a number of wearing parts, and doing away entirely with the tail screw. In consequence of these and other changes, the knife and plate last twice as long without the need of sharpening. The Enterprise lines of coffee, spice and drug mills, which have long held a high place among their specialties, cover a number of pages, and are shown from the small size, weighing only six pounds, to the coffee mill towering nearly six feet high and weighing over 300 pounds. Many other noted specialties follow, upon which the name "Enterprise" has conferred a patent of salability, among which may be noted: Sausage stuffer and lard presses, bone, shell and corn mills, self-gauging cheese knives, self-measuring faucets, for molasses, thick oils, varnish, tar, etc.; self-measuring pumps, smoked beef shavers, bung hole borers, barrel jack, truck and stands; lawn mowers and sprinklers, fruit, wine and jelly presses; raisin and grape seeders, slaw cutters, kraut cutters, ice shredders, mole traps, cork pressers and pullers, cherry stoners, fruit augers, tobacco and root cutters, tincture presses, etc. Certainly an unparalleled line of useful inventions and mechanical devices, that necessarily form a part of every Hardware stock throughout the United States.

We are in receipt of the catalogue for 1897 issued by the Steward & Romaine Mfg. Co., Ltd., Philadelphia, illustrating and describing the single and double patent parallel expansion bolts which have for eleven years been manufactured by this company. These very useful appliances have been well appreciated in their many applications to such work of constructive excellence as is found among masons, machinists, plumbers, steam heating companies, electric companies, electric street railways, etc. The greatest use for these expansion bolts would seem to be in places where it is not desirable to drill through the material to which the fastenings are to be made, for in such cases there is no better method of obtaining the best results, superseding entirely the old fastenings, usually imperfect in their application, and the facility with which these bolts can be adjusted must result in a great economy of cost in the completed work. Among the advantages of this bolt referred to by the manufacturers in this catalogue, they state that "for fastening materials of all kinds to stone or brick work, screw eyes for trolley wire support for electric street railroads, guys for smoke stacks, fire escapes, vault lights, brackets for steam heating purposes, engine beds to masonry or solid rock, bridge work, window and door frames, cornices, elevator tracks in buildings, railings, signs of all kinds to stone fronts, etc., nothing can be found to equal it."

E. T. Barnum, Detroit, Mich., the well-known manufacturer of wire, brass and iron work, is at present busily engaged in getting out his annual spring catalogues, and they are now in the hands of the press. Through the large increase in this firm's business, and the many lines they manufacture, they are obliged to issue various catalogues

Digitized by Google

to cover their field properly. For instance, they issue a special catalogue of bank and office railings, partitions, fixtures, etc., and showing many of the latest improvements in this style of work. Another is a special catalogue for the Hardware trade, one especially for builders and contractors, and one devoted entirely to jail cells and fixtures, of which this firm make a specialty. Besides these, to keep pace with the new designs and improvements, this enterprising firm issue a special fall supplement to their regular spring catalogues. Anyone interested will do well to write for catalogues, which will be mailed promptly.

Wm. T. Wood & Co., Arlington, Mass., the Sickels & Nutting Co., No. 35 Barclay Street, New York, agents, manufacturers of high grade ice tools, have recently distributed to the Hardware trade one of the most complete circular price lists, covering the line of ice tools suitable for a summer trade that has ever come to our notice. On four pages, with all necessary description, between thirty and forty tools are illustrated in an intelligent manner, and by the aid of a telegraphic code covering the final page, a large order could be forwarded by wire, delivery of which could promptly be made. With an experience of 60 years in the business it may safely be stated this circular price list is one that all dealers in these goods should be in possession of.

L. D. Berger, No. 59 North Second Street, Philadelphia, dealer in tinners' and roofers' supplies, are mailing to the trade a number of circulars showing the large lines of important specialties, of which they are wholesale distributers, covering, among other items: Railroad milk cans, either in the stock only, or in cans made up; bright and terne plates, in boxes or rolls; plastering wire and sheet zinc, in all widths; guarantee roofing paint, with a covering capacity of 400 feet to the gallon; plain and corrugated galvanized pipe, IX hot air pipe, round and square, and all the usual and customary tinners' supplies from soldering pots to roofing nails. They are headquarters on registers, and state they are prepared to do the largest register business in Philadelphia, and can include in the output heater pipe and foot boxes.

Thiem & Co., St. Paul, Minn., manufacturers of cycle specialties, have ready for the Hardware trade and dealers in bicycle sundries, their new catalogue for 1897, showing their various well-known bicycle specialties, among which may be mentioned: Thiem's adjustable toe clip, Weber's New Departure luggage carrier, North Star toe clip, with and without adjustable side guard; Weber's lamp bracket, Weber's cycle rack. These goods have been made by them for several years and have established a reputation for being salable and up-to-date sundries. The manufacturers express a desire to furnish any electrotypes needed by their patrons.

The Findlay Axe & Tool Co., Findlay, Ohio, Allerton, Clarke Co., Nos. 97 Chambers and 79 Reade Streets, New York, agents, have just published their 1897 catalogue of axes and edge tools, which also includes mining and railroad picks, mattocks and grub hoes. The pamphlet is an attractive one of sixty pages, having a neat and pretty cover with embossed gilt letters. The frontispiece is a view of their extensive works. Their product is handsomely illustrated by good wood cuts, and an excellent telegraphic code forms a part of the contents.

The Central Oil & Gas Stove Co., Gardner, Mass., have issued a complete catalogue of oil and gas stoves suitable for the business of 1897. The catalogue is a pamphlet of fifty-four pages, in which will be found fully illustrated an extensive line of oil stoves from the lamp stove with a list price of seventy-five cents, to a "parlor grand" listing at $12. Of gas stoves and appliances the assortment is even more remarkable, covering every possible demand for such goods. The catalogue will be forwarded upon request.

The Wright Shovel Co., Anderson, Ind., Arthur G. Sherman, No. 14 Warren Street, New York, sole export agent, have just issued a very neat little catalogue of their goods for export trade only, with illustrations showing their line, the list prices on which are left blank, the catalogue being intended to fit a commercial size envelope. Their product is made up under various brands or grades, but all the kinds are made from crucible or cast steel.

The Baldwin Brass Works, Nos. 211 and 213 East Randolph Street, Chicago, Ill. Catalogue of architectural brass and bronze goods, for stores, hotels, churches, theaters, cafes and restaurants, consisting of bank and office railings, grilles, wickets, elevator guards, mesh work, church chandeliers, etc. Many of these goods are shown in catalogue by appropriate illustrations.

The Simmons Hardware Co., St. Louis, Mo., have recently issued their "Circular No. 261," which is a paper-covered appendix to their large catalogue—and of same size—covering nearly 200 pages with an extensive variety of goods, most of which are suitable for their spring trade. It will be found a great convenience to their patrons.

The Hayden & Derby Mfg. Co., No. 111 Liberty Street, New York. Catalogue of Metropolitan automatic double tube and H. D. ejectors used by ship builders, boiler makers, engine builders and railroads. A variety of these goods are shown, accompanied by the customary tables estimating the capacity needed for a proper application.

W. W. Pryor Hardware Mfg. Co., Newark, N. J., W. W. Pryor & Co., No. 81 Chambers Street, New York, sole agents. Catalogue of mechanics' tools in large variety. Foster's door springs and other Hardware specialties, including revolving and conductors' punches, gas pliers, screw drivers, etc.

M. D. Halpin, No. 62 Reade Street, New York. Circular of Crichton's burglar proof sash locks. This sash fastener is designed to be used for purposes of ventilation as well as security, having a ratchet bar for use in the sash, which enables it to be locked at any point and released by simply pressing a button.

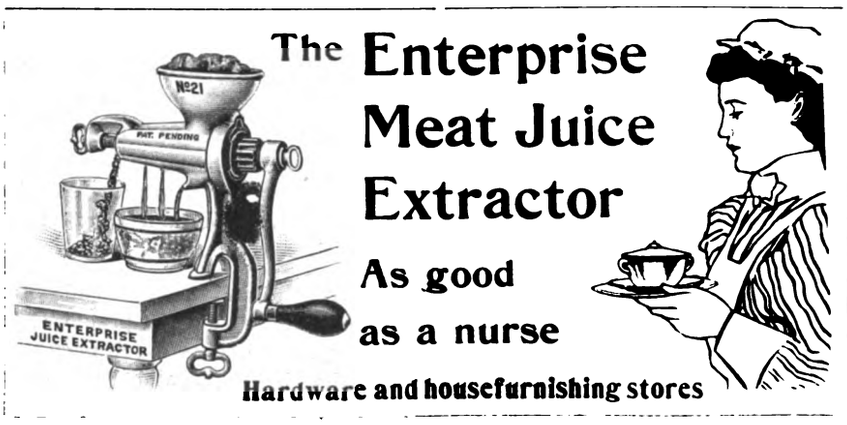
C. R. Meres Heater Mfg. Co., Norwalk, Ohio. Booklet having reference to their system of hot water heating and methods that have achieved successful results. Many testimonials attesting the superior economy and gratifying advantages of their system form a part of this pamphlet.

Fenton Metallic Mfg. Co., Jamestown, N. Y. Catalogue of the Fenton bicycle; a handsomely printed and well illustrated pamphlet of 24 pages, fully describing all the parts which in their completeness form the Fenton bicycle. The information is conveyed in a very artistic manner.

John P. Lovell Arms Co., Boston, Mass. Catalogue for 1897 of Lovell's "Diamond" cycles; a very attractive pamphlet of 40 pages, illustrating in a graphic manner the various models of "Diamond" cycles, manufactured by this company at South Portland, Me.

Iwan Bros., Streator, Ill. Catalogue and price list of drain tools, post hole augers and diggers, chimney cowls, conductor pipe hangers and mining tools, which have been among the products of this firm for many years.

Union Mfg. Co., No. 118 Lake Street, Chicago, Ill. Catalogue of Hardware specialties; many of them in the line of housefurnishing Hardware, and all of them fully illustrated.



One good road begets another, and so on and on clear into the adjoining county.—*L. A. W. Bulletin.*

Enterprise Meat Juice Extractor.

The Enterprise Mfg. Co. of Pa., Third and Dauphin Streets, Philadelphia, are placing upon the market the Enterprise Meat Juice Extractor, which is comparatively new to the trade throughout the country. In this connection we are permitted to reproduce a car sign describing and showing this useful article, which the Enterprise Co. are using for car advertising in the following cities: Syracuse, N. Y.; St. Paul, Minn.; Chicago, Ill.; Davenport, Iowa; Memphis, Tenn.; Des Moines, Iowa; Pittsburg, Pa.; Milwaukee, Wis.; Boston, Mass.; Rock Island, Ill.; Springfield, Mo.; Dubuque, Iowa; Omaha, Neb.; Buffalo, N. Y.; Denver, Colo.; Salem, Mass.; Peoria, Ill.; St. Joseph, Mo.; Little Rock, Ark.

If all these signs are as attractive as the one which the writer has noticed in the elevated trains of New York city, they certainly will attract a great deal of attention everywhere. In description of this article, the manufacturers say: "Its construction and design are mainly the same as our regular Combination Press, with the addition of such mechanical devices as to adapt it for the extraction of juice from meat (for which purpose it was more especially designed), also answering for extracting seeds and juice from fruits. The use of meat juice for medicinal purposes is a growing one, and is recommended for the aged, delicate infants and invalids, in all cases where complete nourishment is required in a concentrated form. The meat to be operated upon should be thoroughly warmed by being quickly broiled over a hot fire, but not more than to simply scorch the outside and then cut in strips. The yield should be about six ounces from one pound of round steak. Only tepid water may be added, as hot water will coagulate the meat juice. Season to taste. The machine being tinned, no metallic or inky flavor will be imparted to the material used. The dryness of pulp or refuse can be regulated by the thumb-screw at the outlet."

A Special Offer.

The Bissell Carpet Sweeper Co. have issued to their customers a circular letter calling the dealer's attention to the special spring offer they have to make, the main features of which are as follows:

First: All "Cyco" bearing sweepers are made in solid mahogany quartered sycamore, black walnut, quartered sawed oak in antique, natural and old English. These sweepers, with their superb finish, make an exceptionally rich assortment.

Second: With every first order for cyco bearing sweepers will be included gratis one window display shield, and at a special price of $2.25 each, will be included one Crystal carpet sweeper.

Third: With every shipment will be included an excellent assortment of advertising matter, including one large lithograph hanger; also several lithograph and embossed display cards nicely corded with silk.

Fourth: With an order for two dozen or more sweepers to be shipped at the same time will be included gratis, when requested, one of our handsome double easels.

Fifth: We offer the most complete line of toy sweepers ever put on the market.

These little sweepers have come to stay and no carpet sweeper stock is complete without at least a few of them.

Dealers should communicate with the Bissell Carpet Sweeper Co. concerning the features embodied in their circular letter, and obtain from them further details concerning many new features that they are bringing out this spring.

The Bissell Co.'s advertising department is rich with new literature, which is placed at the disposal of their customers in any quantity, free of charge.

"King" and "Queen" Bicycles.

The Union Bicycle Supply Co., No. 68 Murray Street, New York, have been appointed sole agents for the sale of "The Myers Safety Bicycle Stand and Home Trainer," to which we gave an extended notice in our recent issue of February 10th. In addition to the "King" and "Queen" bicycles for which they are sole agents, they carry a very large assortment of bicycle sundries of almost every description. They will mail upon application a poster hanging sheet, fully illustrating their varied stock and exceedingly useful for any Hardware or bicycle dealer, to assist in remembering articles which should form part of a complete stock in this important branch of their business.

The "King" bicycles above referred to are placed upon the market by the above company as being the lowest in price of any cycle sold under similar conditions, having all the latest 1897 improvements, the net prices on which are as follows: Single wheel, $27.50 each; 12 wheels, $25 each; 100 wheels and over, $22.50 each. The "Queen" bicycle, which is a ladies' wheel of substantially the same specifications, costs $1 additional to each of the above prices. They also carry a line of Juvenile wheels, the prices on which range from $16.50 to $22.50. Particulars regarding the above will be forwarded upon application.

The Clayton & Lambert Mfg. Co., Ypsilanti, Mich., report a steady growth of business extending back over the entire past depression, and feel certain of a larger summer's business than ever before. During the winter many automatic and time-saving machines have been added to their plant, and the increased volume of business has made the purchase of much larger power necessary. Their new line of round burner torches, designed especially for electricians, is meeting with great success, and they are destined to take place beside their big brother, the No. 1. They have in their building a modern and complete printing establishment, from which a handsome new catalogue has just been issued. All jobbers are supplied with descriptive circulars free, and they always consider it a favor to hear from the trade.

When a merchant knows his business it does not take the people long to know him.—*Hardware and Metal Reporter.*

The "Primus."

The Primus Cooking & Heating Apparatus Co., No. 197 Fulton Street, New York, are engaged in placing before the American people an invention that has since 1893 been popular in Europe, and which seems destined to materially change old methods wherever this apparatus can be utilized.

The universal use of kerosene for heating and cooking purposes has greatly stimulated the inventive ability of the world during the past ten years; realizing that some mechanical appliances could be made whereby the ease and economy attending the use of this cheap fuel would be made fully apparent. In consequence of this, the want was developed of a safe apparatus for the purpose, and "The Primus" seems to have been the result by which a radical departure from former methods was rendered possible. It was considered essential that it should be made for general use without the necessity for using the customary wick, which, burning a yellow illuminating flame, and on account of its tendency to smoke was considered undesirable for heating, and anything but cleanly for culinary purposes. The problem of transforming kerosene oil into a gas, with a blue heat-producing flame, which, though created through metallic burners gave out no undesirable soot was made necessary. This was reserved for the inventors of the improved Primus apparatus, which has only recently been introduced into this country, although well known in Europe since 1893.

Fig. 1 shows this remarkable stove in its most popular style; this particular form being the most desirable for domestic or household purposes, seems to be equally as beneficial for use in laboratories and technical institutes, in factories or drug stores—in short any place where it is essential to have an extra strong, powerful heat for melting or heating purposes.

Fig. 2 illustrates the same stove in connection with the Primus extension top stand, which more fully exhibits the practical utility of the stove for cooking purposes; the stand permitting the use of three culinary utensils at the same time, without additional consumption of oil; in this way it is possible to accomplish as much work as a medium sized range.

Among other ways by which this powerful heater may be found useful we notice the Primus yachting stove, in which the heating apparatus hangs in a balancing frame that is thus not affected by the swaying motion of the vessel.

Soldering stoves and melting apparatus are constructed upon the same principles, and which seem to have many advantages over anything previously constructed for such

FIG. 1.

mechanical purposes; owing to its compact form it requires but very little space, and can readily be moved from one place to another, as it requires no connection with tubing or chimney.

The same principle has also been applied to the Primus torch or blow lamp, the flame of which can be regulated, and the torch used in any desired position. As the flame of the lamp can be developed to a temperature said to exceed 2000 degrees Fahrenheit, it is especially suited for work in the open air, as would readily seem that no wind, however strong, could extinguish the flame; there are many uses to which the Primus torch can be applied. It would seem to be invaluable to painters for removing old paint; to plumbers for soldering purposes, or the thawing out of frozen pipes; or by gas fitters, tinsmiths, coppersmiths and electricians for many such uses as are inseparable from their vocations.

Underlying the construction of this wonderful lamp or

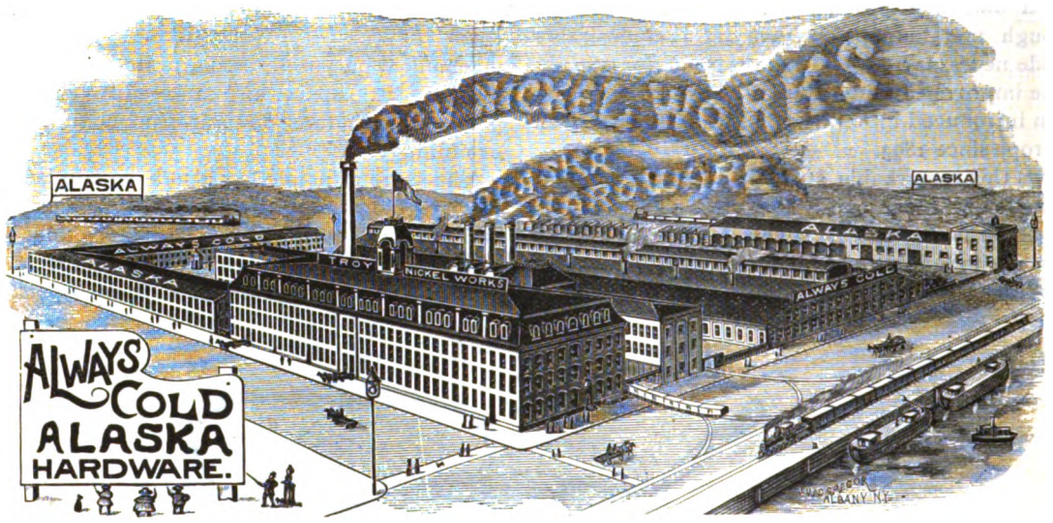

FIG. 2.

Digitized by Google

stove are several important features that deserve more than a passing notice: It requires no wick; lights without creating any smoke; is perfectly odorless and free from soot or oil sweating; has a practically indestructible burner, which is capable of producing a powerful heat that it is claimed will boil a quart of water in four minutes. Any grade of kerosene oil can be used, as it is impossible to fill the lamp while burning, the removal of the filler cap completely extinguishing the flame. As the gas generated in the burner is consumed as fast as produced, it is claimed to be absolutely non-explosive, and the lamp while burning may be turned completely over without the slightest danger resulting therefrom. It is certainly a mechanical appliance well worthy of a thorough inspection by those interested. We call attention to their advertisement on page 50.

Troy Nickel Works.

Mention was made some days since in these columns, of the new purchase made by the Troy Nickel Works, and we are pleased to show in this connection an illustration of their new plant at Albany, N. Y. They expect to be in

operation in their new quarters by the first of May. This is probably the largest plant of this kind in the world, and the fact that works of this size are required to carry on the business built up by the Troy Nickel Works, is the best guarantee possible in favor of the Alaska Stove Trimmings, which they have manufactured with such great success in times past and at present. The outlook for the future is even better than that of the past, as these goods are growing steadily in influence, and increasing in output with every year that passes.

Some Strong Commendations.

The Enterprise Mfg. Co., of Akron, Ohio, certainly have reason to believe that their goods have won attention and commendation in all parts of the country. A representative of *Hardware*, who was recently in Akron, was permitted to look through a file of letters received by this company from all parts of the country, in which their specialties were spoken of in the highest degree. For instance, E. V. Williams, of Springfield, Mo., secretary and treasurer of the St. Francois Hunting and Fishing Club, Hatchie Coon Lake, Ark., writes: "We have fifty confirmed fishermen in our club and use a lot of your Luminous Bait. I am not competing for a prize, but I will give you an experience I had the 15th of last August; one I can substantiate by a number of good, reliable witnesses. The limit in bass at the club house is 50 a day. With one of your No. 8 Luminous Phantom Minnows I caught the limit, 50 black and green bass, in less than five hours. They ranged in size from 1½ to 4 pounds in weight."

F. H. F. Merier, of Ottawa, Canada, voices his one complaint in the following words: "There is one great fault to be scored against Luminous Bait—it kills too many fish. All must agree that this is bad; for what are we to do when no fish are left to catch? But we are taught that sufficient for the day is the evil thereof, and if we can catch a handsome string on a dark day, when the fish won't look at anything else, I don't think it a heinous offense to use Luminous Bait. One does feel so cheap after spending a whole day fishing to return home empty handed; and it certainly isn't honest to buy the little boy's string and say you caught them yourself.

"Then, too, it must be pleasanter and more satisfying to the fish to have an illuminated funeral. It should feel better to be caught with a handsome bait than with a common black hook and a worm, a tinsel fly or pewter spoon. No fisherman with regard for the feelings of the fish (or himself) should be without Luminous Bait in his tackle box."

These are but meagre samples from a very large number. The Enterprise people are only anxious to be tested by the actual value of their production, and any doubting Thomas who does not believe that results will be produced by these appliances, as claimed by the manufacturers, need only write to Akron, Ohio, for samples of the goods, and prove the question for himself.

The Berlin Iron Bridge Co., East Berlin, Conn., have a contract for furnishing the steel roof for a large storehouse which is to be erected by the Waterbury Mfg. Co., Waterbury, Conn. The building is 54 feet wide and 144 feet long. The side walls are of brick. The roof will be supported by steel trusses. The covering is to be corrugated iron lined with the Berlin Co.'s patent anti-condensation fireproof roof lining.

The Dunham, Carrigan & Hayden Co. announce, under date of April 3rd, that as their accommodations at No. 107 Chambers Street, New York, have become inadequate, their business has been removed to the Graham Building, No. 127 Duane Street, at the corner of Church Street. They occupy a new fireproof structure in the midst of the Hardware district.

Henry Haas & Son, Nos. 551 and 553 West Thirty-fifth Street, New York, have been very busy pushing their Eagle bicycle pump, which they inform us is "booming beyond all expectations." They add that they have orders on their books for more than they can supply in the next two months, with plenty of others in sight.

The annual convention of the Southern Hardware Jobbers' Association will be held in Savannah, Ga., on May 12th, 13th and 14th. This is to be a strictly business meeting.

NEW GOODS AND SPECIALTIES.

The Tenax Folding Bicycle Stand.

Among the numerous folding bicycle stands which have been placed throughout the trade so successfully by Fred Hawley, Nos. 40 and 42 Gold Street, New York, especial mention should be made of the Tenax Folding Bicycle Stand, two illustrations of which we present in this article;

FIG. 1.

Fig. 1 showing it closed, in a manner which greatly facilitates its safe transportation all over the states, and Fig. 2, showing it ready for business in front of a store, to which the advertising head piece can be made quite an object of interest by arranging for frequent changes in the goods exploited in this manner. The illustrations show only the large size, No. 1, weighing 10½ pounds, and yet with a capacity for six bicycles, the measurements of which

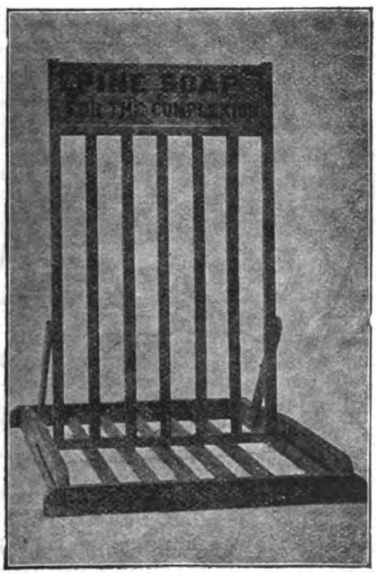

FIG. 2.

when open are 30½ inches long, 23 inches wide and 33¼ inches in height; the list price $1.75 each. A smaller size, No. 2, is also made, holding four cycles, and weighing but 8½ pounds, the list price of which is $1.60. Cycle stands of this character, distributed in the interest of the local agent for a leading wheel, would afford an excellent advertising medium, and while impressing the riders with their great convenience, would find a welcome in front of the most exclusive premises in any town where riders are plentiful.

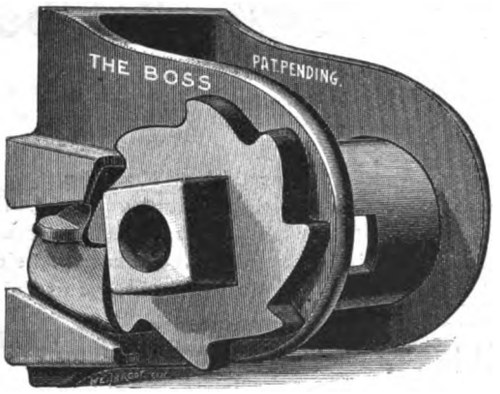
Andress' Glass Cutting Novelties.

Thomas J. Andress, No. 821 Cherry Street, Philadelphia, Pa., is identified with the manufacture of a line of glass cutting novelties, one of the best known being illustrated below. This is a good selling line of useful special-

ties, and embraces in its variety combined glass cutters and putty knives, glass cutters, can openers and knife sharpeners, glass cutters, knife and scissors sharpeners, and the same combination having a gas burner plyer attached, and another having a corkscrew added. These convenient appliances are reasonable in price and deserve to meet with a ready sale. Catalogues will be mailed upon request to the manufacturer.

Bissell's Toy Carpet Sweepers.

The "Little Queen" Carpet Sweeper shown in the illustration which we present herewith, is not as one might suppose, a full sized sweeper, intended for adult use, but is one of a line of toy carpet sweepers, made by the Bissell Carpet Sweeper Co., Grand Rapids, Mich., and No. 103 Chambers Street, New York, which have long been favorites among the Hardware and house-furnishing trades. The new prices on these desirable goods have just been issued by the above company, and will be found in our "Prices Current." The new designs are very attractive and while this line for catalogue convenience is designated as a "toy line," they are much more than mere toys; they are really very useful little carpet sweepers, and carefully constructed to fulfil the useful character of such goods as an every day convenience in taking up light

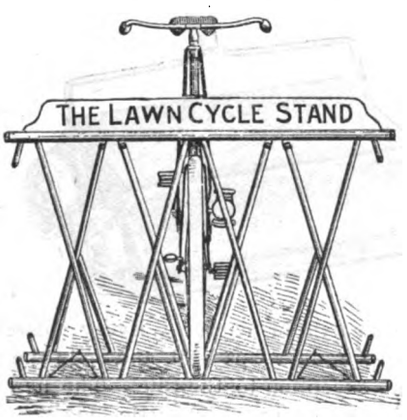


dirt from the hearth or carpet. Every Bissell carpet sweeper sweeps, and sweeps well, and even the little toy sweepers are no exception to the rule. The new line now enumerates the following: "Little Jewel," Bissell's "Little Queen," Bissell's "Child's" and Bissell's "Baby," and at either office of the Bissell company catalogues concerning this line, with full descriptive matter, will be furnished upon application.

The Boss Wire Fence Ratchet and Tightener.

W. C. Heller & Co., Montclair, N. J., are placing upon the market one of the simplest and yet extremely efficient devices now before the trade, to draw and keep the wire perfectly tight in any fence constructed of this material. This ratchet, which we illustrate herewith, is put on the

Digitized by Google



end posts of each 50 or 60 rod stretch of any make of fence wire. By turning the square part on the ratchet, with an ordinary wrench, absolute control of the fence is given, keeping it from sagging, breaking or in any way becoming unsightly. The catch can easily be held back to overcome the contraction of wire during cold weather, and when

necessary, the wire may be slacked to prevent it from breaking. By the aid of this useful appliance it is possible to build a fence with a great many less fence posts than in the old way. The ratchets are copper bronzed and very attractive in appearance. They are put up in wooden cases holding 100. Trade discounts given by the manufacturers on application.

The Lawn Cycle Stand.

The Lawn Cycle Stand Mfg. Co., Morristown, N. J., are manufacturers of the cycle stand of which we give an illustration below. It is designed for the use of families by placing it, as suggested by its name, upon the lawn; is also desirable upon the veranda or in any room set apart for bicycles. It has become very popular already at the grounds and club houses of tennis and golf players. The stands are made from quartered oak having a natural finish, likewise in maple and pine combined; the top and bottom rail being constructed from maple as possessing greater strength and durability, and is an improvement over those made in 1896, when they were constructed from pine only. They have been found to reach a great popularity on the sidewalks in front of large stores for the use of their riding patrons, as in many towns almost every store has perceived the great advantage of providing this convenience, usually having as an addition a small signboard as shown in the illustration, which permits the placing of special advertising of a local character, or the name of the firm only if desired. They are made in four sizes, to accommodate 2, 3, 5 or 7 wheels. They all have small rubber feet provided, which prevent their slipping, and a good feature in their construction is the fact that wheels can be placed from either side, so that by an alternation in the use of the openings they are more readily removed when necessary. Circulars conveying full information and giving list prices and discounts of the various sty es, will be mailed the trade upon application to the manufacturers.

The Goodrich Jiffy Repair Tool.

The B. F. Goodrich Co., Akron, Ohio, and No. 66 Reade Street, New York, are manufacturing the "Jiffy Repair Tool," which they are introducing to the trade, believing it will be found as useful an article for the purpose intended

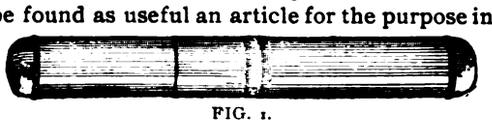


FIG. 1.

as anything now before the trade. It is intended for use in the repair of Goodrich Single tube tires, or other tires of a similar construction. We illustrate in connection with this article the few parts constituting this useful tool. Fig. 1, showing the style in which it goes into the

FIG. 2.

tool bag, while Fig. 2 is the tool proper, the point of which is inserted in any small puncture, and by turning the handle of the tool to the right, the solution with which it is filled is forced through the point of tool; plenty of solution should be used, so as to bring it in one mass directly over the puncture. Fig. 3 illustrates the appearance of

FIG. 3.

the inside of the tire when this repair is done successfully. Larger punctures are repaired in a somewhat similar manner, and with as little difficulty. The Jiffy solution which is used with the repair tool is a special mixture, and is furnished in bulk or tubes. Circulars giving full information will be mailed upon application.

A New Express Wagon.

The Canton Cycle Mfg. Co., Canton, Ohio, well known as manufacturers of the "Spark" cycles, are placing before the Hardware trade a new express wagon, every part of which is constructed in their works, and has formed part of their product for a long time. This is a cycle express wagon which is run by a chain gear, with pedals to the axles which are steered by a handle that is hinged in the centre, and bends back to the rider when sitting in the wagon. It is a very popular toy and is said to meet with a large sale wherever introduced, as it is made exceedingly strong and durable. The company are also extensive makers of a toy garden barrow, which is made in three sizes, and it is claimed is meeting with a popular reception among the dealers handling these goods.

Digitized by Google

Novelty Force and Spray Pump.

The Berger Mfg. Co., Canton, Ohio, are manufacturers of the Novelty Force and Spray Pump, the method of using which we show in the illustration herewith, where it is shown in operation. It is manufactured from the best materials, the air valves and hinges being made of copper, and with a perforated bottom which prevents all foreign substances from getting into the pumps and obstructing the valves. Several styles of tubes are furnished with

the pump, by which it can be used for showering trees, for general sprinkling on flowers, vines, plants, etc., for washing carriages, low windows, and sprinkling dusty streets, and for hiving bees, washing high windows, and extinguishing fires. The pump is quite neat in design, being compact in form and light to handle. It is made in three styles, brass, galvanized iron and the best quality of IX tin; every pump being thoroughly tested before shipment.

Leiner's Tire and Chain Brushes.

Hall & Downing, No. 82 West Broadway, New York, are introducing to the Hardware trade and dealers in bicycle sundries, two of the most useful novelties for the use of cyclists which have come to our notice, and illustra-

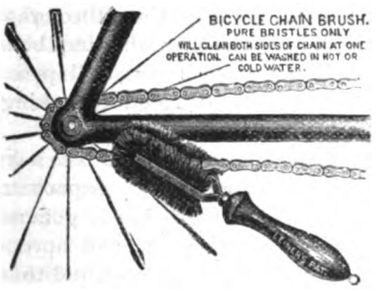

FIG. 1.

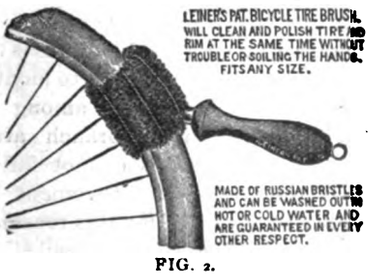
tions of which we present herewith. They consist of two convenient brushes, the use of which will be highly appreciated by cycle riders, to the most of whom the job of cleaning a wheel receives anything but a rapturous welcome. Fig. 1 shows the Bicycle Chain Brush, so constructed that it grasps both sides of the chain, which are freed from mud at a single operation; being made from pure bristles only, the use of hot or cold water readily cleans the brush in a few seconds. Fig. 2, similarly con-



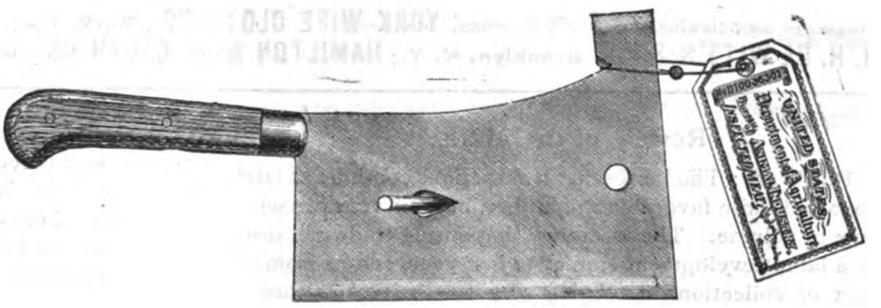


FIG. 2.

structed as to material and utility, represents "Leiner's Patent Bicycle Tire Brush," by the aid of which the tire and rim can be cleaned and polished at the same time, without even the fear of soiling the hands. It is made with a spring movement in its make-up, which permits its use on any size of tire without preliminary adjustment. The advertisement of these brushes will be found on page 47. To introduce them at once, the manufacturers offer to mail them on receipt of the nominal prices charged for the same, which are: Chain brush, 15 cents; tire brush, 25 cents.

Lowndes Patent Butchers' Cleavers.

John Chatillon & Sons, Nos. 85 to 93 Cliff Street, New York, are placing upon the market the "Lowndes Butchers' Cleaver," patented in 1895, which presents many interesting features, making it much more modern and up-to-date than is usual with this conventional class of goods. We herewith show an illustration of the cleaver, by which

its originality will be noticed. The protruding blade on the back cracks the bone in porterhouse steaks, chucks, shoulders, chops, etc., without hacking the meat or destroying the appearance of the steak. This also saves the front of the cleaver and leaves a straight edge for the chopping of meats, which will keep a butcher's block from being cupped out of true, as is usually the case. The blade of the cleaver is provided with a bevelled opening in the centre, by aid of which skewers can be extracted from ribs and chucks, with no danger of cutting hands or breaking knives. The little V-shaped cutter in the angle of the protruding blade, can be found useful in cutting the wire by which the inspectors' tag is fastened, saving the time of cutting it out, or pulling it away with a hook. The list prices at which these cleavers are sold are as follows: 8-inch blade, 1½, 2, 2½ and 3 pounds, $15 per dozen; 10-inch blade, 3 pounds, $20 per dozen. Discounts to the trade furnished on application.

The Boston & Lockport Block Co., No. 142 Commercial Street, Boston, inform us that the spring trade seems to be slowly opening up, and that so far as quantity is concerned, the prospects are that they will have a fair season. They cannot report any marked improvement as yet in regard to prices, and add "but think that that will follow, for as soon as our order book becomes fairly filled we shall feel more like insisting on our customers paying us nearer the right value for the goods." They report the receipt of an order for a suit of yacht blocks from Norway, from a gentleman who is building a forty-tonner, and with whom they have been in correspondence some twelve months. It is evident from this that the American blocks are preferred to those made in other countries.

The Akron Level Works, Akron, Ohio, have as their representatives in New York the Allerton, Clarke Co.; in Boston the E. H. Mansfield Co., and in Chicago, George W. Trout & Co. They carry in each place a good stock of goods on hand constantly, and prompt delivery will be made in all cases. They inform us that they are anticipating first-class trade this season.

Thiem & Co., of St. Paul, Minn., have brought suit in the United States Circuit Court against the Whaley Mfg. Co. of the same city, and others, for alleged infringement on their United States letters patent of Thiem's Adjustable Bicycle Toe Clip.

Anyone who has a Hardware store to sell, should address a note to E. I. P., care A. Seelig, No. 10 Second Avenue, New York, whose card inquiring for such a store may be found upon page 36 of this issue.

NEW YORK WIRE CLOTH CO.,

102 Chambers St., New York.

WORKS LOCATED AT YORK, PA.; BROOKLYN, N. Y.; HOMER, N. Y.; HAMILTON, N. Y

——MANUFACTURERS OF——

PAINTED HARD STEEL WIRE SCREEN CLOTH.

DOUBLE SELVAGE, STANDARD QUALITY.

Owners of the following brands of Wire Cloth: **YORK WIRE CLOTH CO.**, York, Pa; **THE WIRE FABRIC CO.**, Homer, N. Y.; **J. H. DE WITT'S SONS**, Brooklyn, N. Y.; **HAMILTON WIRE CLOTH CO.**, Hamilton, N. Y., and the **DIAMOND** Brand.

Review of the Markets.

Hardware: The increasing transactions continue as lately reported quite favorable in number, but still very conservative in volume. The inference that spring trade will result in a later development similar to last year, comes from the fact of collections not being any too brisk. Without a brighter outlook for a more extensive movement of goods, the unsettled prices engendered by tariff discussions alone will prevent enjoying this season the success so freely believed would be its prevailing feature.

A number of the travelers for manufacturers are at home, or on short trips; while those of the jobbing houses are many of them just sallying forth full of hope and confidence, well armed for the fray with low prices and favorable terms.

Wire nails: Continue in the favorable condition which has surrounded this industry for some time. The orders booked for delivery in April are gradually getting off the factory books, and in regard to delivery more favorable conditions are apparent, although immediate delivery is still the exception and not the rule. Many of the mills have been making record-breaking outputs, exceeding in number of kegs all previous data, evidently doing their best to satisfy their customers and avoid any inconvenience. The price at mill is still held at f. o. b. $1.40@$1.45, but for prompt delivery, wherever possible on present orders an advance of 5@10 cents a keg is demanded. New York prices are: Carload lots on dock $1.55@$1.60. Smaller lots from store, $1.65@$1.70.

Cut nails: Are in fair demand, but a greater ease is noticeable in point of delivery. Prices remain about as they have been in previous quotations. Car-load lots on dock, New York, $1.40; smaller lots from store, $1.50.

Builders' Hardware: An increasing enquiry encourages the manufacturers in believing the future has more business in sight than has been evident for weeks. With a continuance of fine weather, there will doubtless be a good demand springing up in this seasonable line of Hardware. Prices continue very low under competitive conditions.

Wood screws: Lower prices are named in this staple line of goods, as will be noticed in our reading columns. The demand, as in analogous lines of goods, has been only nominal for the season's supply, with good stocks at factory to draw upon.

Linseed Oil: A gradual improvement in price is still noted in this important staple. The Dean Linseed Oil Co., quote as follows: In lots of less than 5 barrels, 33 cents per gallon; in lots of 5 barrels or more, 32 cents per gallon; Boiled Linseed Oil, 2 cents per gallon higher; Calcutta Oil, 50 cents per gallon.

THE PHILADELPHIA TRADE.

The event of the last week has been the arrangement with the outside shovel manufacturers, by which this competition has been disposed of and the position of the shovel manufacturers thereby greatly strengthened. As we understand it, there is now practically no outside competition, and it looks as if the shovel manufacturers might be able to maintain prices for some time to come.

With this exception, there are very few changes in prices, as it is recognized that most goods are on the bottom, and there is no room for further concessions. It is also claimed on almost all sides that a demand such as is natural at this time of the year, will surely cause an advance in general quotations.

Wire nails are in fair demand and are held pretty steadily at advance prices with some talk of further rise.

On the whole, trade may be said to be fair, and certainly shows an improvement over the previous months. This improvement appears to be steady, and gives rise to hopes that it will continue throughout the year.

Hardware is certainly moving much more freely and in larger volume than at any time for a year past, and tools are again called for, which is a pretty sure sign of better times. Perhaps the most marked feature of trade during the past year was the falling off in the demand for tools, which showed that mechanics were not at work, so an increased demand for this line is considered a most hopeful sign.

April 1st is the usual settling time throughout the eastern part of Pennsylvania and for the time being money is, therefore, easier, but the country is still poor and this is shown by the difficulty experienced in making collections in many districts.

After the period of distress which we have just gone through, it is hardly reasonable to expect an immediate return of better times, but the belief is general and widespread they are surely coming, and apropos of this a large wholesale merchant recently pointed to his new store and said: "How long do you suppose it would take to burn this store?" The answer was, "Thirty minutes." "Yes," said he, "but it was a year and a half in building;" and so while it is easy to pull down business, it naturally takes some time for a return to prosperous conditions.

BIDDLE HARDWARE CO.

THE PITTSBURG TRADE.

March business in the jobbing line was fairly satisfactory, and there is quite a lively movement so far in April. Retailers are buying conservatively, but the orders, though small, show that the country needs goods.

The most encouraging sign of the times is the increased number of men employed from month to month. Though there is still considerable complaint among manufacturers of dull business, yet in one branch after another, men are being taken on, and this cannot fail to help the jobber in a short time. The improvement seems to be coming slowly, but surely, and for this reason, will probably be more permanent when fully realized.

Bicycles are the absorbing item at present. Agents in the towns and villages have mostly made their arrangements, and only wait drying up of the roads to do a good business. In the cities, where paved streets make riding possible, the demand is quite large.

LOGAN-GREGG HARDWARE CO.

THE CHICAGO TRADE.

We are having a larger demand for all lines of Hardware and cutlery than we have enjoyed before in six

- Write for Catalogue and prices.

months. During the past two weeks a marked revival has set in, several of our salesmen have sold new complete stocks of goods, which have been supplemented with quite an increase in our mail order department of regular spring and summer goods, so that our entire force of stock clerks, entry clerks, and packers have had to work over time several nights, until 10.30 or later.

Anticipating increased prices from the expected change in the tariff, is creating a demand for cutlery, guns and tin plate.

With settled spring weather, we confidently expect a first class trade in general Hardware.

WELLS & NELLEGAR CO.

THE DAVENPORT TRADE.

The Mississippi River has dismissed its winter cover and is enthusiastically celebrating the event. In fact, it is getting above its business in many places and slopping over. Just here it is still well behaved and keeps within bounds. Boats are running and our local packets are already bringing us business that during the winter has been diverted by east and west railroads to the city of department stores by the lake. The upper house of the Illinois legislature has expressed a desire by a vote of thirty-nine to four to have department stores depart from their State. Will they go? And what will the bargain-hunting women do then, poor things?

The mud is of not as fine quality as it has been, but there is more of it; hence the wheels sink deeper into the country roads and make wagon transportation very difficult, almost impassable, over our good state of Iowa, so rich in black loam soil. There is more demand for umbrellas and rubbers than for barb wire or nails; and more demand for sunshine than for either. The demand for free silver voters was greater than the supply as shown by the election of mayor and the entire city ticket in Davenport last Saturday. Money is scarce and hard to obtain; but our people insist upon having the best; what little there is of it.

Will write you all about trade and collections as soon as we have any; we are sure we will have both as soon as these persistent rain-clouds roll by.

SICKELS, PRESTON & NUTTING CO.

THE DENVER TRADE.

Although late and heavy snowfalls in the mountains are holding back trade from localities where they have occurred, the opening of spring in lower sections has brought what seems like a beginning of a realization of the improved trade which this season was expected to bring.

The fruit regions are jubilant over the prospect of more than average crops, agriculture in all lines promises well, mining is being vigorously prosecuted in every direction, and unless some very unexpected and unfavorable conditions arise, Colorado should surely be entering upon a prosperous year.

Not only in Denver, but in many other towns in the State, there is great activity in building lines. This city is fast taking on its old-time appearance, when one could not remain on the streets and get out of sight of new buildings. Everyone is too busy to ask "How is the new President and administration doing?" and, in fact, most people begin to realize that business does not depend upon the occupant of the White House.

The spirits of the people are rising with the temperature as the season advances, and may we not be disappointed.

GEORGE TRITCH HARDWARE CO.

THE ST. PAUL TRADE.

We are glad to report an improved business, though our country is badly flooded, delaying traffic of all kinds. Still this condition cannot last long, and with the sun shining, we feel as if spring were here, or would be ere long. Our sales for the last two weeks have been satisfactory, though prices are badly cut.

C. W. HACKETT HARDWARE CO.

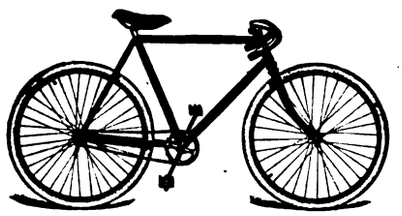
THE GRAPHITE TRADE.

The graphite industry for the first quarter of 1897, shows in point of money received, a less amount than for the first quarter of 1896, but in point of number of orders, they would outnumber those of the previous year.

This shows a tendency on the part of buyers to keep in line in hopes of better things.

The disposition is for close competitive prices, with a big daily mail of preliminary inquiries before ordering.

The business is steady as applied to the different articles of graphite manufacture, after due allowance is made for the seasonableness of the kinds.



We feel that thus far in the year there is nothing discouraging in the outlook, and we have held our own well. Goods were never better, and every attention paid to detail of finish and quality brings us a fair share of business.

As an item of interest we would report that we have shipped goods within the past two months to prominent houses in more than fifty cities in England, France, Germany, Austria, Holland, South America, Central America, West Indies, Hawaii, Belgium, Scotland, Portugal, Denmark, China, Japan, Cuba, Mexico, Australia, South Africa and India.

JOSEPH DIXON CRUCIBLE CO.

In a recent number of the *Hardware Trade Journal* our British contemporary makes a frank confession in the following: "Why is it that the English firms cannot produce tailors' scissors equal to the American make? Ask any tailor which he prefers, and he will unhesitatingly tell you that the American is the best because lightest and easiest to work with. The handle fits the hand more sweetly, and the weight being on the blade requires less exertion than with the English scissors. 'In fact,' said a tailor to our Sheffield representative recently, 'I can work a pair of American scissors all day and be less tired than after an hour of the English make.'"

Minute Workmanship.

In the twentieth year of Queen Elizabeth, says an English contemporary, a blacksmith named Mark Scaliot made a lock consisting of 11 pieces of iron, steel and brass, all f which, together with the key to it, weighed but one grain of gold, consisting of 43 links, and having fastened this to the before mentioned lock and key, he put the chain round about the neck of a flea, which drew them all with ease. All these together, chain and flea, weighed only one grain and a half.

Oswaldus Northingerus, who was more famous even than Scaliot for his minute contrivances, is said to have made 1,500 dishes of turned ivory, all perfect and complete in every part, yet so small, thin and slender, and all of them were included at once in a cup turned out of a peppercorn of the common size. Johannes Shad, of Mitelbeach, carried this wonderful work with him to Rome, and showed it to Pope Paul V., who saw and counted them all by the help of a pair of spectacles. They were so little as to be almost invisible to the eye.

Johannes Ferrarius, a Jesuit, had in his possession cannons of wood, with their carriages, wheels and other military furniture, all of which were also contained in a peppercorn of the ordinary size.

An artist named Claudius Gallus made for Hippolytus d'Este, Cardinal of Ferara, representations of sundry birds sitting on the tops of trees, which, by hydraulic art, and secret conveyance of water through the trunks and branches of the trees, were made to sing and clap their wings, but at the sudden appearance of an owl out of a bush of the same artifice, they immediately became all mute and silent.

Dr. Oliver gives an account of a cherry stone on which were carved 124 heads, so distinctly that the naked eye could distinguish those belonging to popes and kings by their mitres and crowns. A Nuremburg top maker inclosed in a cherry stone, which was exhibited at the French Crystal Palace, a plan of Sebastopol, a railway station, and the "Messiah" of Klopstock.

Myrmecide wrought out of ivory a chariot with four wheels, and as many horses, in so little room that a small fly might cover them all with her wings.

Peter Bayle, a clerk of chancery in the time of Queen Elizabeth, once wrote the Lord's Prayer, the creed, the commandments, two prayers, and his own name and office, in addition to the year, month and day of the Queen's reign, in characters so small as to be enclosed in the head of a ring, which ring was afterward accepted by the Queen, and was worn on the august finger.

We have Pliny's statement that in his time there existed a copy of Homer's "Iliad" small enough to go into a nutshell, and a German, Professor Schreiber, produced only a few years back, by the stereographic process, a copy of the German translation, extending to 600 pages, of both "Iliad" and the "Odyssey," so small that a nutshell held the whole comfortably.

A New Market for Hardware.

Visiting a Birmingham brass foundry a short time ago, the writer was shown some brass door fittings of massive size and costly design, which he was informed were intended for a new palace in Siberia. Some idea of the extent and cost of the palace may be gleaned from the fact that the door and window fittings and other brass work for one wing only totalled £1500. Siberia is a great market of the future. The building of the great Siberian railway, 4800 miles in length, is proceeding vigorously, and the opening of the line from end to end is expected to take place in the fourth or fifth year of the new century. Meanwhile portions of the line are being opened for traffic, and this fact, together with the free colonization of Siberia and the temptations held out by the Government of Russia, has induced vast numbers of the peasants to settle in the fertile plains of Irtish and Obi. The promise of cheap railway fares, and the offer of forty-three acres of Crown land to each settler, tempted in May last year 100,000 immigrants from the congested parts of Great and Little Russia, and the inrush this year is expected to be still more considerable.—*Hardwareman.*

The Venetian government was the first civilized power to use powder, and they employed the first cannon in the battle of Chioza, in 1318.

THE CLIPPER OUR IMPROVED LAWN MOWER.

Light, more **durable and less liable** to get out of order than those now in general use. Nothing escapes the grasp of the Pioneer, weeds, dandelions and plantains being cut as closely and evenly as grass. Only requires the same power to cut grass two feet high as it would to cut two inches, and cuts more closely in the mowing of irregular surfaces and spaces, such as between posts of fences, walks and shrubbery. The Clipper Mower is not analogous to other lawn mowers, as it does not roll down the grass preparatory to cutting it; the finger bars and fingers thereon of the mower, gather in the grass in nearly an upright position, and the vibration or reciprocating motion of the knives shears off the grass with uniformity. **There is no use for sickle or shears where the Clipper is used.** For descriptive Circulars and Prices address the makers.

It will be continued under the same name and at the same location.

Business Maxims.

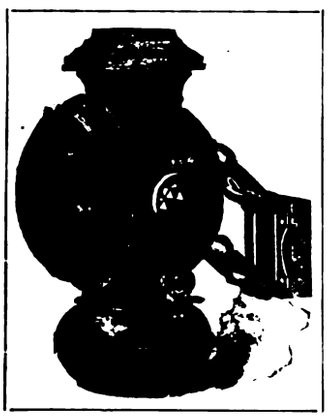
A Western business house has adopted the following pungently expressed rules for its employes. They will be found suggestive for retailers in any line:

Keep your eyes on the front door. Customers should be waited on promptly and pleasantly.

Salesmen when disengaged will take positions near the front door instead of the back. Customers do not come in at the rear.

Don't stand outside the front door when at leisure. It is an excellent notice to competitors and customers that trade is dull.

If you know of an improvement of any kind suggest it at once to the manager, and it will be impartially considered.



Employes are requested to wear their coats in the store. It is not pleasant for a lady to have a gentleman waiting on her in his shirt sleeves or with his hat on.

Clerks when on jury duty have the privilege of turning in their fees or having the time absent deducted from their wages. Drawing salary for their services, the company is entitled to their time or its equivalent.

Keep mum about your business. Always have a good word to say for it and never say it is dull. Keep your eyes and ears open about your competitors.—*Exchange.*

Told by a Traveler.

This story is told by a commercial traveler of the Grand Trunk Railway in Canada, which is said to be still a little rough: "We were bounding along," he said, "at the rate of about seven miles an hour, and the whole train was shaking terribly; I expected every minute to see my bones protruding through my skin; passengers were rolling from one end of the car to the other, but I held on firmly to the arms of my seat. Presently we settled down a bit quieter—at least, I could keep my hat on, and my false teeth stopped coming out. There was a quiet looking man opposite me. I looked up with a ghastly smile, wishing to appear cheerful, and said: 'We seem to be going a little smoother, I see.' 'Yes,' said he, 'we're off the track, now.'"

A Fatal Key.

About the year 1600 a stranger named Tebaldo established himself as a merchant in Venice. Soon becoming infatuated with the daughter of one of the most ancient and wealthy families he asked her hand and was rejected, the young lady being already affianced. Half crazed and thoroughly enraged, he planned revenge. Being an excellent mechanic he soon evolved a most formidable looking key. The handle of this unique weapon could be easily turned. Being turned it disclosed a spring with a missile in the shape of a needle of exquisite fineness. With this weapon Tebaldo waited at the church door until the maiden he loved passed in on the morning of her marriage.

When the bridegroom appeared the desperate lover, unperceived, sent the slender poisoned needle into his rival's breast, and within an hour he was dead of a "strange, baffling disease." Again Tebaldo demanded the hand of the maiden, but was refused. Within a few days both her parents had died in a very mysterious manner. Suspicion being excited, examination was made, and the small steel instruments found in the flesh in both cases. One day the maiden allowed Tebaldo an audience, but told him that she would never be his bride. Within an hour she was a corpse. Tebaldo was suspected, the key was discovered and the culprit hanged. The celebrated "key of death" is still shown to the curious visitor of the Venice Museum. —*St. Louis Globe Democrat.*

A philanthropist once engaged in conversation the daughter of a wealthy manufacturer who employs hundreds of men, and, taking a great interest in the welfare and advancement of the poor workingman, asked her if she never did anything for her father's hands? "No," was the reply, "but I rub mine with glycerine and oatmeal every night."—*Industrial World.*

The New Catalogue of Monarch Cycles.

Among the many elaborate and handsomely illustrated catalogues made possible by the modern methods of bicycle advertising, there are few this season more strikingly interesting than the one just issued by the Monarch Cycle Mfg. Co., Chicago, Ill., and No. 83 Reade Street, New York. It is the sixth annual catalogue of this progressive and successful company, and is a specially artistic creation in the way of catalogue construction, being a small quarto 8x7 inches in size, embellished with a cover in imitation of embossed bronze exceedingly modern in its conception, treatment and execution. Among its contents, in addition to the technical description of the many models of cycles produced by them, and of their varied equipment, etc., will be found a number of very artistic and appropriately colored portraits of some of the leading artists of the dramatic profession and of the office staff of the Monarch Co., all of them engaged in the pleasant occupation of riding some one of the many productions of this noted company. Among the portraits presented we noted the following: Georgia Cayvan, Margarette Mercer, Loie Fuller, W. H. Crane, Frank Daniels and Walter Jones. Representing the Monarch staff are Bliss and Lumsden, who are the managers of the Chicago retail salesrooms; W. J. Mead, the manager at the factory, and Tom Monarch Cooper, who leads the procession of speed makers. The likenesses are remarkably good, and form an interesting feature of this otherwise unique catalogue.

The manufacturers state with some degree of pride that "in issuing our sixth annual catalogue, we give further evidence of the spirit of progression which has characterized us since the inception of the business, in that our new models are nearer perfection than ever, the best the trinity of mechanical skill, excellence of material and the finest equipped bicycle factory in the world can produce.

"We offer a pair of entirely new machines, Models 46 and 47, list $100, containing no parts used in our 1896 production. On these wheels we stake our reputation, believing that their many new and thoroughly tested mechanical features will render them the most popular bicycles in 1897. In our Models 44 and 45, list $75, we give exceptionally good values, possessing all of the qualities of the average $100 bicycle. In addition to these, we offer a pair of tandems at $150 each, a racer, Cooper Special, at $125, and a road racer at $100. We have also a pair of medium-price machines, Defiance, at $60—cheap only in price—and two pair of juvenile wheels at $40 and $50."

The Dangler Stoves.

The Dangler Stove & Mfg. Co., Cleveland, Ohio, report a good season for their special line of goods. As the trade knows, they make three distinct lines of cooking and heating stoves, viz.: the Gasoline Vapor and Evaporating Stoves of every description; the Blue Flame Oil Cook Stoves and Ranges of every description, and also a large line of Gas Stoves and Ranges. Their trade extends all over the United States, and as gas for fuel for domestic purposes is increasing rapidly, especially in the larger cities, the gas companies find it to their interest to increase the output of gas and make such prices for fuel purposes so that it is as cheap, if not cheaper, than to use either coal or wood, while it is very much more convenient and labor-saving than any other fuel. While the interest in the gasoline vapor and evaporating stoves, as well as the blue flame stove has not in any way been affected by this increased use of gas, as that class of stoves has never been used to any extent in the larger cities, but generally in the smaller towns and country, so the demand for those goods is not materially affected. Oil and gasoline can be obtained at any cross-road grocery through the United States, at a price that is, in many cases, cheaper than any other kind of fuel. While the Blue Flame Oil Cook Stove is comparatively new, it is very popular, which is largely due to the fact that the heat is greater than the ordinary illuminating oil, while the consumption is less, and the quality of oil is immaterial.

Clipper Lawn Mower.

Special attention is called to the notice and illustration of the Clipper Lawn Mower shown on page 35 of this issue. This article is being manufactured with great success by the Clipper Lawn Mower Co., Norristown, Pa. The points of advantage to which attention is specially called by the manufacturers are stated as follows: "The Clipper is light, more durable and less liable to get out of order than those now in general use. On account of the simplicity of construction, nothing escapes the grasp of the Clipper, weeds, dandelion and plantain being cut as closely and evenly as grass. The height of the grass is immaterial to the Clipper, as it only requires the same power to cut grass two feet high as it would to cut two inches, and cuts more closely in the mowing of irregular surfaces and spaces, such as between posts of fences, walks and shrubbery. The Clipper Mower is not analogous to other lawn mowers, inasmuch as it does not roll down the grass preparatory to cutting it; the finger bars and fingers thereon of the mower, as it progresses, gather in the grass with a degree of uniformity in nearly an upright position, and the vibration or reciprocating motion of the knives shears off the grass with a degree of uniformity. In introducing the clipper to you, we wish to impress upon your minds that there is no use for the sickle or shears where the Clipper is used."

HARDWARE costs only One Dollar a year.

The President of the United States.

What the President of the United States Thinks About Our Enterprise.

William McKinley addressed the Convention of The National Cash Register Company, at Dayton, Ohio, October 22, 1895.

"It gives me great pleasure," he said, "to meet you here, and to congratulate you upon the splendid enterprise in which you are engaged.

"I have known The National Cash Register Company for many years. I have known the splendid progress of that industry in the past, and my only wish for you is that the business of this country from now on may be such that there will be a great demand for your cash registers, and that we will be able to register more cash than ever before in the transactions of this state and the country at large.

"What we want, no matter where we live and no matter in what occupation we may be engaged, is the highest prosperity possible for our country, and whatever will secure such prosperity, no matter what it may be."

The Secretary of State.

What the Secretary of State Says About Our Work.

On Saturday, October 24, 1896, Hon. John Sherman addressed the International Convention of The National Cash Register Company. He said:

"It gives me great pleasure to address an assembly of this kind upon whose faces are written intelligence, ability and integrity. Our country is made greater by the progress and strength of its industries. And among these industries none has a better reputation for integrity and strength than The National Cash Register Company.

"You people are engaged in a very great work—properly taking care of their cash for retail merchants. If the cash is right everything else will be right.

"There is plenty of cash in this country, and if it is well taken care of and properly handled the cry of hard times will be heard no longer."

John Wanamaker.
Twenty National Cash Registers in use in his Philadelphia Store.

What the Retail Merchants of the World Say About National Cash Registers.

We are proud of this indorsement by the president of the United States and by the secretary of state, but we are prouder still of the indorsements of our company and of our registers by more than one hundred and fourteen thousand retail merchants throughout the civilized world who have purchased registers from us and are now using them.

We have testimonials from thousands of these merchants, and to any retailer who desires we shall be glad to send copies of letters written by merchants in his line of business who reside in his immediate vicinity.

Send us your name, address, business, number of clerks in your store, and state whether or not you employ a cashier. We will send you in return, free of charge, a handsomely-printed description of a cash register system used in stores like yours. You place yourself under no obligation to buy. Address Dept. H, The National Cash Register Company, Dayton, Ohio.

It is a Fact

That unless a Refrigerator is built on scientific principles it is nothing short of a stench-box, an ice-waster and a food destroyer. Typhoid and cholera infantum have been known to originate from the so-called "best made" Refrigerators.

Read's "Odorless" Refrigerator

Patented July, 1895, March, 1896.

Is a scientific preserver of food. The air circulation is so perfect that *One Dish Won't Taste of Another, a Great Ice-Saver, Needs No Washing Out.* It is endorsed by Mrs. Sarah Tyson Rorer, Principal of the Philadelphia Cooking School, and by the highest medical authorities.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Bridgeport, Conn —The Union Brass Co. has been incorporated with a capital of $300,000, to acquire the plant of the Aluminum Brass & Bronze Co. of this city. The incorporators are: F. J. Kingsbury, of Waterbury, and W. H. Male and F. Kingsbury Curtis, of New York City.

Cincinnati, Ohio.—J. B. Doan, until recently the manager of the Chicago branch house of the Davis & Egan Machine Tool Co., has purchased the Chicago store and business and will hereafter conduct the establishment under his own name. Mr. Doan has been identified with the iron working machinery trade for about 12 years. Besides the tools manufactured by the above named company he will handle several other makes and a variety of second-hand machine tools.

Fremont, Ohio.—For several weeks past rumors of a new shear factory in this city have been ripe. George F. Behm, of Bloomville, Ohio, was in the city conferring with local capitalists to secure a location for new shear factory. It is claimed that a number of local capitalists have already subscribed $30,000, and that the indications are that a new factory will soon be an assured thing in this place.

Kalamazoo, Mich.—It is understood that the Hatch Cutlery Co.'s plant, now located at Buchanan, will be sold to Kalamazoo parties, who will continue the business under the form of a stock company. Frank Fuller, of Kalamazoo, will probably take the management of the business. H. B. Peck recently went to Buchanan to look the matter over, and it is not at all improbable that a big slice of the stock will be over his signature. H. H. Everard will be interested in the company. Mr. Miller, who for the past two years has been the manager of the business, will also take an interest. The Kalamazoo Cutlery Co. will probably be the name of the new enterprise.

St. Louis, Mo.—Jas. Sweeney and others have incorporated the Jas. Sweeney Copper & Brass Works with a capital stock of $50,000.

Improved Conditions.

Baltimore, Md.—The works of the Maryland Steel Co., at Sparrows Point, Md., will start up all departments, giving employment to over 2000 men. The works have been shut down four years. With all the furnaces in operation, the Maryland company has a capacity of producing 1200 tons of iron daily. The steel rail mill of the company is also being fitted up and will be ready for operation by May. It closed down in 1894. It has a capacity for making 1200 rails per day.

Belvidere, N. J.—The State Board of Taxes has handed down its decision in the disputed assessment of the Oxford Iron & Nail Co. The big plant was assessed for $369,000, and the company wanted it reduced to $170,000. The board finally decided to make the assessment $274,000.

Benwood, W. Va.—The Riverside Iron & Steel Co. will erect a new plate mill.

Canton, Ohio —The Canton Pump Co. has prospects of a busy season. C. M. Miller recently returned from an eastern trip with a number of orders for the product of his plant. As these pumps are furnished to manufacturing establishments, Mr. Miller regards the placing of these orders as an indication of renewed activity in manufacturing lines. The Canton Pump Co. was recently authorized to increase its capital stock from $5000 to $50,000.

Chicago, Ill.—The Vulcan Iron Works, Milwaukee Avenue and Clinton Street, have certified to an increase of capital stock to $350,000.

Cincinnati, Ohio.—The Davis & Egan Machine Tool Co. have just received a large order from Stockholm, Sweden, for some forty machines, amounting to about $22,000; also a large order from Sheriff, Swingley & Co., of Johannesburg, South Africa.

Cincinnati, Ohio. — Fosdick & Plucker, manufacturers of machine tools, at No. 616 Culvert Street, have turned the firm into a corporation under the name of the Fosdick Machine Tool Co., with William T. Fosdick as president and general manager, he having acquired control of the establishment, Mr. George Plucker, the junior partner, retiring from the business.

Detroit, Mich.—J. E. Bolles and F. F. Snow have formed a partnership under the name of the J. E. Bolles Iron & Wire Works, with a factory at Fourth and Porter Streets, and an office in the Peninsular building.

Dickerman's Corners, Conn.—A Hartford manufacturer is negotiating with Mrs. E. J. Smith, of Hartford, for the purchase of the Brand factory at this place, formerly occupied by the Ellrich Hardware Co. The factory is supplied with good water power and well situated for manufacturing business.

Lebanon, Pa.—The Pennsylvania Bolt & Nut Co. intend erecting a large addition to their plant at once.

Nashville, Tenn.—F. E. Myers & Co. Ashland, Ohio, have made an application for space at the "Tennessee Centennial," and propose to reproduce their renowned World's Fair exhibit and their "old man and agent" caricature, mounted on a pedestal and run by an electric motor. A display of a full line of their goods will cover a space of about 500 square feet. Their general agent, A. P. Church, will be in charge.

East Douglas, Mass.—Parties are negotiating for land near the railroad depot, for the purpose of building an axe factory in town. There have been many rumors regarding new axe works of late, and there appears to be some foundation for the talk, although nothing definite can be learned as yet.

Erie, Pa.—The Lovell Mfg. Co. will make an addition to its plant.

Holyoke, Mass.—The Seymour Cutlery Co is considering the building of a new mill and it may locate in Willimansett. The company is managed by S. R. Whiting, and more room is needed for the business that is being done by the concern, and there is a large rental to pay to the water-power company. The company has been offered several sites on which it could build.

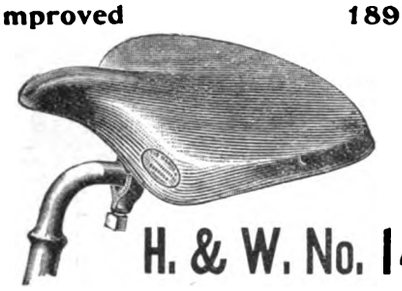
Pawtucket, R. I.—Considerable new machinery has been put into the American File Co.'s works on Dexter Street. It is the intention of the management to put in a boiler in a short time.

Pittsburg, Pa.—The National Tin Plate Co., of Anderson, will at once erect an additional mill at this place. The present freight rate makes it impossible for Western tin plate manufacturers to compete in eastern markets with eastern manufacturers. This will give them an eastern and western source of supplies. They will expend $200,000 in building the new plant. About 500 men will be employed.

Wheeling, W. Va.—The La Belle Iron Works contemplate the erection of a new tin plate mill to employ 200 men.

Recent Embarrassments.

New York, N. Y.—Justice Smyth of the Supreme Court, recently appointed John C. Chamberlain ancillary receiver for the Ives & Williams Co., manufacturers of toys and novelties, at No. 682 Broadway, this city, and Bridgeport, Conn., in proceedings for a voluntary dissolution of the corporation. The liabilities are reported to be about $23,000. Mr. Chamberlain was previously appointed receiver for the company in Bridgeport.



St. Paul, Minn.—The St. Paul Plow Co. has made an assignment. The company was principally owned by William Dawson and its assignment was a foregone conclusion. The assignee is Charles M. Power, and the deed of assignment is signed by Samuel E. Dawson, vice-president, and F. R. Flanagan, secretary. Mr. Dawson makes affidavit that the assets of the company are not worth to exceed $100,000, and the assignee's bond for $200,000, signed by the National Surety Co., was approved by Judge Brill. The liabilities of the company are unknown at present. In the statement of William Dawson, published in the *Pioneer Press* some weeks ago, he said that he was indorser on $300,000 worth of the company's paper.

Recent Fires.

Middletown, Conn.—The plant of the W. H. Chapman Co., manufacturers of saddlery Hardware, at South Farms, was destroyed recently, causing a loss of $50,000; insurance, $30,000.

Meriden, Conn.—F. L. Buell & W. F. Kennedy will open a store, Room 9, Wilcox Block.

Middletown, Conn. — The Mills Bicycle Bell Factory stockholders held a meeting recently, and elected the following directors: Wallace K. Bacon, Lyman D. Mills, W. S. Wetherbee, Conrad G. Bacon and Norman T. Mills. The capital stock is $8000.

Milwaukee, Wis.—The Milwaukee Engineering Co. are manufacturing bicycles for the jobbing trade. Their factory, which is at Nineteenth Street and St. Paul Avenue, is equipped for the production of 10,000 wheels annually.

Milwaukee, Wis.—The Sphere Mfg. Co. has been incorporated by W. H. Boetcher and others, to manufacture bicycles and unicycles. Capital stock, $100,000.

Nevada, Mo.—R. B. Taylor, sporting goods, will open a new store this month.

New York, N. Y.—The Frost Gear Case Co. has been incorporated by Warren H. Frost and others to manufacture gear cases etc. Capital stock, $60,000.

New York, N. Y.—The Pederson Cycle Co. opens new store at No. 292 Eighth Avenue.

Niles, Mich. — The Matthews Bicycle Works have just opened an estsblishment at this place.

Northampton, Mass.—Lewis Warner has opened new store for his bicycle business in the Todd Block.

Norwich, Conn.—The Cadden Cycle Co. have opened new store at No. 31 Broadway.

Philadelphia, Pa.—Janney & Steinmetz, bicycle tubing and bicycle parts, have opened salesroom and branch office at No. 1015 Arch Street.

Philadelphia, Pa. — Moreau Lieber has opened a bicycle department at Nos. 1213 and 1215 Market Street.

Pottsville, Pa.—Francis Crone, who for some time past has been manufacturing bicycles in a limited way, has leased the three story building on Third and Norwegian Streets, and will fit it up with the necessary machinery for largely increasing his product.

Rutland, Vt.—The Coolidge Cycle Co. will open new store on Centre Street.

Salisbury, N. C.—Gregg & Co., Hardware, sporting goods, bicycles, etc., have opened new store.

San Marcos, Tex.—The San Marcos Mercantile Co. has been incorporated to deal in bicycles and all lines of Hardware and plumbers' supplies.

South Royalston, Mass. — Harry Beals has taken the agency for the "Rambler" bicycle.

Springfield, Mass.—Elisha Knowles has opened a new store at No. 280 Main Street.

St. Albans, Vt.—J. V. Montefiore will erect new building on North Main Street, and open a bicycle livery this summer.

St. Joseph, Mo.—The Wyeth Hardware & Mfg. Co. have opened a new retail department at Nos. 105 and 107 South Third Street.

Wallingford, Conn.—R. E. Badger & Co. New store in Fahey's Building.

Washington, D. C.—The Tiger Cycle Co. has been incorporated by John S. Beach, local agent, and Aaron W. Fitzer, president, to buy, sell and repair bicycles. Capital stock, $50,000.

Westfield, Mass. — L. L. Fowler opens new store.

Worcester, Mass.—The Lemont & Whittemore Cycle Co. have opened a new store at Nos. 663 and 665 Main Street.

York, Pa.—E. A. Sultner opens a new store at No. 306 West Market Street.

Changes and Improvements.

Delavan, Wis.—F. A. Parrish, sporting goods, reported to have been succeeded by C. A. Clark.

Dubuque, Iowa.—Herancourt & Whelan reported to have dissolved.

Griggsville, Ill. — Ludlow & Ferrand, sporting goods, etc., have dissolved. F. H. Ferrand will continue the business at the old stand.

Houston, Tex.—Roy Spore, bicycle supplies, etc., reported sold to Grant & Pearl.

Lyons, Ind.—R. S. O'Haver, sporting goods, etc., has been succeeded by O'Haver & Bailey.

San Diego, Cal.—G. W. Burns, formerly of the Coronado Cyclery, and E. A. Miller have established a new cyclery.

Stamford, Conn. — C. Ford Seeley reported to have been succeeded by Seeley & Adams.

Recent Embarrassments.

Des Moines, Iowa.—Perkins & Perkins, failed. Liabilities, $13,000; assets about three times that amount, principally real estate.

Little Falls, N. Y.—Homer P. Snyder, successor to Snyder & Fisher, bicycle manufacturers of this city, has made a general assignment to Olin W. Timmerman for the benefit of his creditors. This action was precipitated by the failure of a house in Boston and two other dealers. The liabilities and assets are unknown. The general belief is that a final settlement will be promptly made and business resumed in ten days. One hundred and twenty-five men were employed.

Washington, Ohio.— Portsmouth Wheel Co. made an assignment. The liabilities are about $35,000, with assets about the same.

Recent Fires.

Reading, Pa.—A fire in the plant of the Acme Bicycle Works did damage to the extent of $75,000, on which there is an insurance of $50,000. The firm employed nearly 450 hands, divided into night and day forces. The fire was discovered in the enameling department, which contained coloring fluids and other combustible materials. The machinery in the plant cost $50,000, the buildings $75,000, and there was $125,000 worth of material on hand. Some of this was damaged. The firm was turning out 200 wheels every twenty-four hours. An examination showed that very little injury was done to the engines and electric motors and some machinery in the plant. An immediate contract was awarded for the reconstruction of the main building, and the works will be resumed in every department not affected by the fire.

Bells.

The belle of the ball on her escort leaned,
And so very happy the dear girl seemed,
That he took her aside to a cozy retreat
And told her the story that's always so sweet.

She perked up her lips, so enticing and fair,
And his own were reaching the heaven that's there,
When she said, "Dear boy, this is only a sell.
You'll first have to buy me that 'Climax' bell."

The new 1897 model "CLIMAX" Bell possesses without doubt the most improved Lock Clamp known. Can be adjusted to the Handle Bar quickly without removing the screw, thus saving all vexatious worriment in the operation, and at the same time presents a more attractive appearance than any other kind of an attachment.

We have just published a handsome little booklet to be carried in the vest pocket, containing lots of valuable information for the benefit of wheelmen. Send us a two-cent stamp and we will mail you a copy.

To Bicycle Riders.

WE MAKE OUR TUBE
OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted]

and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

"An Excellent Medium for Advertising."

Peerless Mfg. Co., Cleveland, Ohio. [*Bicycles*]: There is no question but that the Hardware trade is becoming a very large factor in the bicycle line. The two lines can be handled nicely together and, as a rule, a Hardware dealer has sufficient capital to add a cycle department, without danger of doing injury to his regular line. While again, few concerns have more visitors to their stores than the average Hardwareman, and this alone is a standing and effective advertisement for the bicycle that he may carry. We can see no reason why HARDWARE should not be an excellent medium for advertising.

"Replies From All Sections."

McIntosh-Huntington Co., Cleveland, Ohio. [*General Hardware and Bicycles*]: As an advertising medium, we have recently had occasion to test HARDWARE in a manner that would give us some idea as to how successful it can be used. Our advertisement did not occupy a very prominent position, but was of a character to excite the cupidity of the reader. We found that within two days after your paper came out, we commenced to receive replies from all sections of the country to the advertisement. This would seem to be sufficient proof that yours is a good medium.

"SATISFACTORY RESULTS ON INVESTMENT."

Aladdin Lamp Co., Newark, N. J. [*Bicycle Lamps*]: We think that the Hardware trade is one of the best to handle the side line of bicycles and bicycle sundries, as it seems to be in perfect keeping with the other lines of goods which are kept in stock. We are also of the opinion that the trade will, in time, be controlled by a very few exclusive stores, and a large number of Hardware and carriage warehouses, where the bicycle can be sold at a legitimate price as a side line. Regarding HARDWARE it has always given us satisfactory results on i vestment made.

CRONK'S

Combination Fencing Plier.

This newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same heft as the 1½ Maydole Hammer, and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12 00. Dis. . . .

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

Patentees and Sole Manufacturers,

TROY NICKEL WORKS,
TROY N. Y.

ALASKA STOVE HARDWARE.

"CANNOT FAIL TO HELP OUR BUSINESS."

J. C. Tanger & Co, Hanover, Pa: Please find $1 enlosed for one year's subscription. After examining a specimen copy, we think it one of the best, and that it cannot fail to help us in our business.

"READS ADS. AND ALL."

Fred. A. Welles, Milwaukee, Wis.: I like your paper first rate, and I read the advertisements as well as the rest.

"IMPROVES AS IT GROWS OLDER."

Geo. P. Crans, Brooklyn, N Y.: HARDWARE improves in quality as it grows older. I am well pleased with it.

"OF INTEREST TO LIVE DEALERS."

Van Voorhis & McNair, Crawford, Neb.: We like the journal very much. It always comes to our desk full of bright, sound matter, that cannot but be of interest to all good live dealers.

"EXPERIENCE MOST SATISFACTORY."

Partrick & Carter Co., Philadelphia, Pa. [*Electrical Goods*]: Our experience as advertisers with you has been of a most satisfactory character.

"TOO VALUABLE TO BE WITHOUT."

Charles T. Mitchell, Baltimore, Md.: HARDWARE is too valuable to be without.

THE OLDEST AND LEADING MANUFACTURERS OF GALVANIZED WIRE GOODS IN AMERICA.

The Winner.

The Race is Run, and we have "The Winner"

and we know it, because we have sold more screens up to the present time than any previous year, and the amount of your sales on Adjustable Window Screens and Screen Doors depends on how many you can handle of our line. We have more different styles than any other manufacturer or dealer in the United States. We do not keep these screens, we sell them. Send for Catalogue. . . .

Non-kink

Like most useful articles, is simple in construction—a short piece of ¾-inch hose with coiled wire embedded in the walls. Literally impossible to kink it—attach one end to hydrant, the other to hose, and try. **No matter how you haul the hose about, there is always a full flow of water. This is one point—the other is Non-kink practically doubles the life of the hose.** How? By relieving it entirely from the strain at the point of attachment to hydrant. All the rest of the hose is movable, and gives when pulled about. The end fastened to hydrant is immovable, and the entire pulling strain is practically concentrated at that point. **Non-kink** assumes this strain, and, being strengthened specially for the work, performs it without injury.

CRONK'S

Combination Fencing Plier.

This newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same heft as the 1½ Maydole Hammer, and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12.00. Dis. . . .

"Happy Thought" Tack Puller.

Patented.

Made of polished steel. Will pull all size tacks, and the construction and shape makes it easy to pull the tack without breaking the heads off. The bottom hook which serves as the lever in drawing the tack is also convenient to lift the carpet from the floor. One trial will prove that the "Happy Thought" is the best. The price, 10 cents brings it in reach of all. For sale by all leading Hardware dealers. This is a fine seller, and we will send a sample to the trade on receipt of a two-cent stamp. Manufactured by the

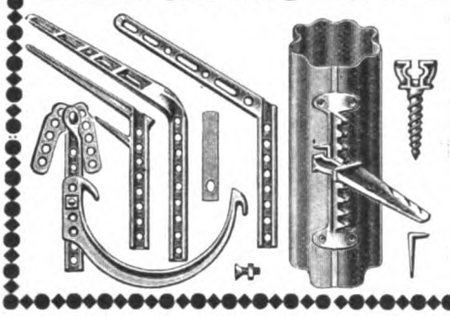
"EVERYTHING IS COMING UP."

BUSINESS IS BETTER AND THERE WILL BE A LARGER DEMAND THAN EVER FOR OUR

Sheep Skin Mitten.



Acknowledged to be the best article for polishing stoves, as it does away with the old time dirtiness of the work, making this work a pleasure. Also invaluable for polishing brass or glass, or silverware, which it does not scratch. For tan shoes and cleaning bicycles it has demonstrated itself a conspicuous success.

A MODEL CAN OF VARNISH.

The handsomest and most attractive can of varnish ever put on the market is being sold by the Glidden Varnish Co., of Cleveland, Ohio, who are one of the most enterprising and progressive varnish manufacturers in the country and the first varnish house to offer a high grade of varnish at an advertised low price, to be sold only in sealed cans, protecting the painter so that he may know that he is getting a standard grade of varnish, and just what it is going to cost him.

These varnishes are called M. P. Special Coach Varnish and M. P. Special Spar Varnish. The former is to be used on interior work and the latter on exterior work. The advantage of using both of these varnishes is that they can be left in the gloss finish or rubbed with either water or oil and pumice stone, giving much better results than the old-fashioned hard oil finish, as they produce a very elastic and durable finish and will not bloom. Both of these varnishes are put up in handsome cans with the label lithographed on the tin so that they cannot rust out or peel off, thus giving the dealer a can of varnish that will always look bright and nice, as the label can be washed off with soap and water and not be injured. These cans are also equipped with the new fulcrum cap and nozzle with inner seal, so that when the seal is broken the can has an air-tight cap, thus keeping the varnish in good condition and preventing evaporation.

Dealers should lose no time in putting in a stock of these varnishes, as they will sell on sight and they offer a liberal discount to the dealers, as they want them to act as distributing agents for both these specialties. The retail prices are as follows: M. P. Special Coach Varnish, in five-gallon cans, $1.25 per gal.; in one-gallon cans, $1.40 per gal. M. P. Special Spar Varnish, in one-gallon cans, $3.50 per gal.; in half-gallon cans, $1.90 each; in quart cans, $.95 each; in pint cans, $.50 each.

Grand Combination for 1897.

GASOLINE, OIL & GAS.

Unequalled for Economy, Utility and Convenience.

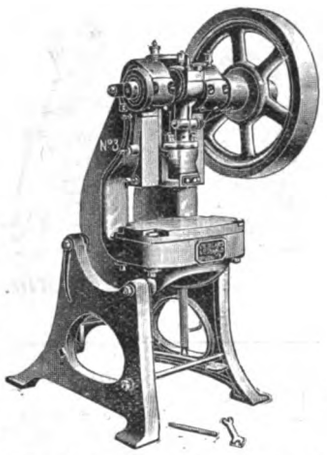
Gasoline Stoves and Ranges.

A full and complete line of Single, Individual, Generating and Evaporating Stoves and Ranges of every style, including our celebrated "Gem" line, which on account of quality, style and price are to-day the most popular, economical, labor-saving Vapor Stoves ever put on the market. Also a full line of Stationary, Lay-down and Removable Tank Junior Stoves.

Blue Flame Oil Stoves

Which are to-day recognized, by all who have given them a thorough and competitive test, as having more real merit than anything in this line heretofore attempted, or likely to be in the future; and for perfect workmanship, durability, simplicity and quick-lighting, they have no equal. We make them in eleven different styles.

Gas Ranges and Stoves.



For artistic design, combining all the latest improvements, both in burners, ovens, and valves; made both with steel or cast-iron bodies, drop or swing doors, and constructed with a view of economy in fuel, with quick and perfect work, with the best of material and workmanship, stand to-day unequalled.

We would suggest to all who are interested in securing the best in either Gasoline, Blue Flame Oil Stoves, or Gas Ranges and Stoves, that it will be manifestly to their advantage to inform themselves of what is in the market before placing their order for the coming season.

Catalogues of each of the different lines will be sent on application.

THE CLEVELAND LAWN WEEDER CO., 612 New England Bldg., CLEVELAND, OHIO.

THE CLIPPER OUR IMPROVED LAWN MOWER.

Light, more durable and less liable to get out of order than those now in general use. Nothing escapes the grasp of the Pioneer, weeds, dandelions and plantains being cut as closely and evenly as grass. Only requires the same power to cut grass two feet high as it would to cut two inches, and cuts more closely in the mowing of irregular surfaces and spaces, such as between posts of fences, walks and shrubbery. The Clipper Mower is not analogous to other lawn mowers, as it does not roll down the grass preparatory to cutting it; the finger bars and fingers thereon of the mower, gather in the grass in nearly an upright position, and the vibration or reciprocating motion of the knives shears off the grass with uniformity. There is no use for sickle or shears where the Clipper is used. For descriptive Circulars and Prices address the makers.

HARDWARE

VOL. XV. APRIL 25, 1897. NO. 2.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: CHICAGO, - - - - ASHLAND BLOCK.
BOSTON, - - No. 33 EQUITABLE BUILDING
CINCINNATI, - - - No. 316 VINE STREET.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The weather conditions becoming more settled as the season advances, has a noticeable effect upon the state of trade, increasing orders being the custom noticed in the business now reaching the jobbers and commission houses. A more encouraging feeling seems to pervade the retail trade, who are feeling sure for the first time this year, "there's a good time coming."

The prevailing tendency toward lower quotations in many lines, especially when a willingness to order liberally is manifested, often has an effect contrary to the one intended: as the prevailing belief of limited demand and large production makes it a conservative policy to let the manufacturers carry the bulk of the stock, which, under more rigid conditions would be lodged in the wholesalers' lofts or warehouses.

From all accounts, as compared with a year ago, business has increased in volume, and when reference is had to the records of the past year, the advancing amount of trade, of which evidence is noted, creates a feeling that the end of the memorable depression is within reach. The jobbers report that collections have favorably improved, and remittances and new orders come hand in hand.

Outside of seasonable specialties, the trade in general lines improves slowly. Mechanics' tools, which have been slow of sale for a long time, are now the subject of sustained enquiry, with prospects of a steady demand in the near future, when strikes shall cease to be a burden and the workmen shall all find work.

Prospects for builders' Hardware improve daily, although larger enterprises occupy the attention of the local architects rather than those of moderate extent. Prices continue low, and the style of product offered by competing manufacturers, while of modern excellence in general effect, the sales at present are apt to be confined to the extremes of low-priced goods for ordinary stock requirements, or highly artistic productions that may be specified for edifices of architectural note.

The elaborate programme now assuming national importance, laid out by the Grant Memorial Committee, will prove of sufficient attraction to bring a good many buyers to this city during the present week, the reduced rates offered by the railroads creating an extra inducement. Let us hope they will come with pockets filled with memoranda of wants to be attended to; new goods to be looked up; additions to their present assortments to be decided upon, and a number of other reasons why their expenses need not be charged up entirely to pleasure.

Changes in Mercantile Methods.

If some of the Hardware dealers now deceased, who were the leaders in mercantile enterprises 40 years ago, could be made aware of the expensive methods, small percentage of profits, and mammoth transactions that are to-day the features of their venerated industries, they would turn over in their graves and despair of the future.

Realizing by comparison how economical were their own views, how slow in the way of business detail, how prodigal in the expenditure of the poorly paid time of the individual employe, we feel there were no short cuts to prosperity believed in or permitted; conservative estimates placed a limit to speculative tendencies, and sufficient for each year was considered the customary profits thereof. Changes in current quotations on general Hardware were few indeed and rarely above a normal 2½ or 5 per cent., the terms of payment being anywhere from four to twelve months.

To-day, how different is everything; what an evolution is apparent; goods are retailed at profits on which by the old methods the dealer would have starved to death; and the present profit on wholesale transactions frequently is no larger than the five per cent. addition to the net cost by which the old merchants—who died as millionaires—considered a "marked cost" on which to base their profit. In the old days, simplicity and economy created merchants of quiet, intelligent aspirations, without the soul-harrowing strain which seems so natural now, in our desire to obtain wealth by modern methods. Simplicity and economy everywhere pervaded, extravagance was held in check, and a man wearing a silk hat while smoking a cigar and carrying a cane into a business house, would find such peculiarities made his credit questionable, and subjected him to a searching inquisition.

The principal stumbling block to getting back our business on a platform promising pecuniary rewards, is the fact that our national habits are grounded on a higher scale of ease and comfort, a state of indulgence we are loth to sacrifice, and to continue which seems impossible with profits in an inverse ratio to the amount of business transacted.

The result has been that the higher priced intelligence, always considered necessary to the successful prosecution of any business, has in many instances been compelled to give way; younger and less experienced men have grasped the helm of the ship, and when the breakers loomed up ahead, frequently found that judgment and nerve demanded by an emergency new to them, could not be picked up "off-hand," but

Digitized by Google

that the situation required treatment, the product only of a wise experieuce.

Bicycle Bells.

The attempt to limit the size of the bells which are now in use by the cycle riders throughout the country is a commendable one, for the big sleigh bells, inharmonious cow bells and engine gongs which are now alarmingly prevalent, ought to be frowned upon and suppressed by every admirer of a wheel, or lover of the horse whose nerves are shaken by these discordant noises.

The efforts of the consulates and associated cycling clubs which are being made for this laudable purpose, should not, however, make the mistake of going to the opposite extreme, which we find is suggested as a "2½ inch limit" to a cycle bell; this would not accomplish the purpose for which a bell is carried on a wheel, as a gong bell of the largest size suggested could be heard amid the constant traffic of a city but a few feet off, and with the coasting and scorching now so freely indulged in, especially in the suburban towns, the bicycle would be apt to reach the wayfarer before the sound. The limit should be placed at three inches, which would give a bell of resonant strength that would surely fulfil its purpose. A bell of 2½ inches or less presents the mechanical impossibility of giving a gong with sufficient metal in it to be strong and durable, and yet possess a vibratory power sufficient to develop sound. A tandem, it is universally conceded, should have a bell of greater power than a single, because a contact with one by a pedestrian is greatly to be avoided, and a larger gong is needed. The reason why so many small and inefficient bells are now in use is because price has been made more of an object in their purchase than consideration for the wayfarer; this, and a wish simply to comply with the letter of the law only instead of its spirit, and the craze for wheels of "no weight," so noticeable a few years ago, which has not been entirely eradicated. In Europe the popular bell is 2⅝ inches, and the cycle bells which we are exporting in very satisfactory quantities are of this size; the larger area of the gong enabling the maker to produce a bell in which the inside mechanism gives evidence of the American skill in construction. Even this size, 2⅝ inches, making it one-eighth of an inch only larger than the size now suggested by the movers of this reform, could be accepted as a compromise rather than the size referred to, for that one-eighth of an inch enables the use of an amount of metal which insures vibration and a tone that would command attention.

There is a world of wisdom for a business man, in a political maxim, credited to the late Samuel J. Tilden: "When you don't know *what* to do, *don't do anything.*"

"No," said the old Hardwareman, sternly, "I will not do it. Never have I sold anything by false representations, and I will not begin now." For a moment he was silent, and the clerk who stood before him could see that the better nature of his employer was fighting strongly for the right. "No," the old man cried again, "I will not do it. It is an inferior grade of shovel and I will never pass it off as anything better. Mark it 'A Shovel Fit for a Queen, and put it in the window. A queen does not have to do much shoveling."

Heard and Seen in the Trade.

The Bessemer process dates back to the fifties. The essence of this invention was the producion of steel from pig iron by the use of an air blast. A blast of air is forced through the molten cast iron so that the carbon and silicon contained in it are burned out, they forming the fuel. The converter in which the metal is treated by the Bessemer process is an egg-shaped vessel having a capacity of several tons, which is turned on its side to receive the charge and afterward brought into an upright position. Its bottom is full of holes, through which the air blast is forced.

The La Capital Co., Buenos Ayres, Argentine Republic, South America, have let contract for the materials for a power station aud the road bed and cars to parties in the United States. The Berlin Iron Bridge Co., East Berlin, Conn., have the contract for furnishing the skeleton steel work of the building and the roofs. The roof over the engine and dynamo room will be covered with corrugated iron lined with the Berlin Co.'s fire-proof anti-condensation roof lining. Taking into consideration the magnitude of the work and the distance it is to be shipped, it is to be considered a good recommend for the Berlin Co.'s roofing.

The Excelsior Supply Co., wholesale Hardware and supplies, have entered upon a jobbing business in Springfield, Mass. From the character of the men who have this establishment in hand, and the push they have already displayed in starting business, we feel free to congratulate New England upon the addition of another first-class and enterprising house. They will be glad to receive catalogues, etc., from manufacturers.

J. C. McCarty & Co., who have been for so many years located at No. 97 Chambers Street and No. 81 Reade Street, will on May 1st move to No. 10 Warren Street, New York, where their facilities for transacting business will be greatly improved, enabling them to carry fuller and more complete stocks of goods of the various manufacturing companies represented by them.

Almost without exception, the tin-plate works in this country are running full at the present time. It is calculated that mills having an aggregate productive capacity equivalent to fully 4,500,000 boxes a year are now in steady operation.

Surpless, Dunn & Co., will on May 1st move from their present location No. 11 Murray Street, to more commodious quarters at No. 55 Warren Street, New York.

The manufacture of horn combs is in the hands of a few firms only, and they guard with great zeal any attempts to discover their processes.

The city of Marseilles, France, has just completed its drainage system on the plan of that of Paris, at a cost of $7,000,000.

The term rice paper is misleading. It is not made from rice or the fibre of the rice plant, but from that of the bread-fruit tree.

The consumer is the storekeeper's judge, and whether or not the latter shall remain in business depends upon his verdict.

The largest check was one of $26,693,250, drawn on the Bank of England in payment for the Kimberly diamond mines.

Nearly 5000 persons are organized in the wood pulp and paper industry in Maine. The yield is about 12,000 tons a year.

The number of locomotives in the world is estimated to be 105,000, representing a total of 3,000,000 horse-power.

HE CALLED AT THE HARDWARE CLUB.

To the Editor of Hardware: Having been engaged in the Hardware business for nearly a half century, I have had many pleasant experiences of a social nature, when, upon occasion, I have been thrown into connection with my brethren of the trade.

I wish, however, to occupy a portion of your space, in stating that nowhere in my long pilgrimage through the Hardware world, have I found more pleasant greeting, or been surrounded by more hospitable environment, than was my pleasure to experience yesterday, when a guest of a leading member of the Hardware Club of New York.

Residing, as I do, some miles from the seashore, I was attracted, first, by the magnificent view from the club windows of New York lying at our feet; especially the glimpses that we had of the bright waters of New York Bay and its two rivers, lying sparkling under the bright April sun.

Almost as bright, and certainly as sparkling, was the cheerful recognition that beamed from the face of my dear old friend, Peter McCartee, the president of the club. I am told that from 12.30 to 2 P. M., it is the business and pleasure of Peter to flit from one table to another in the club room, shaking hands with his friends, and making his visitors feel in their heart every possible vibration and variation of that dear old song, "Home, Sweet Home." It is possible that Mr. McCartee finds time to eat his luncheon during these hours, but so far as I can learn from the members, no one has ever seen him occupy a table for five consecutive minutes. The few moments that he is anchored in his chair, are taken up with visits from the members of the club, who gather about him.

It is seldom that a countryman is permitted to enjoy a more attractive sight, than to see some four hundred business men and their friends, during the rush hour of each day, in this club. The white table linen, the cut glass, the silverware, and the bright sunshine which peers into every window, make the scene one of peculiar attraction; and when you come to the menu—the Lord preserve us from indigestion and give us our best hold upon our appetites whenever we visit this club!

At a central table, I saw my old and long-time friend, George Sargent. I do not know just how many years he carries, but whatever they are, he carries them well. At another table, I saw our friend, Hobart Weed, from far-off Buffalo, and they tell me that since he has established a branch office in New York city he has become more and more metropolitan in his looks, aspirations and business methods. As I do a great deal of business with Buffalo, I hope that Hobart will not outgrow himself, and all the rest of us, and become entirely New Yorkish.

I was introduced to a number of the officers of the club. I do not know upon what principle of natural selection these governors were picked out, from the great body of available material within reach of the club, but the casual eye of a stranger would suggest that it was largely upon their good looks. There is my friend, Bissell, with the silver hair and the youthful face; the aldermanic and poetical Walkley; the youthful and sprightly Van Glahn, and that Colossus of the club finances, friend Keating.

They tell me that the club has been most admirably managed since its inception, and that there has been only one change in the Board of Governors during that time, and that was caused by the death of the first president, W. H. Williams, and the election of his successor. The name of the new governor happens, for the moment, to have escaped my memory.

I wish we had a club of that kind up in our town. I do not see how it can be brought about. There are two Hardware stores besides my own, one of which is owned by a widow, and managed by her son, and the other is in the hands of a receiver; and I do not exactly see my way clear to the formation of a club, which should be composed entirely of myself, a middle-aged widow, of good looks, and a representative of the courts. I do not, however, see how any city of any size can get along without an organization of this character. I am told that a great many thousand dollars were required to fit up the Hardware Club in its present shape, and certainly no better investment was ever made by the Hardwaremen of New York.

If an organization of this kind had been proposed some thirty or forty years ago, and each member of the trade been compelled to go there under pentalty of death or loss of the elective franchise, each one would have slipped a knife into his boot, and a shotgun under his overcoat, before attending the meeting or going to his luncheon, under the expectation of having a scrimmage before coming away. Are men better than they were in those days, or have they more sense? We used to prate a great deal more about fraternity and universal brotherhood than we do at present, but did we *live them* as some of us are trying to do now?

There may not have been much Christianity formally recognized in the creation of this club, and the making of its constitution, but the real essence of Christian brotherhood is breathed through every line of that document, and is seen in every intention and purpose of the organization.

Pereaps friends Clinch, Ogden, Hayden and the rest do not regard themselves as missionaries to the benighted Hardwaremen of New York, but the work that they and their associates have done in this club, and the impulse of fraternity it has given to similar organizations elsewhere, are essentially missionary in their purposes and results.

You will pardon me for the above extended comments, but I came away from the club this afternoon full to the brim—not with the waters of Milwaukee, or the vintage of California, but of a mighty good dinner (at my friend's expense) and of fraternity, good will and happy appreciation. Long live the Hardware Club of New York, and may there be many like it!

A. N. OLDMAN.

The Peru Electric Mfg. Co., Peru, Ind., inform a *Hardware* representative that there was never a time in the history of their factory when there was so great a demand for their Laclede and Hercules carbon batteries. The use of these goods is being extended to door-bell, telephone and annunciator work, and are also being used very extensively for medical battery work. As the telephone is becoming more and more an article of popular demand in the country, as well as in the city, the thoughtful Hardwareman will at least take the pains of investigating his opportunities for being first in the field in his section. A line dropped to the Peru Electric Mfg. Co. at the above address, will furnish some information which it might be worth the while of a Hardwareman to possess.

Ambition has ruined many a man, but without ambition all men would be nonentities.—*Hardware and Metal Reporter.*

The Hymn of Pittsburg.

In a recent speech upon the tariff question, in the national House of Representatives, the Hon. John Dalzell, of Pittsburg, paid an eloquent tribute to his home city, to which he referred as "that great city, that at the headwaters of the Ohio, is known in every mart where civilized men exchange commerce, as the favored child of a protective system." He then quoted a portion of a stirring poem entitled "The Hymn of Pittsburg."

An editor of *Hardware*, who was interested in the speech and the poem, wrote to Mr. Dalzell, who responded that the quotation was from a poem written by Col. Richard Realf, a young Englishman who went to Pittsburg some years ago, where he worked upon the local newspaper press. He was a man of fine talents, but unfortunate in his domestic relations, and subsequently committed suicide. Col. Realf was a devoted personal friend of Percy F. Smith, a publisher of Pittsburg, and a frequent visitor at his home. By the kindness of Mr. Smith, we are enabled to reproduce the poem in full:

My father was mighty Vulcan,
I am smith of the land and sea;
The cunning spirit of Tubal Cain
Came with my marrow to me.
I think great thoughts, strong winged with steel,
I coin vast iron acts;
And weld the impalpable dreams of seers
Into utile lyric facts.

I am monarch of all the forges,
I have solved the riddle of fire;
The Amen of Nature to the need of Man
Echoes at my desire.
I search with the subtle soul of flame
The heart of the rocky earth,
And hot from my anvils the prophecies
Of the miracle years blaze forth.

I am swart with the soot of my chimneys,
I drip with the sweat of toil,
I quell and sceptre the savage wastes,
And charm the curse from the soil.
I fling the bridges across the gulfs
That hold us from the to Be,
And build the roads for the bannered march
Of crowned humanity.

Changes in Chambers Street.

The improvement contemplated by the city in the erection of the new Hall of Records, for which purpose it is proposed to cut the block in two which is bounded by Broadway, Centre, Reade and Duane Streets, will make it necessary for a number of well-known houses identified with Hardware to find new homes. Discounting the usual delay which attends these local changes, no great amount of anxiety in regard to future movements is noticeable. Some of the leases will run for a year yet, and if possible to hold on until that time, satisfactory locations might be found which to-day seem very scarce.

Among those to be affected by the improvement will be Sargent & Co., Peck, Stow & Wilcox Co., Stanley Rule & Level Co., Wallace & Sons Co., Oliver Bros., Hall-Marvin Co., and a number of others.

The original extension of Elm Street designed making a street 100 feet wide, to which Elm Street was to be widened, and if this was continued through the block it would cut exactly in the centre of the building of the American News Co. The engineers, however, in drawing up the original plans, desired to escape the decidedly uneven grade of the street between Reade and Worth Streets, and in making the survey for the change intended, made a sharp turn to the left at Worth Street, which by cutting through the blocks between Worth and Pearl, Pearl and Duane and Duane and Reade, would reach Centre at Duane Street, with the formation of a plaza at that point.

This was accomplished by doing away with the two triangles of buildings which those familiar with the locality will remember exists just at this point; one bounded by Reade, Centre, City Hall Place and Duane Streets, and the other by Centre, Reade and City Hall Place, running to a point at Chambers Street. This plaza will greatly relieve the usually heavy trend of traffic constantly converging at this point with Broadway for its destination. This programme had already been decided upon before the decision was made to cut through from Reade to Chambers Sts. by a narrow street, which would leave the American News Co. building intact, and on the square thus formed of the east end of the block, will be erected eventually the new Hall of Records, which it is intended shall be a municipal structure that will reflect credit upon the resources of Greater New York.

Some Views of the Times.

Charles S. Fairchild, former Secretary of the Treasury: "Things are drifting along with a tendency toward better times."

Samuel Spencer, president of the Southern Railroad: "I believe that we shall have good times all over the country within a few months."

George Bowdoin, of J. Pierpont Morgan & Co.: "I think there is a gradual and genuine improvement in the business world."

G. G. Williams, president of the Chemical National Bank: "Business is fair. Things are picking up,"

M. C. Borden, the Fall River manufacturer: "I think that the fall trade will be much better than we have had for some time past."

William Shearer, superintendent New York Clearing House: "Things are undoubtedly better."

John A. Stewart, president United States Trust Co.: "Things are picking up a little."

Edward King, president of the Union Trust Co.: "I think we are on the upward slope."

John Claflin, of the H. B. Claflin Co.: "We are on the road to prosperity again, and no mistake. The clouds are breaking and the skies are brightening. We have touched rock-bottom, and from now on there will be an upward movement. I am absolutely sure of this."

Infringement Suit.

A suit has been brought in the United States Court at Toledo, Ohio, by the Miami Cycle & Mfg. Co., of Middletown, Ohio, against the Union Mfg. Co., of Toledo, manufacturers of the Viking bicycle, for alleged infringement on the Racycle crank hanger, the patents of which were granted to the Miami Cycle & Mfg. Co. in 1895, in this and all foreign countries. Suit is not only brought for infringement of the patent, but also for an accounting of the profits in the manufacture of all such wheels using their crank hanger and a temporary restraining order has been asked for. A similar suit to the one now pending has also been filed in Paris against a French company that have adopted the use of the same device.

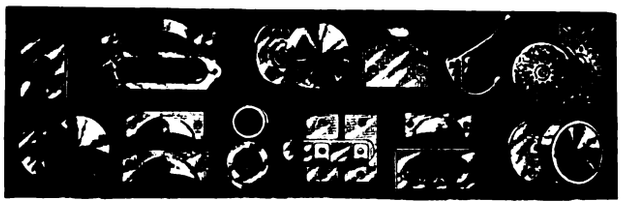
Elected to the Club.

At a regular meeting of the Hardware Club of New York, held on April 15th, the following gentlemen were unanimously elected to membership:

Edward C. Miller, vice-president Magnolia Metal Co., No. 266 West Street.

Charles H. Till, assistant general manager Columbia Rubber Mfg. Co., No. 66 Reade Street.

J. P. Clarendon, No. 78 Gold Street.



The gold production of the United States for 1895, as received by the mint bureau, was $53,026,344. This was an increase of 35 per cent. over the production of 1894.

HARDWARE costs only One Dollar a year.

The Brass Goods Mfg. Co.

Among the leading manufacturers of builders' Hardware and similar brass and bronze goods required by the Hardware trade of the country, the name of the Brass Goods

Mfg. Co. has long been prominently identified, and the intrinsic character of whose production has made their success too well known to be disputed. We present herewith an illustration of their office and factory, situated at Nos. 84 to 92 Third Street, Brooklyn, N. Y.; their New York city salesroom being located at No. 88 Chambers Street. Possessing adequate factory facilities for turning out an extensive line of builders' Hardware, manufactured from plain wrought bronze and brass, their product will be

found on the shelves of every leading jobber of Hardware making a distinctive feature of the class of goods embraced under the head of builders' Hardware. The leading items of this annually increasing line of goods are shown in the smaller illustration given in this article. Their facilities being ample to produce their specialties in the largest quantities, factories running goods of this character would find that a long attention given to economy of production enables this company to offer their services in the production of any goods of new design which they may desire made to order. Correspondence having this object in view is solicited at all times.

The attention of readers is called to the advertisement of the Wallace Barnes estate, on page 2, of this issue. This concern carries a large stock, and a great variety of high grade, cold rolled steel. Hardware dealers when in want of thin gauges of steel, or sizes difficult to find in an ordinary stock, are sure to find what they want by writing to this concern. Besides their stock of cold rolled steel, they carry a complete stock of music wire, and of soft wire suitable for tempering; their specialty, however, is making springs to order. This business was established by the late Wallace Barnes in 1857, and is now managed by his son, C. F. Barnes. During the last four years this house has built up a reputation for good work and honest and liberal dealing, which will warrant us in assuring our readers that all orders placed with them will be filled at prices as low as is consistent with the class of work they turn out.

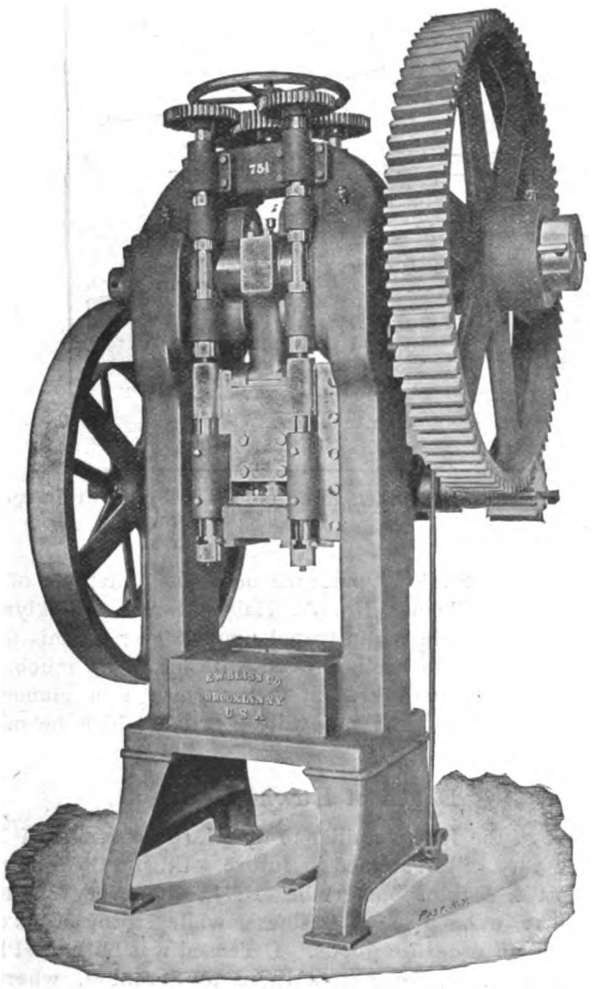
The Canadian Tariff.

The *Canadian Manufacturer and Industrial World*, of Toronto, intends publishing a special edition of the "Canadian Manufacturer," containing, as soon as they become laws, the new Canadian tariff, and the new United States tariff, also the British tariff and the British Merchandise act. These important laws will be printed from authentic copies obtained from official sources, and will be found correct and full in every particular. To have these important papers, accurately reproduced, and all within the covers of one periodical, would undoubtedly be found very useful, and contribute greatly to its preservation.

Lightning Absorbent Blotting Paper.

The J. D. Johnston Co. Newport, R. I., in connection with their prepared glue business advertised in our columns, are placing upon the market an excellent article under the name "Mill 44, Lightning Absorbent" Blotting Paper with which they desire to supply the Hardware trade for the purpose of local advertising. It seems to be admirably adapted for the purposes indicated. Sample lots of sixteen large pads in three colors will be sent on receipt of ten cents.

John W. Sudlow, patentee and manufacturer of the Dandy Sink Cleaner, No. 986 Halsey Street, Brooklyn, N. Y., whose article is illustrated upon page 7 of this issue, states that trade has improved with him very much, and that people generally seem to recognize at a glance the value of the neat and handy little article which he manufactures.



Death of Edwin C. Schott.

One of the faces familiar to the Hardware trade of New York City will be missed in future. Edwin C. Schott, of Schott & Dakin, Somerville, N. J., died very suddenly April 12, at his place of business, while sitting at his desk writing an order for goods. Deceased was born in Philadelphia in 1828, going from there to Scranton, where he was ten years in business, and then retired from active pursuits for a while; in 1868 he went to Somerville, N. J., entering into partnership with W. H. Dakin, under the firm name of Schott & Dakin. Mr. Dakin withdrew from the firm three years ago, but the deceased continued the business alone. Mr. Schott always lived very quietly and unostentatiously, and was one of Somerville's most respected citizens. He was at one time president of the Somerville Dime Savings Bank and was, at the time of his death, a director of the First National Bank. A widow and two adult daughters survive him.

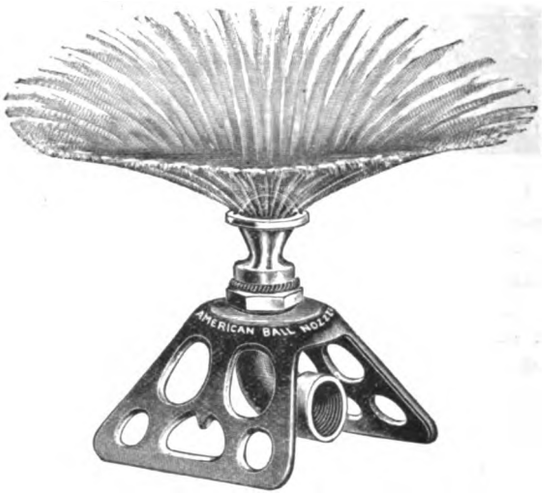
"Bliss" Punching Press, with Cam-Actuated Stripper.

The press shown in the accampanying half tone should be of interest as showing the possibilities of up-to-date punching practice, and as suggesting to what extent the press is now usurping the function of the drill. The principal noticeable feature of the punch here shown is in the cam-actuated stripper device. Piercing dies having stationary strippers are quite liable to distort the plates which are pierced by them, to such an extent as to require subsequent straightening. The stationary strippers are also a great hindrance to rapid and accurate work, the blank having to be placed under them and withdrawn from them in a very inconvenient and time-taking manner. In the present punch, the stripper plates are attached to four heavy vertical rods, and these receive motion from two cams on the main shaft. When the stripper is up, a free space is left between punch and die, enabling the operator to manipulate and observe his work quickly and accurately. The stripper plate comes down on the blank first, straightening it and clamping it tight before the punches enter, and holding it while the punching and stripping is being done, and the work comes out perfectly straight and true. As the stripper plate moves up and down with the punches, they may be made shorter than the stationary stripper would permit, and the punches used are therefore



more resistant and lasting. This stripper also enables the punching of smaller holes in proportion to the thickness of the stock, the stripper acting as a guide for the punches up to the moment when they enter the stock. The press has a 6 inch shaft, weighs about 15,000 pounds, measures 24 inches, between the housings, and is geared 1 to 7½. It is built by the E. W. Bliss Co., No. 18 Adams Street, Brooklyn, N. Y., who will be pleased to furnish further information upon application.

HARDWARE's,, Prices Current" are reliable.

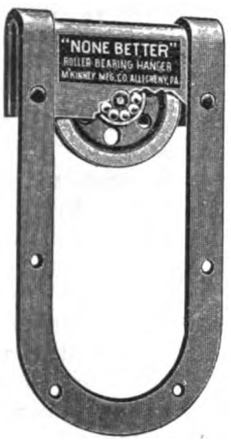
The American Ball Nozzle Lawn Sprinkler.

E. C. Stearns & Co., Syracuse, N. Y., are distributing to the trade the American Ball Nozzle Lawn Sprinkler, the operation of which for the purpose indicated makes it one of the wonders of the nineteenth century. Among the many useful applications that can be made of the ball noz-

zle principle in the distribution of a water supply, this should be one of the most popular, for a more perfect lawn sprinkler it would be difficult to imagine. It is to all appearances simply perfect. No fragile parts, consequently there is nothing to break; no back pressure, so the sprinkling is more like a downpour of rain than anything else, being similar in action to a regular fountain; and beside all that, the manner of operation by the aid of a ball which remains at the point of pressure, makes it a constant object of wonder and surprise even to those familiar with the principle of its action. It most prove a great atmospherical cooler when the "dog days" are upon us. Prices and terms to the trade will be furnished upon application.

Go and See It.

The Hardwareman who visits New York, and who wishes to find a place where an evening can be put in to advantage, is reminded that a large number of the friends of his youth, may be found every afternoon and evening, over in Brooklyn. These friends are aggregated under the name of the Barnum & Bailey Greatest Show on Earth. One may be as old as Methuselah, and as hard-hearted as Plymouth Rock, and yet if he was ever a boy, he cannot attend this great show without feeling that he is a boy once more. It is needless to say that the exhibition is up to its former reputation, and that the attractions which continually fill three rings from eight o'clock until eleven, are the result of a search the world over for novelties in the circus line.



Special attention is called to the advertisement of the Union Electric Co., Cleveland, Ohio, on another page, who are manufacturers of all kinds of telephones. This company have perfected a very superior system for private telephone lines, connecting the different departments of large stores, factories and office buildings with each other, which proves of the greatest convenience as well as a great time saver for the various heads of departments. If any are contemplating putting in a plant of this kind, we would suggest that they correspond with the Union Electric Co. and get their catalogue and prices.

The International Cycle Fittings Co., manufacturers, exporters and jobbers, intend to remove their business from Nos. 70 and 72 Reade Street, New York, to No. 74 Reade Street, on or about May 1st, where they will carry a full line of bicycle sundries and fittings as well as a complete line of built-up wheels and frames.

"None Better" Steel Door Hangers.

The McKinney Mfg. Co., Allegheny, Pa., have recently added to their line of Roller Bearing Steel Door Hangers, marketed under the name of the "None Better," a new size, No. 1 Special, which, while strong enough to carry any ordinary door, is more especially intended for use on single or small double doors. It can be used on any ordinary track having anti-friction rollers, cold rolled steel axles, and fully covered from the weather. With the exception of the pulley, it is built entirely of wrought steel. The list price is $15.00 per dozen pairs.

New England Hardware Dealers.

The regular monthly meeting of the New England Hardware Dealers' Association was held on Wednesday, April 14th, at the United States Hotel, Boston, at 5:15 P.M. Covers were laid for about sixty. After the dinner, the president, with a few well-chosen remarks, introduced the guest of the evening. Col. Albert A. Pope, who, in a very jovial and off-hand way, entertained the members with the progress of the bicycle from 1600 to the present day. The principal object of the members was to hear from Colonel Pope his idea as to the advisability of Hardware dealers handling bicycles. The colonel was more strongly in favor of regular agents, but said that Hardware dealers could handle them if they put the same energy into it that they would into their regular business. He said one of the most essential things to make bicycles pay was a repair department; if they would establish that, there was no reason in his mind why they could not handle them successfully.

The Era of Prosperity at Hand.

Business has been dull long enough.
Business revival is not coming—it is here.
Business can't help being good.
Business is ready to jump—help it jump.
Meet your customers—don't drive them away.
Reach out both hands to welcome new customers.
Look cheerful—be cheerful—spread cheerfulness.
Don't talk hard times to anyone—forget all about the hard times.
Get ready to take advantage of the good times—adopt the National Cash Register System in your store, and make more money this year than you have for the last five.

Read the advertisement of the National Cash Register Co. on page 41 in this issue.

W. C. Heller & Co., Montclair, N. J., manufacturers of steel shelf boxes, mail boxes, wire stretchers and road plows, inform us that business in their factory is very good. As they are also interested, both as wholesalers and retailers, in the sale of general Hardware, they also inform us that their business has been very fine this last three weeks, and that all the builders and contractors in their section have all they can do. They add: "We feel as though we were going to have a better season than ever before."

Mr. Dunham, of the Dunham, Carrigan and Hayden Co., San Francisco and New York, has been among the visitors to New York of late. His partner, Mr. Hayden, saw that he had a chance to test the full capacity of the Hardware Club.

The Champion Germ-Proof Water Filter.

Pure water for drinking purposes is universally looked upon as a necessity, and devices which aid in securing it are constantly sought after. The Champion Safety Lock Co., Cleveland, Ohio, recognizing this demand, have recently improved their "Champion Germ-Proof Filter" so that it can be more readily attached to the water service system of a building. Fig. 1 shows the filter attached to

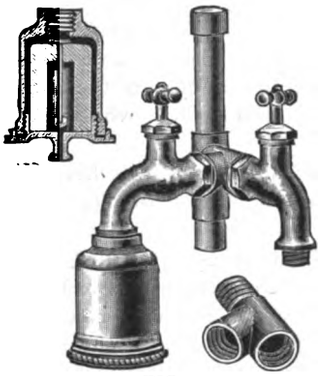

FIG. 1.

FIG 2.

a bibb independent from the one used for supplying water for other domestic purposes. Provision is made for this additional bibb, by means of a three-way connection, shown in Fig. 2, which should be connected with the service pipe. This connection furnishes two openings, one to be used by the bibb for general purposes and the other by the bibb for the filter. Fig. 3 shows a new slip connection, which is made to fit any size smooth bibb and has one end threaded to fit the Champion Filters. A new size has also been added to this excellent line of filters, called the 1½. This has been especially made, it is stated, to meet the demand for a large capacity faucet filter that can be sold at a low price. The construction is on the same principle as shown in Fig. 1.

The filtering medium used in the Champion Filter is a natural stone quarried from mines and turned on special machinery made expressly for this purpose. This stone is

FIG 3.

said to be the most perfect filtering medium known, and the impurities never penetrate the surface. Its pores are so constructed by nature that, while allowing the water to percolate rapidly through them, all germs, microbes and impurities of every description remain on the surface, from which they can be easily washed, the stone remaining white and pure. Circulars giving prices and describing the filter and its connections can be secured by application to the manufactures.

"Ow! I say," said Cholly Peachblow,
"That razor pulls a lot;"
And the mean old barber bluntly asked
The callow youth, "Pulls what?"

A Clever Capture.

A forged order purporting to come from the Biddle Hardware Co., of No. 507 Commerce Street, Philadelphia, and asking for goods, resulted in the arrest of Harry C. Williams, an alleged swindler, for whom the police have been looking for a long time. No less than a dozen Hardware firms in the city have been victimized to the extent of several hundred dollars each during the past few months, according to the prisoners own admissions, by forged orders, which he has succeeded in having filled. Williams' mode of getting goods was to secure an order blank from a well-known firm, fill it out in the name of a member of the company and then give it to a messenger boy, who would present it to be filled.

The prisoner, being charged with forgery, was held in $1000 bail for a further hearing, by Magistrate South, at City Hall.

Mr. Knight, of the Biddle Hardware Co., testified that he was called to the telephone in his office by the Rose Mfg. Co., of No. 311 North Third Street, and was asked as to the genuineness of an order for a dozen bicycle lamps, which a boy, claiming to be from the company, had presented.

As the firm never orders less than a case of such goods, witness at once suspected that something was wrong, and telling Mr. Rose to hold the boy, notified the Fourth district. Special Officer Redding, who was detailed on the case, instructed the firm to let the boy have the lamps.

The boy left the store and was closely followed by Officer Redding, and as the defendant, who was awaiting to meet the boy, advanced to relieve him of the lamps, he was arrested and taken to the station house. Officer Redding also testified that he has been after Williams since the 1st of last January.

Recent Deaths.

Daniel Dillman, a prominent citizen of New Holland, Pa., and for many years engaged in the Hardware business at that place, died suddenly from heart disease, April 1st, aged seventy-one years. A wife and child survive him.

George Christie, one of the best known and respected citizens of Paterson, N. J., died at that place, March 31st, in his seventy-third year, from a stroke of paralysis, received a week previous. He was an old Hardware dealer of Paterson, having in 1882 embarked in that business with his son-in-law, George A. Myers. For a number of years Mr. Christie has been living in retirement, his son, A. R. Christie, conducting the business. The deceased was twice married. His second wife and six children survive him.

John J. Kennedy, the well-known business man and former proprietor of the Branford Lock Works, died suddenly, April 4th, at his residence in New Haven, Conn. He was stricken with apoplexy and expired in a few hours. John J. Kennedy was the son of the late Thomas Kennedy, the founder of the Branford Lock Works, and one of the leading manufacturers of this section a quarter of a century ago. After his establishment of the large factory in Branford, Mr. Kennedy, the elder, died rather suddenly while on a trip to the South, and the superintendency of the factory passed into the hands of his son, who died recently. John J. Kennedy continued as superintendent till the Yale & Towne Mfg. Co. purchased his interest about five years ago. He was widely known throughout the State. His genial manner, remarkable executive ability and good fellowship have made him popular wherever known. Mr. Kennedy was forty-nine years old, and leaves three daughters surviving him.

Bruno Kehtel, of the Hardware firm of Helbing & Kehtel, died on April 7th of typhoid fever at his home in Duluth, Minn. He was one of the most prominent young Germans in that city, having resided there about seventeen years. He was thirty years of age. A wife and three children survive him.

William Adams, senior member of the Hardware firm of Adams Bros & Co., died April 7th at his home in Knoxville, Tenn. He was seventy-seven years of age, and leaves a wife, one daughter and two sons. He was born in Hartford, Conn , but has resided in Knoxville since he arrived there eight years ago, when, with his sons, he opened a Hardware store which continues to this day.

Frederick Nusbickel, who for twenty years conducted a successful Hardware business at Lyons, N. Y., died on April 8th, of paralysis, in that town, at the residence of his son. He was seventy-six years of age, and is survived by a son and four daughters.

Louis F Dunbar, the traveling representative of Sargent & Co., in the State of New York and Pennsylvania, died on Monday last, at his residence in this city, after a brief illness. Commencing as a boy with the company above mentioned, he filled successfully the intervening positions until he graduated as traveling salesman. He was highly regarded by his associates in the house he represented, and was esteemed by its patrons, whom he periodically visited, as an intelligent gentleman fully conversant with the business so confidently entrusted to his conscientious care.

William A. Hungerford, who has been for many years connected with the brass and copper industries, died April 16th at his residence in this city from peritonitis, after an illness of only one week. At the date of his death he was treasurer of the Benedict & Burnham Mfg. Co. He was known to be actively interested in other enterprises, notably the Waterbury Watch Co. and the Gas Engine & Power Co. He was a member of the Hardware, Union League and Colonial Clubs; the New England Society, and the Society of the Sons of American Revolution. He is survived by a widow, two sons and a daughter.

John Lane a pioneer manufacturer of Chicago and an inventor of note, died at his home in that city on April 17th. He was 73 years of age and for a long time had been a sufferer from heart trouble. Mr. Lane was born in New York State and came to this city in early manhood, establishing a plow factory and cutlery shop. He was the inventor of the "iron center" in metal work, and his patented process of silver plating on iron made him famous His sons conducted the plow factory up to the time of the fire in 1871. Mr. Lane leaves two married daughters and two sons.

George T. Moe & Co., oil, gas and gasoline stoves and heaters, No. 50 North Second Street, Philadelphia, inform *Hardware's* Philadelphia representative that business is beginning to brighten up, and that they expect a large trade this year in blue flame oil stoves, gas stoves, etc. They also state that they could handle a good medium and a cheap bicycle to the advantage of manufacturers, as they are in constant communication with a large number of dealers, many of whom could be induced to handle a medium and cheap wheel, if he same were right in quality and looks. Here is a hint to manufacturers who are looking for a source through which to market their goods.

The Stoddard Mfg. Co., Dayton, Ohio, have in their catalogue "M" something which every Hardware dealer who is interested in bicycles, or expects to be, should send for and carefully examine. This company has been very successful in their Tiger and Tigress bicycles, which they say contain "no castings, no freaks, no nonsense." Drop them a postal card asking for this catalogue.

Among the recent visitors to the Hardware Club, was H. H. Bishop, of the McIntosh-Huntington Co., Cleveland Ohio.

The American Seal Paint Works.

It is with pleasure that we illustrate in this connection another of the live and enterprising concerns of Troy, N. Y. The extensive factory herewith shown is pretty well known throughout this country and in foreign parts as the place where the well-known American Seal paints and colors are manufactured. This establishment is the property of William Conners, and is located at Nos. 677 and 679 River Street, Troy. His specialties are the American Seal ready mixed paints, made in any desired shade or color; American Seal builders' and roofers' materials, among which are elastic oil cement for bedding, slate and tile roofs, for brick and stone fronts, vault lights, metal roofs, and for repairing leaks, roof chimneys, sky-lights and fire walls. He also manufactures the American Seal asbestos cement, stove putty and stove lining for furnaces, stoves and ranges; the American Seal metallic and graphite paints for painting tin, wood, iron roofs, brick or stone walls, or any place where a durable paint is required. Mr. Conners has lately issued a number of very attractive cards showing these goods, with a full catalogue, which gives

prices, discounts, etc. He also manufactures a number of articles, auxiliaries of those mentioned above, and will be pleased to send full information, catalogues, etc., on application.

A Light For the Wheel.

Of recent electrical inventions none are of greater interest than the bicycle electric light, especially at this season with the bicycle claiming the attention of all who ride. To obtain a light that will not jolt out has been the aim of electricians since the advent of cycling. To jolt and depolarize the primary battery has been the aim of electricians. With a perfect jolter like the bicycle the primary battery works to perfection, and the aim of the electrician is accomplished. One of the hardest workers in this branch of electrical science is Albert C. Fletcher, of Cleveland, Ohio, the inventor of the necktie light, pocket battery, etc. The difficulties he has overcome have forced many electricians to the conclusion that the primary battery could never be made the ideal generator of electricity, such as is found in the batteries of the Ohio Electric Bicycle Light. Of this it has been said: "In this invention the generation of gas is overcome, and leaks are unheard of. Those who have worked in this line will appreciate what has been accomplished. How bicycle riders are delighted with the Ohio bicycle electric light can only be realized by those who have attempted to keep lighted an ordinary lantern on their wheels." Lack of space prevents a more lengthy notice of this invention, but all who are interested can obtain illustrated circulars by addressing the Ohio Electric Works, Cleveland, Ohio, who manufacture this and many other electrical novelties.

Business Changes.

An elderly gentleman engaged in business for some twenty years past in New York and its vicinity, and which requires him to visit various lines of trade, said recently: "I find in the last few months that I am obliged to begin all over again. I go into a concern with which I have had dealings for years, and am surprised to find that the man with whom I have been transacting my business no longer sits at the desk. I ask for him and am told that he is no longer with the concern. Another, and in many cases a younger, man is there instead. It is almost like presenting my business anew. There is a perceptible interruption to relations, and an immense amount of new work to be done before I can get back to the position I occupied under the old management. This I meet almost universally. Some establishments have seized upon the present opportunity to rid themselves of dead wood. Others have hired cheaper help. Others have seen the opportunity of pensioning men long in their employ and superseding their somewhat old-fogy management by that of younger men up to date. Were I to tell you the number of cases in which these circumstances come to light, you would be astonished."—*Exchange.*

The following important subjects are very neatly elaborated upon in a very comprehensive circular just issued by the Bissell Carpet Sweeper Co.: Bissell's "Cyco" bearing Carpet Sweepers. Bissell's Display Shield. Bissell's Double Easel,—new. Bissell's Advertising Helps. Bissell's Crystal Sweeper. Cheap Carpet Sweepers. Detailed information concerning the above subjects and the special comprehensive circular above referred to, and which is now ready for distribution, can be had on application to either Grand Rapids, Mich., or the New York city offices of the Bissell Carpet Sweeper Co.

The C. R. Meres Heater Mfg. Co., of Norwalk, Ohio, are putting in one of their hot water heaters, combining hot water for domestic purposes, in the large residence of Judge Clemons, of Marblehead, Ohio. The hot water domestic supply feature of their system is proving a grand success.

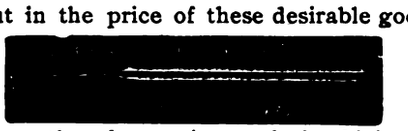
NEW GOODS AND SPECIALTIES.

The Banner Bicycle Bracket.

The Plume & Atwood Mfg. Co., Waterbury, Conn., and No. 29 Murray Street, New York, are placing upon the market in connection with their very popular Banner Bicycle Lamp, a bracket which under the name of the Banner Bicycle Bracket is commanding the interested attention of the trade. The demand is steadily increasing among the



cycle riders for a rigid bracket, and with this idea in view, the Banner was constructed; it can be attached to either post or fork of wheel, and can be used on either the right or left hand side. Having a ball and socket joint, an adjustment to any angle is permitted by its construction; this original feature is highly regarded. It is tightened by thumb screws, which is the most satisfactory form of fastening, and to protect the enamel of the wheel the bracket is

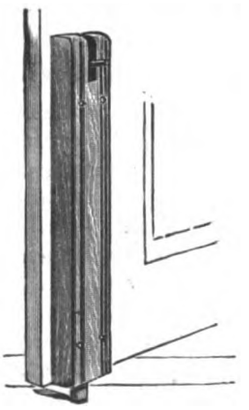
lined with chamois. The bracket is furnished separate from the lamp and with an attachment which permits it to be used on all regular patterns of lamps of other makes than the Banner, for which it was originally constructed.

Cannon's Diamond Point Nail Sets.

The Storm Mfg. Co., Newark, N. J., John H. Graham & Co., No. 113 Chambers Street, New York, sole selling agents, with a view of introducing their celebrated Cannon's Diamond Point Nail Sets in sections where its value is at present unknown, announce in our columns on page 11, a big cut in the price of these desirable goods. The

price is one worthy of attention, and should be asked for at once in order that this advantage may be availed of previous to its withdrawal and the return to usual methods of disposing of the production. These excellent nail sets have been favorites with the Hardware trade for a number of years, and their superiority to many of the nail sets previously used by the trade has been of an unquestioned character. They are carefully made from the best quality of tool steel of standard merit. The points are turned, and thoroughly tempered, and will not break off in the customary use to which they are applied.

Mounted Kitchen Sandstone.

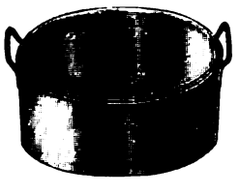


The Pike Mfg. Co., Pike Station, N. H., and No. 151 Chambers Street, New York, are the makers of a new

sharpening and scouring stone intended for table, kitchen and butcher knives, which forms one of their many seasonable specialties. The accompanying illustration shows the article so clearly, that any detailed description would seem to be unnecessary. It consists of a sharp grained sandstone 8½ inches long by 1½ inches square, mounted in a neat box. This stone is well adapted to sharpen all knives that require a coarse, quick-cutting edge, and very useful for scouring sinks, kettles, etc. The box not only makes it a much neater and more attractive article to sell, but protects the stone from breakage. It is designed to be sold for ten cents, and the low price insures a large sale The trade prices will be furnished upon application.

The Phillips Door Holder.

The A. J. Phillips Co., Fenton, Mich., are placing upon the market a specialty in the shape of a convenient door holder, which it is intended shall meet with a large sale at the popular price of ten cents. As indicated in the illustration, it is provided with a rubber foot having a strong spring. When not in use it is raised by turning the heavy wire lifting stem. It is principally intended to keep doors from swinging and slamming; when attached to a door, the



wire stem is turned, which allows the rubber stop to press upon the floor. It can be relied upon to hold the door partly open, or wide open, making it extremely easy to regulate the temperature of the room where it may be used, and making the use of chairs, bricks, and other articles entirely unnecessary for the purpose of holding the door in position. They are made from hardwood well oiled, and packed for the trade in boxes containing two dozen, the list price being $1.20 per dozen.

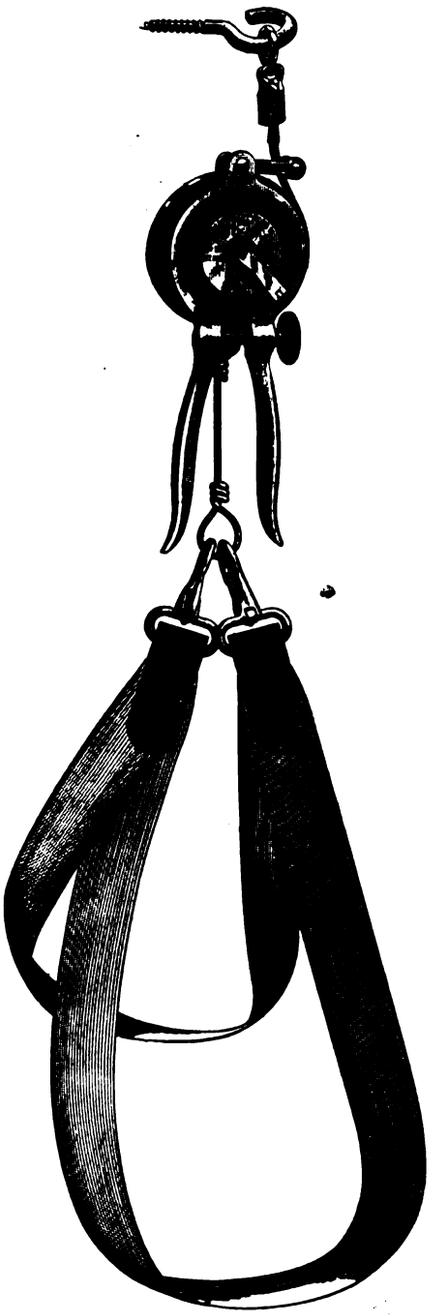
Digitized by Google

The Eynon Patent Mixer and Beater.

Eynon & Sons, No. 122 North Sixth Street, Philadelphia, Pa., are manufacturing and introducing to the trade in Hardware and house-furnishing goods the "Eynon Patent Mixer and Beater" for household use, which is a device for mixing and beating sponge or batter for cakes,

PAN

puddings, custards and icing, mashing potatoes or other vegetables, beating eggs, making butter, etc.; in fact, it seems to be a combination tool for kitchen purposes, which serves completely and satisfactorily the uses of the various utensils at present in vogue. The device as shown in the illustration, is 4½ inches deep and 8½ inches in diameter, for a capacity of one gallon. When the handle is turned around in the operation of the mechanical lid, the rotation of the same carries with it the small pinion wheels to which are fastened the secondary arms, the motion to which is imparted by the central stationary spur gear. These secondary arms being rigidly connected with the said pinions, rotation is consequently imparted to the beaters attached to them; they are consequently rotated while they are being carried around the mixing pan. This system of imparting the necessary complex motion referred to makes it possible to beat thoroughly the contents of the pan, without imparting that centrifugal motion which usually results in throwing out the contents unless reduced to quarter the capacity. When the lid is removed, all the operative parts being attached to it, the contents of the pan are left without obstruction of any kind, and can readily be removed. One turn of the handle producing five revolutions, readily explains the rapidity with which the device



MECHANICAL LID

does its work. Circulars giving full information, as well as a number of testimonials regarding its merits, will be furnished by the manufacturers upon request.

The Economy Pocket Fire Escape.

The Economy Mfg. Co., No. 60 Broadway, New York, are introducing the Economy Pocket Fire Escape, which we illustrate on this page. This fire escape seems to possess so many commendable points of excellence and utility in its construction, as to make its advent welcomed by those who have made a study of such methods for securing safety in the presence of an appalling danger. In the device employed, there are no bulky ropes, cords or wire cables, but instead of these a steel tape is used, 75 feet in length and capable of sustaining 1000 pounds. This steel tape is one of the special features of this machine adding greatly to its portability. The entire machine is made of metal, is handsomely nickel plated and weighs only 28 ounces; the metals used in its construction being steel and phosphor-bronze increases its reliability, and by means of the surface contact of the steel brakes with the phosphor-bronze brake-wheel, the greatest degree of frictional resistance combined with the perfect smoothness of movement is obtained, which would be unattainable in any other way. To provide for the descent of a person made helpless from giddiness or fright, the machine can be so adjusted and set by means of the set screw on the handles, as to drop a person a given distance with a gradually retarded motion until stopped at the point of safety. Primitive methods such as sliding down a rope or wire cable are avoided. The brake which regulates the speed is positive in character and the

tape simply unwinds, and the descent of one, two or even three persons is effectively regulated by the grip of the hand. The fact that every part of the machine is carefully and thoroughly tested before leaving the factory, inspires that feeling of confidence in its use which would underlie its adoption. The body support, or seat, being made of flexible webbing, folds up so effectually, as to enable the complete machine to be carried if necessary in a hip pocket; the mechanical ingenuity exhibited in its construction is certainly of a high order. The value of a fire escape so simple in its method, in private houses, hotels, flats, apartments, factories and school buildings, can hardly be over estimated, and this one seems so practical that any one can use it, and at the same time so small, light and compact,

Digitized by Google

that it can be carried about so easily as to cause not the slightest inconvenience.

Simplex Hose Mender and Coupling.

King & Knight, Boston, Mass., are placing upon the market two very useful specialties suitable for the season, and which we illustrate herewith. The article which is

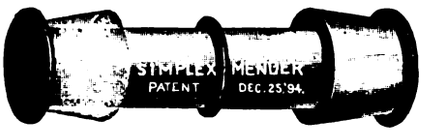


FIG. 1.

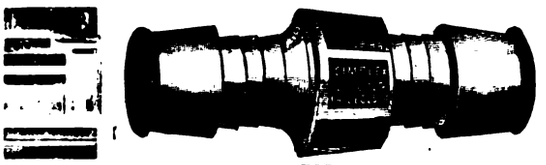
shown in Fig. 1, is the "Simplex Hose Mender," which is a very simple contrivance intended for the repairing of defective hose. It is made of iron suitable for ½, ¾ and 1 inch hose; it is designed to hold the hose by undercut cone ends, which require no clamps or bands. The "Simplex Hose Coupling" illustrated in Fig. 2 is made of brass, and in sizes suitable for ½ and ¾ inch hose; the cone ends are cut in such a way that they form an anchor fastening



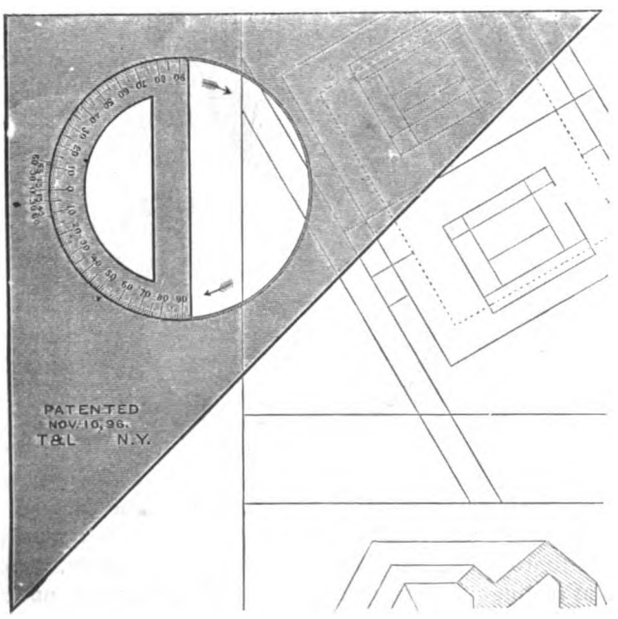


FIG. 2.

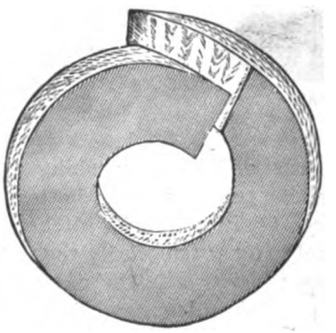
which enables them to become imbedded in the hose in a manner so firm that no hydrant pressure can dislodge the coupling or blow it out. The couplings are pushed into place as is customary with other styles, but needing no bands or clamps to hold them in their place.

Belcher's Combined Triangle and Protractor.



Among the many tools of great utility with which the recently issued catalogue of Tower & Lyon, No 95 Chambers Street, New York, is well filled, we notice the extremely useful "Combined Triangle and Protractor," made under Belcher's patents, which we illustrate herewith, and should prove an indispensable tool for architects, draughtsmen and all technical students. It is very simple in construction, and yet can be manipulated in its many operations with ease and accuracy. Combined with a draughtsman's

transparent triangle, it forms a protractor that is simply perfect. The protractor is fitted by a double bevelled edge into a corresponding groove in the circular opening in the transparent triangle, where it is held securely by a spring adjusted to rest in the groove completing the circle. In this way the protractor is held firmly against displacement, while at the same time it may be quickly rotated to perfect adjustmeut for the angle of any degree or fraction of a degree which may be desired. Price complete is $3.00 each.

Gould's Steam and Water Packing

The Gould Packing Co., No. 88 Cambridge Street, East Cambridge, Mass., are placing upon the market a steam and water packing which is claimed to be the "original ring packing," it having been patented in 1880, and become the most popular form ever since. It is a self-lubricating packing, both steam and water tight, possessing, it is stated, a minimum of friction, and if directions are followed, no liability of becoming hard in use. For

piston rods, valve stems of steam engines and steam and ammonia pumps, electric light plants, water works, breweries and refrigerating machines it seems to be especially adapted, as it does not corrode the metal surfaces with which it comes in contact. It is sold by the manufacturers both at wholesale and retail, and is sold by the inch in length of stuffing box; waste can thus be avoided by ordering according to depth of box an exact quantity. It takes from two to five rings to make one inch of packing according to thickness of stock.

The Way It Acted.

A Hardware dealer named Sam Smith, from a country place, visited a large wholesale warehouse in Chicago and ordered a quantity of goods. He was politely received, and one of the principals showed him over the establishment. On reaching the fourth floor the customer saw a speaking tube on the wall, the first he had ever seen.

"What is that?" he asked.

"Oh, that is a speaking tube. It is a great convenience. We can talk with it to the clerks on the packing floor without taking the trouble of going down stairs."

"Can they hear anything that you say through it?"

"Yes, and they can reply."

"You don't say so. May I talk through it?"

"Certainly."

The visitor put his mouth to the tube and asked:

"Are Sam Smith's goods packed yet?"

The people in the office supposed it was the salesman who had asked the question, and in a moment the distinct reply came back:

"No. We are waiting for a telegram from his town. He looks like a slippery customer."—*Exchange.*

In the absence of the regular golf editor the following question from a beginner was referred to the turf editor for an answer: "In a game of golf is it right to fuzzle your put, or is it better to fetter on the tee?" The turf editor set his teeth firmly, stared hard at the wall in front of him a few moments and wrote the following reply: "In case a player snaggles his iron it is permissible for him to fuzzle his put, but a better plan would be for him to drop his guppy into the pringle and snoodle it out with a niblick."—*Chicago Tribune.*

The Scranton & Co., New Haven, Conn., manufacturers of the Scranton Nail Pullers, have recently appointed as their selling agents, J. C. McCarty & Co., No. 97 Chambers Street, New York, to whom all enquiries in regard to prices and terms should be forwarded.

Digitized by Google

RECENT TRADE PUBLICATIONS

The W. Bingham Co , Nos 97 and 99 Superior Street, and Nos. 142 to 150 Water Street, Cleveland, Ohio, have recently published and are distributing to their customers and the trade generally, a volume of over 120 pages devoted to the interests of their business. This pamphlet in its contents is divided for convenience of reference into four sections called Sections A, B, C and D. Section A, Covering Machinists' Tools; Section B, Carpenters' Tools; Section C, Blacksmiths' Tools, and Section D, Manufacturers' Supplies. The purpose of the company in publishing this convenient book of reference—so different from anything in the nature of a catalogue with prices and discounts—is clearly stated in the following "Introductory" which forms it first printed page: "The following pages contain in a condensed form, mention of our Fine Tools and Manufacturers' Supplies only. To catalogue our full line requires a book of 1476 pages. We print no prices. List prices would be misleading, and we prefer to quote only to those who intend purchasing. Come in, and we will show you the goods and name you prices, which you will find right. We want your trade. We have been selling this class of goods to Cleveland people for fifty-six years, and the fact that the brands we carry (many of them exclusively) have the preference among those who use good goods shows our success in pleasing our customers." The contents of the pamphlets are placed in a style that is pleasantly discursive and sufficiently descriptive to encourage further perusal, giving the points of excellence and nature of any difference between the articles composing the specified lists of items. The manner of doing this can be best exemplified by making a small extract from one of the pages in Section B, which accompanied by a small illustration reads as follows: "Levels, Spirit. Davis—Iron, adjustable, double plumb and level. Stanley Rule & Level Co.'s—with stationary and adjustable glasses, arched top plate, brass lipped sides. Fine mahogany and rosewood, brass bound, with two side views and ground glass. Duplex, two side views and top plate, mahogany. Handy, with hand groove on side, easily held. Pocket, iron and brass, seven styles. Bit-and-square, for attaching to brace bit, or carpenters' square, for perpendicular, horizontal or forty-five-degree work. Wood's—With extension sights." Altogether it will be found very useful to the buying member of the firms, who are patrons of the W. Bingham Co., for in this convenient book he can check the styles of goods he considers it necessary to carry in his local stock, without impairing the appearance of his larger catalogue.

Erie Specialty Co., Erie, Pa., have issued their latest catalogue for the season of 1897 and embracing in its fifty pages as salable a line of Hardware specialties as the trade have had sent to them this season. It is very handsomely printed in two attractive colors, and presents an extremely creditable display, commemorating the first year of their location in their new plant. Notwithstanding the apathy shown in many manufacturing centres during the last six months, this enterprising company have doubled their former capacity by enlarging their factory and adding a number of new tools especially designed for the class of work they are producing and which they found necessary in order to meet the increasing demand for their product. They now occupy a floor space of 20,000 square feet, each one of their various departments being under the control of men who have grown up in the business, with the special training needed for the department under their charge, thus insuring a perfect output. Their line covers a large assortment of cork-pulling specialties, from the "Quick and Easy," with and without bottle clasp attachment; the "Walker Automatic," with which the cork is drawn by one movement of the lever; the "Samson," which is the pioneer quick-puller on the market for years; to the "Walker's Improved," which is a good puller for families and counter use. The catalogue also embraces an assortment of the regular styles of corkscrews, from the plainest to those having improved features increasing their utility. The company manufacture a line of lemon squeezers as remarkable for original methods of extracting the juice as their corkscrews are in their especial field. Other appliances required by the trade are noted as follows: Milk shakes, ice grips, ice shaves, in great variety; cigar cutters, a large variety for advertising and counter purposes; cigar box openers, tobacco cutters, cigar lighters, with and without the cutter combined. This little catalogue is well worth sending for on the part of the Hardware dealer who desires to be up-to-date on the improved goods constantly manufactured by American industry and invention, some of which will come in the nature of a surprise at their great variety.

We have before referred in complimentary terms to the pleasing little booklets which are issued every season for local advertising by the John E. Bassett & Co., New Haven, Conn. In a more original vein than usual, is the one just received from them entitled, "Spring Word Pictures," one of which we transplant as a novelty in its especial line:

THE DRINK-MIXER.

The heat was drying up the man's throat,
It seemed a desert where no water is;
The wheels in his head had been scorching,
And his throat felt like a cinder path;
He longed for drink—cool, wet drink.

* * * * * * *

His neighbor calls to him
And finds a seat for him in the shade;
He takes a small, cold bottle and draws the cork,
He takes an ice pick and cracks some ice,
He takes a lemon-squeezer and extracts some juice,
He takes a shaker and mixes them together,
He fills two glasses and says:
"Come, let us drown this thirst!"
The man drinks;
He drains his glass, and remarks:
"In the manufacture of summer throat washes
You're a peach!"

Corkscrews and drink tools for summer wear
Are always good if they were bought at Bassett's,

The Campbell Cutlery Co., No. 426 South Clinton Street, Syracuse, N. Y., are distributing to the trade their 1897 catalogue of the show cases and store fixtures made by them under their various patents. This includes the Campbell Practical Sliding Display Trays, as well as the usual and regular show cases—with and without metal corners—with square fronts, oval fronts and mansard fronts, and with either slide backs or lifting top (for cigars.) Their sliding display trays have proved the most popular fixture ever applied to a show case, more than quadrupling their usual convenience and utility. They are made to fit

Digitized by Google

any show case, permitting the dealer to economize on his case room, and while keeping his stock in excellent position, is enabled to make the most brilliant display of his assorted stock.

C. Hanika & Sons Agricultural Iron Works, Muncie, Ind., have just published their catalogue No. 17, covering their line of perfection wire lawn and farm fence, also a full line of gates, posts and fence supplies. The many styles illustrated are certainly new, novel and up-to-date; some of which can be utilized in the adornment of banks and offices as well as others suitable for cemetery guards and area railing. They are large manufacturers of stair, jail, station house and column work, crestings, finials, etc., of which separate catalogues are furnished the trade upon application.

Edward Smith & Co., No. 45 Broadway, New York, in the interest of the several preservative coatings for iron work of which they are the exclusive manufacturers, have published a handsomely illustrated pamphlet of eighty pages, entitled "Application of Paints, Varnishes and Enamels for the Protection of Iron and Steel Structures and Hydraulic Work." It is copiously illustrated with half-tones, showing different classes of work in connection with the text and body of the book.

American Wire Goods Co., Lowell, Mass., pamphlet containing price list of bright iron wire goods for cotton and woolen mills and loom harness makers.

Meyers' Putz Cream.

The Meyers Putz Pomade Co., No. 285 Devonshire Street, Boston, Mass., are the manufacturers of the "Meyers' Putz Cream," a liquid metal polish for polishing brass, copper, tin, nickel, zinc, German silver, etc., which they are introducing to the Hardware trade with considerable success. It is stated to be entirely free from acid, poison or grit of any kind, and capable of producing a brilliant and lasting polish without scratching. Can be used for removing rust from polished iron or steel, and is put up for sale in convenient packages from one-quarter pint up to one gallon in size. Circulars conveying full information in regard to its usefulness will be mailed upon request.

Opened With Prayer.

At the dinner recently given by The Authors' Club to the poet, Richard Henry Stoddard, ex-Judge Henry E. Howland, president of the Century Club, who spoke for that club, set the diners howling by telling this story at Mr. Stoddard's expense:

"Stoddard," said Judge Howland, "was opening a can of tomatoes one night. Sounds that came from the kitchen convinced Mrs. Stoddard that her husband was not accomplishing his task without a struggle. Finally she called to him:

"'What are you doing, dear?'

"'Opening this can of tomatoes,' came the rather gruff answer.

"'What are you opening it with?'

"'With a knife. Did you think I was using my teeth?'

"'Not at all, dear,' came the answer. 'I thought from your language you were opening it with prayer.'"

The Worcester & Marlboro Street Railroad Co., of Worcester, Mass., are erecting at Northboro, Mass., a new power station. The engine room is 55 feet wide and 63 feet long and the boiler room is 45 feet wide and 40 feet long. The roof which is to be gravel on plank is supported by steel trusses. Cutting & Bardwell, of Worcester, Mass., are the general contractors for the work, and the steel work will be erected by the Berlin Iron Bridge Co., East Berlin, Conn.

Every Trade Has Its Disease.

It is well known that there are a number of dangerous trades which give rise to serious diseases; but as a matter of fact, almost every occupation has some ailment peculiar to itself. A doctor can always tell if his patient is a baker, for instance, by the state of his teeth. The flour dust collects on his teeth, becomes acid, and gives rise to a special kind of decay. Bakers, owing to their irregular life, sleeping in the day and working at night, and because of the hot air and dust, are great victims to consumption. Blacksmiths, strong as they are, very often suffer from paralysis of the whole right side from the continuous shock of hammering, and their eyes become weak from the glare of the fire. Athletes do not, as a rule, enjoy long life. Professional boxers, wrestlers, gymnasts, cyclists, suffer from enlargement of the heart and diseases of the lungs. Boilermakers get deaf from the continual loud noise. Brewers and brewers' drivers drink beer in such large quantities that they ruin their livers and generally die young. Carpenters and cabinet makers are afflicted with varicose veins in the legs, and the action of the shoulder in sawing and planing produces a diseased condition of the large artery that runs from the heart to the arm, so that there is not a carpenter living, a doctor says, in whom a curious noise may not be heard by applying the ear to that blood vessel. Clergyman's sore throat is well known.

Miners, from working in the dark, become very irritable; their eyes get weak, and their lungs become quite black—miners' lung. Cooks, particularly male cooks, working in hotels, clubs and restaurants, get gout from continually tasting rich food; and both male and female cooks get varicose veins and flat foot from long standing, as well as the well known ache of the face, from the heat and dirt. Coopers have a lump on the knee, which is really a little bag of fluid put there by nature to protect the knee from the injurious effects of pressing it against the barrel. Divers' hearts become distended from holding their breath.

Domestic servants are remarkable for suffering from typhoid fever, housemaids are frequently affiicted with poverty of blood from drinking tea and running upstairs. Dressmakers' long hours and confinement result in consumption very often, but more often in indigestion, poverty of blood, and impaired eyesight. The fumes of nitric acid make goldsmiths' eyes sore, and they get cramps in their fingers from catching small screws. Nearly all the human beings who suffer from that awful disease, glanders, are grooms.

India-rubber workers have very bad headaches and great mental depression. Painters are poisoned by the lead they use so much, and all their muscles, but especially their wrist muscles, become very weak. Photographers get poisoned by cyanide of potassium. The dust that enters the lungs of potters when they are sifting clay interferes so much with their breathing that "potters' asthma" is a well known disease. Compositors get cracks and fissures in their lips and small tumors in their mouths from the habit of putting type in their mouth, and consumption attacks them frequently because of the stooping posture and the confined and sedentary life. Sailors suffer greatly from consumption, owing to the cold and damp and the bad air of the forecastle. Salesmen and saleswomen in shops have a lot of standing, which gives them varicose veins and pains in the feet; cloth scourers, who inhale benzine and turpentine, suffer much from headache, lassitude and nervousness. Shoemakers get their chest pressed in by the last, lose their appetite and strength, and have headaches. Stonecutters' eyes are often injured by the flying stone.

The sedentary life of lawyers, artists, students and literary men gives rise to gout which is said to kill more wise men than fools.—*Pall Mall Gazette.*

Hard Times.

"Hard times come again no more!" Pshaw! we all sing it, but do we know what hard times are? We sing it while we eat beefsteak, oysters and three kinds of bread at the same meal; we shout it while we smoke cigars; we think of it while we comfortably stretch our legs on Brussels carpets before a blazing grate, with well dressed sons and expensively clad daughters around us. We groan it while we read our morning and evening papers; we dream it in our soft, springy beds; we shout it through our telephones, and ring the changes on it as we take our summer outing or run "centuries" on $100 bicycles.

Hard times! bewails the finely clad wife as she elbows her way along the bargain counter.

Hard times! moans the clean-shaven husband as a press of the button sheds the electric light over his at home friends—and yet in these days we don't know what hard times are.

We think we do —but we don't. The writer is reminded of papa's remembrances, where, in one of the richest parts of this great country of ours, that a whole town of some 2000 inhabitants possessed less than $500 in money.

All exchange was by barter. Among the best and richest families beefsteak was a once-a-week visitor, round beef a luxury, oysters an unheard-of dainty; corn bread was the usual; the cheap pipe tobacco was a dissipation; cold bedrooms, scant wood fires, calico then what silks are to-day; 6x8 window panes were helped out by hats, rags and old papers; a weekly paper was an extravagance and served two families; ingrain carpets scarce and Brussels not heard of.

Beds were slatted or corded, and the sole vacation was a ride (not over brick pavements) to the annual picnic in the one horse shay.

The men worked from sun-up to sunset—the women worked all the time. Do any of our readers recall those days? Yet it is doubtful if there was in those days such a universal spirit of unrest and discontent, such a concert of growling—as to day. Is it fair? Are we grateful? Can we afford to waste time in bewailing the slowness of prosperity when fate is so easy with us?

Let us put aside these ugly tempers of ours—smile at the shadows—all sunshine makes the desert. Look toward the sun; drink in its beauties, and talk and think business confidence. Let us shut our eyes to trouble, and if all would do so times would be good.—*State Register.*

How Seamless Tubes are Drawn.

Solid drawn steel tubes have been made for years for boilers and general use, but the great demand arose when the safety type of bicycle came into vogue, the diamond frame requiring the use of a greater length of tubing and necessitating that this should be as light as possible. There are variations in the methods for producing a cold-drawn steel tube, but the principle of all is practically the same. Only a very high class of steel is suitable for the purpose, and that hitherto employed has been chiefly Swedish charcoal steel, containing a certain proportion of carbon. The steel is taken in the form of a billet two feet long and about six inches in diameter. A hole is bored through the centre and it is heated, annealed and rolled into the form of a tube about 1¼ inches in diameter, with wall of about 10 gauge. This is then drawn through a die and over a mandrel by means of a draw-bench, until about 800 feet long, beautifully smooth and bright both within and without. This is not drawn at once, but in a number of operations, and between each of them the metal has to be repickled and reannealed to prevent the crystallization to which the drawing process tends to give rise. The first drawings of the tube leave it about three-eighths of an inch thick, but this gradually decreases until a tube is produced which is of the thickness of stout writing paper. This is the class of tube employed in bicycles and that imparts a strength and rigidity out of all proportion to its lightness.—*Boston Journal of Commerce.*

He Played the Drum.

"Your talk about determining people's occupations by their faces sounds to me a good deal like tommyrot," said the man in golf stockings to the smart physiognomist, who had been trying to impress a street-car audience with the extent and accuracy of his attainments; "there is a good deal more to be learned from their general physique, the set of the shoulders, condition of their various muscles, etc."

"I'll bet you five," replied the physiognomist, "that you can't come within forty rods of judging the occupation of the man sitting next to you."

"I'll take that bet! Getting money as easily as that beats working for it all hollow this weather."

The man in the golf stockings studied his subject carefully from all points of view. Then, having obtained permission, he felt of his arm. It was as hard as iron.

As he did this, a smile of triumph spread over the features of the man in the golf stockings.

"You are a Hardware dealer!" he exclaimed, triumphantly to the subject; "is that not so?"

"Nein," the man replied; "I blay der bass drum in der Wagner orchestra."—*Buffalo Express.*

Old Glass.

"The glazier of fifty years ago," said a Maine man of experience in the business, "worked differently from what we do to-day. Glass was very costly then, compared with the present prices, and much of it was so warped and crooked, it would be a curiosity in these times. Owing to the cost we had to be very careful in setting it, and the glazier of that day had to be a wood carver, as well as a man of putty. The warped panels had to be laid into their sash and their shape 'scribed on the wood underneath. This was then cut away so as to make the glass fit into place. Nowadays the glass is tolerably true, and besides it is so cheap that we never stand for a fit. It is sprung into place, and if it breaks it is thrown aside. The old crooked glass was, some of it, of superior quality. This was known as Boston crown glass or Berkshire crystal. It was clearer and more brilliant than most modern glass. Only the better quality of houses had this kind, but there are still many old residences throughout Maine in which it may be found."—*Lewiston Journal.*

Cost of Telegraphing Abroad.

Cable messages from a central point in the United States to England and France cost 31 cents per word; to Belgium, 36 cents; to Holland and Italy, 38 cents; to Austria, 40 cents; to Greece, 44 cents; to Egypt, 62 cents; to Russia, 49 cents. The Cuban war has multiplied many times the volume of telegraphic business in the West Indies. The lowest rate is 40 cents a word for messages to Havana. No town in the West Indies outside of Cuba can be reached for less than $1.05 per word. To cable to Porto Rico costs $1.85 per word. Messages to Brazil cost from $1.35 to $1.87 per word; to British Guiana, $2.17; to China, $2.02; to Japan, $2.27; to India, $1.29; to the Philippine Islands, $2.51; to Siam, $1.41. It costs $2.62 a word to cable to Queensland, and, highest figures of all, $3.02 to cable a word to Mossamedes in Africa.—*American Exporter.*

"That new reporter of ours is a lucky find."

"What has he done?"

"Why, instead of saying that the crowd at the big meeting last night were packed closer than sardines, he said they crowded each other like fraudulent votes in a stuffed ballot box."

Review of the Markets.

Hardware: A continuance of encouraging conditions is noticeable; roads in the interior are improving in character, old accounts are being squared up or reduced in volume, the retailer sending an order with his, possibly delayed, remittance, the jobber finds his conservative deliveries of stock hardly large enough for the growing demand, and supplements his previous limited requisitions by an additional order. The feeling is abroad that we are gradually but surely "getting thar;" there will be no especial necessity for "coming early to avoid the rush," but continued improvement will be the feature from now on.

Wire Nails: Are still in excellent demand, on a market that maintains the steadiness so apparent for a number of weeks past. While the mills are in some cases easing up on the orders booked sixty days ago, still the demand for the future, under what are considered as favorable conditions, still continues. The jobbers report a steady reduction in their stocks at a date earlier than they anticipated, creating fresh demands on their part. Under these circumstances it is no wonder that prices continue firm, and the quotation of $1.40@$1.45, f. o. b. at mill, for car load lots, does not imply immediate delivery, except under more favorable conditions as to supply, than exist at present. For prompt deliveries, an advance of 5 cents a keg is still a feature. Less than car load lots increase the quotations 5 to 10 cents a keg. New York prices are: Car load lots on dock, $1.55 @$1.60. Smaller lots from store, $1.65@$1.70.

Cut Nails: Continue in fair demand, and the present arrangement of quoting prices delivered at the various shipping points or trade centers seems to be working admirably and meeting the approval of the trade. The prices continue as previously noted. Car load lots delivered, New York, $1.40; Philadelphia, $1.38; Boston, $1.42; Smaller lots from store being held at 10 cents a keg advance.

Pocket Cutlery: The movement in the line of pocket cutlery of the qualities affected by the schedules of the proposed tariff, have been quite extensive for some weeks past, and many well-known styles are quite difficult to obtain. The demand for cheaper grades of leading American makes is becoming more noticeable, and the manufacturers are rejoicing over the prospect of an improved output later.

Linseed Oil: The Dean Linseed Oil Co., quote as follows: In lots of less than 5 barrels, 33 cents per gallon; in lots of 5 barrels or more, 32 cents per gallon; Boiled Linseed Oil, 2 cents per gallon higher; Calcutta Oil, 50 cents per gallon.

THE BUFFALO TRADE.

Since our last letter to you, we are pleased to say there has been some improvement in trade, and at this writing the horizon looks even brighter, if any change can be reported. Seasonable goods are moving in fair quantities; some of the merchants are beginning to anticipate their wants and collections are better. A few bright days to dry up the country roads, we feel would also add much to other favorable conditions, and then we could say with emphasis, that "that business is good."

We should like a little firmer foundation in the iron market, for this product has a great influence in other lines. We frequently feel that much could be accomplished in the way of stimulating or building up confidence, if merchants would carefully consider whether or not their business was equally as good, if not better, than for the corresponding time last year, and instead of complaining, speak a word of encouragement.

Here we are reminded of a certain traveling salesman who has called upon the jobbing trade for years, and who has never yet been known to utter a complaint regarding business, but on the other hand always has "good trade," feels "happy," and does much to create the feeling that we really have little cause for complaint. With this spirit pervading the minds of the trade in general, we should all see the bright instead of gloomy side of affairs. Viewing the situation from this standpoint, and having entered the heart of spring trade, would it not be well for each of us to do our part to aid in restoring confidence? We believe this to be far the best policy to pursue.

Weed & Co.

THE PITTSBURG TRADE.

Rain for two weeks past has had a somewhat dampening effect on business, yet there has been a pretty fair amount doing. The coal mining districts are in the worst condition, as wages are cut down to the lowest notch, and work is scarce even at the low price. On the other hand, times are good in the coke districts, as they are well employed, and the mills and shops are having better pay-rolls recently than for a long time previous. There will be considerable work done in and around our city this summer. A new reservoir for our water supply was let a few days ago, at about $450,000. Some new traction lines are about ready to begin work. The Carnegie ore-carrying road is being pushed rapidly to completion; the cars for the same are building by a local concern; capacity, fifty tons each. The evolution in railroad matters is keeping pace with the production of steel mills.

Logan-Gregg Hardware Co.

THE PHILADELPHIA TRADE.

The bright weather of the past week is having its effect on trade, in imparting a more lively tone, although the low temperature has not caused a very heavy demand for spring goods which will probably come later.

An increase is noticeable in the number of orders received from salesmen, while mail orders are more generous in tone, showing that there is a demand for goods and that stocks are low. Certainly with prices as they are today, very little risk is run in buying for regular wants, as further declines seem scarcely possible, and in fact any demand should tend towards a stiffening in prices.

The bicycle trade is now getting under way, orders have been later this season than heretofore, and for this the backward weather is perhaps partly responsible.

Bicycle sundries are largely called for and it is difficult in many cases to get them sufficiently fast to fill orders. Probably every purchaser of a bicycle is surprised to find the number of accessories which seem to be needed before he is properly fitted out, and the sundry trade is one which is likely to last for some time, hence the unusual demand.

Collections may be reported as better, a marked improvement being noticeable in the last thirty days. It is hoped this comes from the increase of employment given to many workmen, and if so this improvement should be steady and gradually increasing in volume. After all, as is often said, wages are the basis of trade, and only in times of good wages can we expect good trade; good trade and good wages go together, and it may be added, that high prices and good times are always seen in company, while low prices and hard times are inseparable companions.

Biddle Hardware Co.

THE BALTIMORE TRADE.

Yes, we are quite busy. No rush, it is true, but just comfortably active. As yet we have had no occasion to work "double turn," nor do we claim, like the wire nail mills, that we are thirty days behind in filling orders; but each day brings us sufficient business to keep us going for that day, and still leave something for the next morning.

Throughout the month of April there has been a gradual expansion of trade, differing entirely from the spasmodic features which characterized business during the first quarter of the year. Much of the buying now being done, under normal conditions, should have increased the sales during February and March. Uncertainty and doubt,

NEW YORK WIRE CLOTH CO.,

102 Chambers St., New York.

WORKS LOCATED AT YORK, PA.; BROOKLYN, N. Y.; HOMER, N. Y.; HAMILTON, N. Y

——MANUFACTURERS OF——

PAINTED HARD STEEL WIRE SCREEN CLOTH.

DOUBLE SELVAGE, STANDARD QUALITY.

Owners of the following brands of Wire Cloth: **YORK WIRE CLOTH CO.**, York, Pa; **THE WIRE FABRIC CO.**, Homer, N. Y.; **J. H. DE WITT'S SONS**, Brooklyn, N. Y.; **HAMILTON WIRE CLOTH CO.**, Hamilton, N. Y., and the **DIAMOND** Brand.

the timidity of conservatism, is slowly melting away, and this delayed business is forced upon the market by the pressure of actual needs. Acting as a reviviscent it is welcome.

And yet, amid all this glad sunshine of spring weather and improved trade conditions, the voice of the "calamity howler" is heard. You cannot expect the song of a lark from the throat of a frog. He can croak—only croak—and to himself he finds melody in the croaking.

The *Resurgam* of the Easter anthem may have a trade significance, that after a long period of general depression, our season of sackcloth and ashes is ended—a resurrection into a newer and better order of things is at hand.

TABB & JENKINS HARDWARE CO.

THE COLUMBUS TRADE.

The writer was busy last week moving. Someone was mean enough to intimate that I moved because it was cheaper than to pay rent. I won't do it again, because I find moving expensive. Trade has been full of vim with us for the past three weeks, and we think it will be good through May and June. Then comes a resting spell, and we go fishing; that is, one member of the firm goes fishing, the other member don't like fish. We have had a great many complaints from our customers on account of slowness of shipping iron and nails, and especially iron. We find we are not the only ones who have not been prompt, as we have been tendered orders that were placed with other jobbers who could not fill. One Pittsburg manufacturer has been so slow that farmers who set posts will have to reset them, as they have rotted off, and still the wire has not been shipped. Farmers find it much cheaper and less work to buy up dry oil wells and cut them up into post holes instead of digging them. Prices on most goods remain about as they have been for some time. Wire is weaker, and about 10 cents per 100 pounds off in price. Nails are scarce, and manufacturers have no trouble in selling at the price ruling for some time for prompt delivery. We don't think many nails are being sold for future delivery. The weather has been wet and cold, and the grass and wheat have suffered. We think a few warm days will bring it out all right.

SMITH BROS. HARDWARE CO.

THE DAVENPORT TRADE.

The sun shines again! The sound of the shovel (trust shovel) clearing the brick paved streets is heard, showing that spring has surely arrived. The commercial tourist is touring again throughout the land, and the sound of his voice is heard in every town and hamlet thereof. May success attend him, for he deserves more than he receives, and without him we would have to withdraw from the jobbing trade and start a department store. The department storekeepers are the only people who ignore the traveling salesmen and who attempt to place their wares upon the market without employing these gentlemen who have done so much for the world's commercial interests. If these stores are successful, then the positions now occupied by traveling salesmen will soon be filled by boys and girls who should be in school, for they can be employed at $2.50 to $3 per week. Will the great army of commercial travelers quietly submit to this innovation and give up their positions gracefully?

The Mississippi climbed over the danger line this morning, and the Iowa legislature has passed the manufacturers' bill, so we are in no immediate danger of drouth or thirst.

The roads are improving; seeding is fairly under way; money more plenty; trade better and collections—well, we make a collection now and then.

SICKELS, PRESTON & NUTTING CO.

THE OMAHA TRADE.

Extremely backward weather prevailing during the early part of this month, has to some extent detracted from the anticipated movement of goods. A backward spring, such as we have with us at this time, always has its effect on trade; nevertheless it may be considered as fully up to the average, with collections a little in advance of that. Prices are holding steady, though the extreme anxiety on the part of many dealers to secure a larger share of the trade than conditions would warrant, makes it necessary to sell a great many goods on a closer margin than is comfortable or pleasant.

Farm produce sells extremely low, with the exception of hogs and cattle, which are paying large dividends to their fortunate possessors, which does much to encourage a more hopeful feeling for the future.

RECTOR & WILHELMY CO.

THE BIRMINGHAM TRADE.

The letting of the contracts to build the line of railroad from Columbus, Miss., to Montgomery, Ala., brought together quite a large number of contractors who were in search of work. This is said to have been one of the most largely attended lettings that has occurred for some time. We feel encouraged to see railroad work being given out, as the building of railroads means the development of the country, and will result in growth of population which is the basis of increase of permanent trade. This, also, will be the means of circulating considerable money in this section of country, giving employment to labor and creating demand for supplies of all kinds, and is therefore an encouraging sign. The farmers seem to be making great preparations for large crops this year, and the sale of agricultural implements has been large.

The heavy rains and floods have interfered to a considerable extent in some sections of the country, but the waters are now receding and the weather is beautiful, when all can go to work with renewed and increased vigor. There is considerable work in the erection of residences and other buildings, in and near our city, with an increased demand and better market for real estate, and giving additional trade in the line of builders' material. The bicycle trade seems to be growing rather than falling off, and the prices are getting down to the point where most anyone can ride a wheel who is inclined to do so. It appears that this will be permanent trade, and that the wheel has come to stay.

At first the street car man and the livery stable man

looked upon the wheel with disfavor, lest it should curtail their patronage, but after a little while all of these things will adjust themselves, and the public will be benefited rather than otherwise.

The Hardware trade is discussing the tariff bill to some extent, especially in regard to cutlery, as that seems to be the item which will affect them mostly in this section of the country for the present, and are glad to know that the Dingley bill will have considerable difficulty in getting through the Senate. Most of us would be glad if it failed altogether, so as to give the Wilson tariff a better opportunity to demonstrate its superiority over the McKinley tariff. It has resulted in increased exports of manufactures, with a lessening of the imports, and is accomplishing just what the advocates of the Dingley bill claim they will accomplish, viz., in the lessening of imports and increasing of exports. As long as we can keep the balance of trade in our favor, thus keeping the gold balance in better condition, we will have made a strong argument in favor of settling our finances on a just and sound basis, and make it more difficult by the time 1900 shall arrive, for the advocates of the 16 to 1 policy to succeed. There is no good reason why, with proper management, that the United States should not become the financial center of the world instead of London, as we have a larger population and much larger resources. It is true it will take some time to accomplish this, but when the world once understands that it has become a fixed policy of our country to always return to the depositor as good money as he leaves, then people will more readily deposit their money in the financial center of our country.

MOORE & HANDLEY HARDWARE CO.

THE MINNEAPOLIS TRADE.

Trade has been very dull here since last September. The presidential election was too late in the season to benefit us, as far as fall trade was concerned. Then came the most severe winter and the largest quantity of snow that this country has seen since 1882, and perhaps even worse than then. Railroads blockaded and country roads impassable; with the snow going off came freshets that have done immense damage, retarded usual farm work, plowing and seeding, and many acres that are generally devoted to wheat are now first-class duck ponds. All this has been sufficient reason for dull business for the past seven months. We are now having bright weather and good drying winds. The farmers are busy at work putting in their crops, and we hope before long business will be in normal condition again.

Our lumbermen have suffered severely through floods carrying away booms, and many millions of logs went over the Falls of St. Anthony and are distributed along the Mississippi. This will retard the beginning of the sawing season, as nothing can be done until new booms and piers are constructed, all of which is very unfortunate for the laboring men, as but few of them were employed in the woods during the past winter, and were depending upon work in the mills and yards here to support thieir families.

The price of nails in this market is very low; as near as we can learn, lower in proportion than at any other point, with good prospect of even lower prices prevailing in the future. On other lines they remain about the same. We are affected, of course, by prevailing low prices on screws, carriage and machine bolts, etc.

There will be but little building here this spring; more repairing work than usual. It will take at least another good crop and fair prices to improve business to any considerable extent. We believe there will be an increase in volume of business in the Hardware line from now until the end of the year, which will show up better than the corresponding time for the past two or three years.

W. K. MORISON & CO.

THE DENVER TRADE.

Trade is still improving and as the season opens, prospects are encouraging. Late and heavy snows have caused a tie-up in some of the mountain towns and bad roads in lower altitudes are something of a drawback. Another month will open business to all sections and by that time we hope to report a very satisfactory condition. Season goods are being placed early and the prospect of advanced tariff is stimulating business in the lines which it is expected to affect. GEORGE TRITCH HARDWARE CO.

THE ST. PAUL TRADE.

In our last communication, we reported an improved condition of business over what we had previously been experiencing. We did not say that there was no room for further improvement, and while we can now say that there has continued to be a very marked increase in sales during the past two weeks, we do not want to be understood as being, even now, fully satisfied with the present condition, but we expect, in fact, we firmly believe, that as spring advances, business will continue to revive, and that on the 1st of July we shall look back with complacent satisfaction on the results of the first half of the year.

Farmers are now seeding, and reports come to us that the ground is in excellent condition at the present time to produce a crop. The recent advance in the price of wheat is an encouraging feature, although but a small part of last year's crop is now in first hands. The hope that the coming crop will be sold at this advanced price, or a larger, gives courage to the farmer, and will induce him to make more liberal purchases than he otherwise would. What we want to make business good is, first confidence, and later more confidence. C. W. HACKETT HDWE CO.

THE TOLEDO TRADE.

The spring time has at last entered this part of the country, to-day being the first pleasant and warm day we have had this season.

Trade in general is backward. In comparing our business with the same time for 1896, we really have no cause to complain, when we hear from other sources that it is not up to anything near what it was in former years. While the volume of our business at the present time for the year 1897 does not amount to as much in dollars and cents as for the same time in 1896, still, owing to the low

Cleveland Bicycles.

THE KEEN BUYER

Always compares the price of an article with its honest value as he understands it; but it is not always easy to determine the value of a **Bicycle**, as beneath the gaudily finished exterior of a cheap machine there lurks defective material and inferior workmanship.

Our '97 catalogue tells how to invest $100 or $75 in a bicycle and get the **value of your money** Write for it; a postal will do!

H. A. Lozier & Co.,

CLEVELAND, OHIO.

Send 4 cents postage for our booklet, "Shakespeare and the Bicycle." 12 special designs in colors by F. Opper, of "Puck." Mention this paper. . . .

prices that goods are being sold at, at the present time, we think the volume in tonnage is more.

We find that dealers throughout this territory are buying in more liberal quantities; in fact, we think that if any brisk demand for goods would arise the small dealers would have to purchase quite heavily in order to supply such demand, as we find stocks throughout are light. Prices in general are fairly well maintained, although they are very low, in fact, prices from the manufacturers and jobbers at present time are lower than they were last January. There seems to be a general tendency towards a lower valuation on almost everything, nor do we believe that the time of much higher prices will ever come again, unless through some unforseen event, or might be advanced through speculation.

These lower prices are being brought about by improved methods of manufacturing and improved machinery.

Goods that are in demand at the present time are mostly farm goods, such as rakes, hoes and forks. Poultry netting is in quite a strong demand. Other goods that are selling freely are screen doors, screen windows and paints, and there is also quite an increased demand for shelf Hardware.

We look forward to the future with hopes of better trade.

Probably we will not see much increase for the spring months, but we do believe that we will have considerable better trade next fall over the previous year.

Labor, in Toledo, is fairly well employed, although we find some idle men, but we think Toledo is in better shape today than almost any other city of its size that we know of. This, no doubt, is being brought about owing to the large oil industries that are adjacent to Toledo, at least travelers inform us that Toledo is one of the liveliest cities for business that they come to.

Let us all take confidence in the future, and have faith in this Grand Old Republic of ours, and we will again see better times. "Selah." STOLLBERG & CLAPP CO.

Yale & Towne Election.

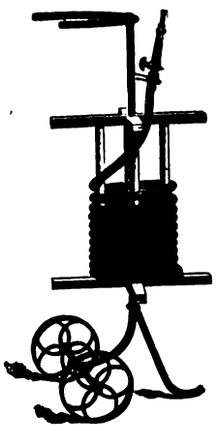
At the annual meeting of the Yale & Towne Mfg. Co., held at Stamford, Conn., on Thursday, April 22d, the folboard of directors was elected; Directors: Henry R. Towne, Schuyler Merritt, George E. White, Stamford; Thos. F. Keating, New York; Walton Ferguson, Charles A. Hawley, Albert J. Hatch, Stamford.

At a meeting of the board held immediately thereafter, the following officers were elected for the ensuing year:

President, Henry R. Towne.
Secretary, Schuyler Merritt.
Treasurer, George E. White.
Assistant Treasurer, Thomas F. Keating.

It is our duty to hustle at all times, but the time when hustling counts most is when business is dull.

Iron Bar 2000 Years Old.



S. T. Wellman, the metallurgist, of Cleveland, Ohio, has a portion of a round bar of iron—and a few like pieces are held in the United States—that antedates the Christian era by two or three centuries. The iron, which had been originally hammered into plates and was deeply rusted from age, was found a few years ago by Dr. Karl Humann in the ruins of the Temple of Artemis Leucophryne, at Magnesia, made from a portion of its memorial tablet. This was presented to Bismarck in April, 1894. It bore the inscription in German: "For you Prince Bismarck, the Iron Chancellor, Hermogenes forged this iron at Magnesia 200 years B. C. Humann found it in the Temple of Artemis after 2000 years, and sent it to Hallbauer, who gave it the form in which it shall bear witness that your deeds shall outlive millenia."

At the time of the presentation to Bismarck *Stahl und Eisen* gave a photographic reproduction of the plate and an account of the discovery of the iron. The Temple of Artemis, one of the most magnificent of ancient monuments, was rebuilt about 300 B. C., though by some the date is put at 200 B. C.

The metal is described as approximating steel in its composition, though closely akin to malleable iron. It was made at a low temperature and great care was necessary in the forging. It was found rather difficult to roll the pieces that were preserved as relics, these having a diameter of about one-half inch.—*Newark Sunday Call.*

The fame of the Krupp works at Essen, Westphalia, as the vastest industrial establishment in the world, appears to be still maintained. At present the establishment consists of two steel works with fifteen Bessemer converters, four steel works with Siemens-Martin open-hearth furnaces; iron, steel, and brass foundries; puddling, melting, reheating, and annealing furnaces; draw benches; a hardening and tempering department; file manufactory; rolling mills for plates, rails, and tires; railway spring and wheel manufactory; steam hammers, forges, axle-turning shop, boiler shop, engineering and repair shops. Besides the above and many other departments at Essen connected with the making of cannon, there are steel works at Annen, in Westphalia, three collieries in Westphalia, besides participation in several others; 547 iron mines in Germany, various iron mines in Bilbao, in Spain; four iron works, including one at Duisburg, one at Engers, one at Neuweid, and one at Sahn; various quarries of clay, sandstone, etc., four steamers, and artillery ground at Meppen, Hanover. The property owned extends over nearly 2500 acres, and the number of hands employed in the mines and steel works is about that figure. There are altogether 1500 furnaces of various kinds, twice as many engines and machine tools, 22 roll trains, 111 steam hammers, two hydraulic presses, 263 stationary boilers and 421 steam engines, representing together a force of 33,139 horse power.—*N. Y. Sun.*

Evolution of the Whistle.

Here is the story of the evolution of the locomotive steam whistle: It was invented because of the destruction of a load of eggs. When the country roads were for the most part crossed at grade the engine driver had no way of giving warning of his approach except by blowing a tin horn. The horn was far from being a sufficient warning. One day in the year 1833 a farmer was crossing the railroad track on one of the country roads with a great load of eggs and butter. Just as he came out upon the track a train approached. The engineman blew his horn lustily, but the farmer did not hear it. Eighty dozen of eggs and fifty pounds of butter were smashed into an indistinguishable mass. The railway company had to pay the farmer the value of his butter, eggs, horse and wagon. A director of the company, Ashland Baxter, by name, went to Alton Grange, where George Stephenson lived, to see if he could not invent something that would give a warning more likely to be heard. Stephenson went to work, and the next day had a contrivance which, when attached to the engine boiler, and the steam turned on, gave out a shrill, discordant sound. The railroad directors, greatly delighted, ordered similar contrivances attached to all the locomotives. This has developed into the locomotive whistle as we know it.—*Industrial World.*

M. Berthelot has recently published in the *Comptes Rendus* analyses of weapons, tools, etc., from Tello, in Chaldea. Their date is put from 4000 to 3000 B.C. A large lance and a hatchet were found to be approximately pure copper, and another hatchet was of copper with traces of arsenic and phosphorus, by which it seems to have been hardened. No trace of tin was present in any case. Thus in Chaldea an "age of copper" seems to have preceded the "age of bronze." An egg-shaped object from the same locality, weighing 121 grains, was of iron; an ingot of white metal was 95 per cent. silver; a leaf of yellow gold was found to contain considerable quantities of silver.—*Scientific American.*

How to Spoil a Good Knife.

"There's a knife I bought in your store awhile ago and the blades have given out," said a countryman in a large Hardware store yesterday afternoon. "What's the matter with it?" asked the clerk, and the customer proceeded to relate how the "temper" had left the blades. He said he used his knife chiefly to cut plug tobacco and apples, and the confession led to a discussion of knives in general, during which the countryman was given the information that the acid in apples and plug tobacco would draw the "temper" out of the best knife blade ever made. "Very few people understand that fact," said the salesman, "but it is a fact just the same. A knife that is used to cut apples and tobacco will give out a great deal sooner than it would had it been used only on the hardest wood. A great many people sharpen pencils with a knife and then kick when the blade becomes dull or nicks. The reason is that the lead is gritty, and when it shows its effect on the blade the complaint is made that the steel is either too hard or too soft.—*Grand Rapids (Mich.) Herald.*

Until 1720 the greater part of the iron manufactured in the American colonies was produced in Massachusetts; in 1750 Pennsylvania became the leading iron-producing State and maintained the supremacy.—*Industrial World.*

A School for Salesmen.

In a recent number of the *Scientific American*, reference is made to a school for salesmen in connection with a manufacturing plant in this city, which would seem to have found a new field of usefulness that should insure success.

Probably no industrial institution in the world off rs more unique features than does this plant, and the method by which the business is conducted. Aside from the manufacturing part of the business, great attention is paid to the systematic training of employes. Usually the salesman is a person who is given a sample of the article which he is intended to sell, and he is sent out among prospective buyers to work out his own salvation; but the proprietors of this manufacturing company determined that salesmen should be as carefully trained as professional men, and to this end they have devoted a great deal of time and expense. The school for salesmen is situated in the upper part of the factory, and is fitted up with a small theater, the seats arranged in a circle, and a stage is provided which represents the office of the business man or any kind of store, as a Hardware store, candy store, grocery store, etc.

The man who wants to become a salesman may take up a course in this school, at the company's expense, and, while sitting in the auditorium, he is enabled to see how a thoroughly skilled salesman approaches a probable purchaser and how he overcomes the objections which the merchant is almost sure to bring up. Then, in turn, the embryo salesman is required to take his place upon the stage and thus learn confidence and tact while he is watched by expert critics who are able to make friendly suggestions or criticisms when they are needed. The places at the side of the stage are filled with what appear to be store windows, which are utilized to display goods of various samples, so as to familiarize the salesmen with the art of window dressing, in order that they may make valuable suggestions to customers. It is little wonder that, under this system, salesmen which are turned out are able to act successfully as agents for the establishment which employs them.

Never Too Late to Learn.

The advice of an old sage in the business to a young man just starting on the road, and which is worthy of repetition, is as follows:

"Remember, son, the world is older than you are by several years; that for thousands of years it has been so full of smarter, better and younger men than yourself that their feet stick out of the dormer windows; but when they died, the old globe went jogging along, and not one person in ten million went to their funeral, or even heard of their death. Be as smart as you can, of course. Know as much as you can without blowing the packing out of your cylinder heads. Shed the light of your wisdom abroad, but don't dazzle people with it. And don't imagine a thing is so simply because you say it is so. Don't be sorry for your father because he knows so much less than you do. The world has great need of young men, but no greater need than the young men have of it. Your clothes fit you better than your father's fit him—they cost more money, they are more stylish; your mustache is neater, the cut of your hair is better, and you are prettier, oh, far prettier than 'pa.' But stop a moment, young man, and reflect. The old gentleman gets the bigger salary, and his homely, scrawling signature on the business end of a check will drain more money out the bank in five minutes than perhaps your handsome autograph can do during the balance of your mortal life. Young men are useful and they are also ornamental, and we all like them—but they are no novelties, son, oh, no, nothing of the kind. They have been here before. Don't be so modest as to shut yourself clear out, but don't be so fresh that you will have to be put away in a cooler to keep from spoiling. Don t be afraid that your merit will not be discovered. People all over the world are looking for you, and if you are worth finding they will find you."—*Tradesman.*

Iron for Malleable Castings.

Special iron has to be selected for castings that have to undergo conversion into "malleable cast iron." It must be very hard, and Lorne and Cumberland brands, in England, are largely used, with some white or mottled hematite. Gray iron is quite unsuitable. The castings should show a fine brilliant white crystalline structure when broken, and so hard that they cannot be cut or filed. They have to submit to annealing for several days before they can be operated upon. Small castings are packed in cast iron boxes in the annealing furnaces, and completely surrounded with iron ore or metallic oxides. Red hematite ore is mostly preferred. The ore can be used several times, but requires to have the addition of a little fresh unburnt ore every annealing. Small articles should be kept in the annealing oven at a uniform red heat in the iron boxes for six or seven days, but thick castings may require three or four weeks' annealing. Extra care is required in the molding of articles for malleable cast iron. The molds must be very clean, for any dirt or slag shows conspicuously when the castings have come through the annealing oven. Malleable cast iron is undoubtedly of great value in such articles as wheels and pinions. Steel is, however, now superseding the use of malleable cast iron to a great extent, for it is little, if any, dearer. Sharp internal angles of all kinds in the patterns for steel or malleable castings should be avoided.—*Engineer* (*England*).

The Razor Trade.

In razors even more than in scissors the foreigner has taken Sheffield trade. Hamburg gave us hollow-ground razors, and they were only slowly followed on this side. Even yet there are Sheffield makers who send their blades to Germany to be hollow ground, although that is not so frequent as it was. As long as a well-finished hollow-ground German razor can be sold at about the price it costs in Sheffield to produce a razor blade, the Germans will keep the business. The Sheffield workpeople lost a great opportunity when hollow-grinding was commenced. They ought then to have gone vigorously into the business, instead of letting the foreigner have it all to himself. Now the hollow-gronnd razor is preferred all round and Sheffield has to work up lee way. One of our local manufacturers affirms that the Germans stamp their blades so perfectly that the grinder is left very little to do, putting on the blade a truer edge, and all the blades being uniformly excellent. The great Indian market for razors is being largely covered by Solingen firms with their cheap but well-made razors. The Hindoo is the greatest shaver in the world, and as he rarely uses his razor more than once, having no means of putting it right, the quantity used in India is enormous.—*Hardware Trade Journal.*

"My son," said the graybeard, "you are about to go forth to do battle with the world."

"Yes, father," answered the young man.

"One of the first things you should learn, my boy," the old man continued, "is to learn to say 'no'."

"I think I understand."

"I dunno whether you do or not. The point I am trying to get at is that the habit of saying 'naw' and 'nit' was all right while you were in college, but it ain't the correct thing for a business man."—*Cincinnati Enquirer.*"

HARDWARE is printed for men now on earth.

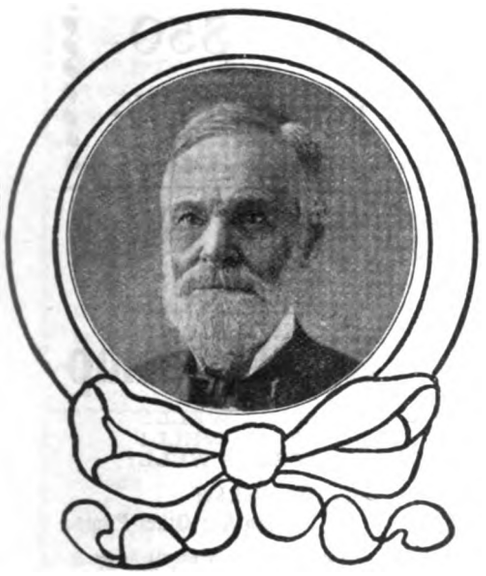
The President of the United States.



What the President of the United States Thinks About Our Enterprise.

William McKinley addressed the Convention of The National Cash Register Company, at Dayton, Ohio, October 22, 1895.

"It gives me great pleasure," he said, "to meet you here, and to congratulate you upon the splendid enterprise in which you are engaged.

"I have known The National Cash Register Company for many years. I have known the splendid progress of that industry in the past, and my only wish for you is that the business of this country from now on may be such that there will be a great demand for your cash registers, and that we will be able to register more cash than ever before in the transactions of this state and the country at large.

"What we want, no matter where we live and no matter in what occupation we may be engaged, is the highest prosperity possible for our country, and whatever will secure such prosperity, no matter what it may be."

The Secretary of State.

What the Secretary of State Says About Our Work.

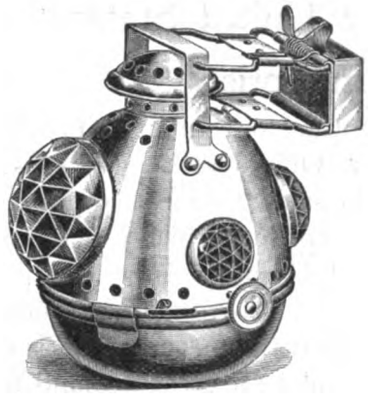
On Saturday, October 24, 1896, Hon. John Sherman addressed the International Convention of The National Cash Register Company. He said:

"It gives me great pleasure to address an assembly of this kind upon whose faces are written intelligence, ability and integrity. Our country is made greater by the progress and strength of its industries. And among these industries none has a better reputation for integrity and strength than The National Cash Register Company.

"You people are engaged in a very great work—properly taking care of their cash for retail merchants. If the cash is right everything else will be right.

"There is plenty of cash in this country, and if it is well taken care of and properly handled the cry of hard times will be heard no longer."

John Wanamaker.
Twenty National Cash Registers in use in his Philadelphia Store.



What the Retail Merchants of the World Say About National Cash Registers.

We are proud of this indorsement by the president of the United States and by the secretary of state, but we are prouder still of the indorsements of our company and of our registers by more than one hundred and fourteen thousand retail merchants throughout the civilized world who have purchased registers from us and are now using them.

We have testimonials from thousands of these merchants, and to any retailer who desires we shall be glad to send copies of letters written by merchants in his line of business who reside in his immediate vicinity.

Send us your name, address, business, number of clerks in your store, and state whether or not you employ a cashier. We will send you in return, free of charge, a handsomely-printed description of a cash register system used in stores like yours. You place yourself under no obligation to buy. Address Dept. H, The National Cash Register Company, Dayton, Ohio.

CONDENSED BUSINESS WISDOM.

"IN YOUR COLUMNS FROM THE FIRST."

Van Wagoner & Williams Hardware Co., New York and Cleveland. [*Hinges, Anvils, etc.*]: Having been represented in your columns almost from the first issue, we have a feeling of pride and pleasure in your achievements.

"VERY USEFUL TO US."

J. A. Ross & Co., Boston, Mass.: We find HARDWARE very useful to us, as well as interesting. Considering the quantity and quality of matter in each issue, the subscription price is very low for a semi-monthly magazine.

"SUBSCRIBE WITH PLEASURE."

Brown & Gilbert, Boston, Mass.: Please find enclosed $1 in payment for HARDWARE. We have found HARDWARE very useful and instructive, and subscribe for the coming year with pleasure.

"ADVERTISEMENTS HAVE GIVEN RESULTS.

W. C. Heller & Co., Montclair, N. J. [*Mail Boxes, Grips, Plows, etc.*]: Our advertisements in your columns have given results that assure us that they are closely watched by the trade.

"A DOLLAR WELL INVESTED."

John T. Merimee, St. Mary's, Ky.: Enclosed please find $1 in payment for another year's subscription to your valuable paper—a dollar well invested, I believe, for it keeps me posted.

"PRIZED IT VERY HIGHLY."

A. J. Pellum, Ranger, Texas: Enclosed find money order for $1. Please credit my account with the same. I prize your paper very highly and cannot afford to be without it.

"VERY MUCH PLEASED."

The Banks Hardware Co., Henderson, Ky.: Enclosed find Post Office order for $1, our subscription to HARDWARE. We are very much pleased wi h the publication.

"JUST THE PAPER RETAILERS WANT."

Henry E. P. Pritchard, Philadelphia, Pa.: Enclosed find $1 for which please send me HARDWARE for one year. It's just the paper retailers want.

"THE BEST WE HAVE SEEN."

Massey & Thompson, Monroe City, Mo: Place our name on your subscription list. Your paper is the best thing we have seen in that line.

"ONE OF THE BEST MEDIUMS."

Lane Bros., Poughkeepsie, N.Y. [*Hardware Specialties*]: One thing we know—we get the trade, and have good reason to believe that HARDWARE has in the past been one of the best mediums for our large trade and the popularity of the Lane goods.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

"BEYOND CRITICISM."

Wm. Jessop & Sons, New York. [*Steel manufacturers*]: Another five years as proportionately successful as HARDWARE's last will place it almost beyond the criticism of friends or competitors.

"IS JUST RIGHT."

Alling & Lodge, Madison, Ind.: We enclose $1 to pay for our subscription to HARDWARE for one year from date. Your paper is just right; don't make it too big so one can't find anything in it.

"WORTH DOLLARS TO DEALERS."

J. T. Morris, Cleveland, Ohio: HARDWARE is a bright, spicy journal, and I look forward to its arrival as one of the family. The Prices Current quoted by it are worth dollars to any dealer.

"OF INTEREST TO LIVE DEALERS."

Van Voorhis & McNair, Crawford, Neb.: We like the journal very much. It always comes to our desk full of bright, sound matter, that cannot but be of interest to all good live dealers.

"NEARLY FROM THE BEGINNING."

Samson Cordage Works, Boston, Mass. [*Cordage*]: We have had our advertisement with you nearly from the beginning, and we know no reason why we should not continue it.

"A VALUABLE ADVERTISING MEDIUM."

Harvey Hubbell, Bridgeport, Conn. [*Machinery and Tools*]: We are very much pleased with your paper, and consider it a valuable advertising medium.

"EXPERIENCE MOST SATISFACTORY."

Partrick & Carter Co., Philadelphia, Pa. [*Electrical Goods*]: Our experience as advertisers with you has been of a most satisfactory character.

Changes and Removals

Abington, Mass.—George E. Fairbanks and George E. Gormley have purchased the business of Washburn & Davie.

Ada, Minn.—Larson & Lystad; succeeded by Theodore Lystad.

Beeville, Tex.—Burrows Bros. have begun the erection of a large brick business house, which they intend occupying at a later date.

Boone, Iowa.—W. W. Mellor intends removing his Hardware store to Luther, where he will add to the stock, and have a good surrounding country to supply.

Chambersburg, Pa.—W. H. Walker & Co. have sold the block in which their store is located to C. P. Speer.

Champaign, Ill.—Bryant & McConney are preparing to open up their new stock of Hardware at No. 10 Main Street. They will not at present add the stove or tinware departments.

Chillicothe, Ill.—D. B. Bland; succeeded by E. G. Burner.

Choice, Minn.—Elefson Bros. have dissolved. J. Elefson will continue the business.

Crawfordsville, Ind.—W. F. Jurgeng has purchased an interest in the business of Neal & Boyce.

Eldorado Springs, Col.—R. R. Stephens & Son have moved their Hardware stock from the Cruce Building to Conway's Building, opposite the Grand Central Hotel.

Flora, Ind.—J. A. Crecraft has purchased an interest in the business of E. Clingenpeel.

Gananoane, Can.—Britton & Donovan, general store; D. Darling, grocer; E. H. Ellis, Hardware, and H. C. Taylor, dry goods, intend amalgamating their various businesses into a new department store under one roof, and hope to open the same by May 1st.

Hempstead, Tex.—Galewsky Bros. are reported to have dissolved partnership.

Markesan, Wis.—Edward G. Loebel, sold to Charles F. Hanson.

Mattoon, Ill.—The Moran & Phillips stock has been purchased by W. E. Maxey.

Mechanicsburg, Pa.—A. W. Milleisen is improving his Hardware store by placing a new front in position, which will greatly improve it.

Mexico, Mo.—Potts & Hord, succeeded by Hord & King.

Moline, Ill.—It is probable that Quick & Orum will move from their Third Avenue location to the McKinnie block.

Monroe City, Mo.—Massey & Thompson, sold to C. B. Payne.

Montpelier, Vt.—Fred Blanchard has his Hardware business installed in his handsome new store in the Lawrence Block. His store is 83x34 feet, and among the most commodious and convenient in the town.

Mt. Sterling, Ill.—J Breidenbend has purchased the Hardware stock of Bordenkiercher & Greenwell.

New Haven, Conn. — Linsley & Lightbourne, Hardware dealers at No. 33 Broadway, have secured a lease of the adjoining property as far up as No. 39, and by extensive alterations have connected the whole into a mammoth warehouse, enabling them to carry a much larger stock of Hardware and agricultural implements.

North Hampton. Ohio.—J. P. Hackett is closing out his business.

Plattsburg, Mo.—Porter & Thomas, sold to D. Walker.

Redfield, S. D.—E. B. King has moved stock to his own building.

Richford, Vt.—Ayer & Ladd have dissolved, and Mr. Ladd will move back to Enosburgh Falls, where he intends to go into business.

Salisbury, N. C.—Robert L. Shaver intends building a brick business house, which will be occupied by W. H. Smithdeal as a Hardware store.

Saratoga Springs, N. Y.—G. F. Harvey has been succeeded by the Towne Hardware Co., of which O. D. Towne is senior member and general business manager. Mr. Towne has had the business management of the store for the past two years, and under his management the sales have increased from $25,000 to nearly $70,000 per annum.

Scranton, Pa.—Jas. B. Gilhool's Hardware store is in course of being improved by a very handsome new front, in connection with which the interior will also be renovated in a thorough manner.

South Omaha, Neb.—A. C. Raymer has closed his N Street Hardware store, moving his stock of goods to Omaha, where he will continue his business.

Smyrna, N. Y.—W. P. Briggs has been succeeded by George A. Munson.

Tracy, Minn.—Taarud & Hangen have purchased the city hotel at this place, and will move their Hardware store to this city at an early date.

Troy, Ohio.—Coles, Baird & Smith, succeeded by Coles, Schaible & Smith.

Van Wert, Iowa.—Imhoff & Son have sold out their interest to Messrs. Thompson & Steer. M. F. Thompson, of the new firm, has been connected with the firm of Imhoff & Son for the past year. Mr. William Steer is a resident of Truro, Iowa.

Warren, Ohio.—The Warren Hardware Co. has secured a certificate for increasing its capital stock from $33,000 to $50,000.

Webster, N. D.—McConnachie & Co. have dissolved.

Winona, Minn.—G. A. Hess contemplates moving to a new location.

Business Embarrassments

Cannington, Ohio.—John R. May has assigned to J. W. May.

Norwalk, Ohio.—The Butt & Peck Co. have been closed by the sheriff. Liabilities, exceeding $21,000.

Sanford, Fla.—F. B. Bruce, Hardware and sporting goods, has assigned to E. B. Durbin. Liabilities are about $2500. Assets about $2000.

Burglaries in Hardware Stores.

Elsie, Mich.—L. B. Downey, cutlery, etc. Loss mounting to about $100.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Baltimore, Md.—The partnership heretofore existing between Richard Cromwell and Frank B. Sloan, under the firm name of C. Sidney Norris & Co., has been dissolved, Mr. Sloan retiring. Mr. Sloan will continue the manufacture of Hardware specialties, under the name of Frank B. Sloan & Co., at No. 112 West Fayette Street.

Chattanooga, Tenn.—An immense boat-oar factory will be built in Chattanooga at once. The stock has all been subscribed and application for a charter filed. The capital stock will be $50,000. The incorporators are E. G. Richmond, C. V. Payne, Sol Moyses, W. A. Sadd and J. L. Conner. The company has several sites in view, but has not definitely decided upon a location, further than that it will be located on the river and on high ground.

Hamilton, Ont.—The Dowswell Mfg. Co., Limited, is to have a capital stock of $75,000 in $50 shares. It is to manufacture and deal in churns, cream separators, butter-workers and other dairy specialties and utensils, and washing machines, mangles, etc. It consists of G. B. Dowswell and others, of Hamilton, and Mrs. Julia Eliza Cowan, Gananoque.

New York, N. Y.—The "Air Lighter Co." was incorporated by C. A. O. Rosell and others, to manufacture gas tips and burners and other inventions in connection with gas, oil, or spirit lighting. The capital stock is $800,000.

Saddle River, N. J.—The Sterling Machine Tool Co., with salesroom in New York City, has been organized under the laws of New Jersey with head office at Saddle River. The officers are: President, Henry F. Frevert; secretary, Bernard O. Bogert; treasurer, David G. Phillips. The company is doing an extensive business in metal-working machinery.

Providence, R.I.—The United States Nut & Bolt Co. have been incorporated, with a capital stock of $1,000,000. The works of the company will be at this place.

Improved Conditions.

Albany, N. Y.—The Troy Steel Works at Breaker Island began operations in full this month. The blast furnaces have been running for eight or nine months, employing 500 men, and the resumption of work in the steel making department will provide work for 1000 additional hands. The steel works have been shut down since January 14th. The company has large orders ahead and the brighter prospects of the future led the directors to their decision.

Baltimore, Md.—The Baltimore Enamel Co. will increase its capital stock from $25,000 to $100,000 and expend the increase on extensive additions and new machinery for its plant. The capacity of the works will be increased threefold. About 100 hands are now employed. All kinds of enameled ware are produced, using a process of which this company alone has the formula.

Canton, Ohio.—There are many indications of increased activity in Canton manufacturing establishments, which will be glad news to all Cantonians. The Joseph Dick plant, which has been idle for a few weeks for needed repairs, has resumed operations. The firm will begin filling an export order from their house in Mexico City, Mexico, and will begin shipping as soon as the machines are completed. Mr. Dick reports quite an increase in foreign trade, and the indications are that the excellent reputation of this establishment for steady running will be fully sustained the coming season.

Cohoes, N. Y.—The Cohoes Tube Works will open a large warehouse and office in Troy, at Nos. 411-415 River Street. Three large four-story brick buildings have been practically made into one, and these, with a two-story building 60x30 feet situated in the rear, are occupied, and the fitting and arrangement of the buildings to meet the needs of the business are nearly complete. The works, which will remain at Cohoes, produce wrought iron pipe of all kinds.

Kalamazoo, Mich.—The Kalamazoo Radiator Co. are giving their plant a thorough overhauling, building new machinery and reconstructing old, and when this work is completed, will start up prepared to do a large business. The superintendent says the shop will be as well equipped as any in the country, and with improved methods he predicts a continuous run.

Middletown, Conn.—Wilcox, Crittenden & Co., said to be the oldest firm of ship chandlery in the United States, started on ten hours, six days a week. This is the first time in two years that they have run on full time. The firm employs 200 hands.

Muir, Mich.—The Muir washing machine factory has resumed operations recently, after a shut-down of several months. The company has been reorganized with Capt. J. O. Probasco as president.

Newcastle, Pa.—The industrial situation is more promising than for years. The wire nail mill has been put on triple turn and the force of workmen at the rod mill has been increased. The tin-plate works are running in every department, and the same can be said of the tube mill. At the keg factory recently five men and nineteen boys broke all previous daily records by making 4500 kegs. The wire nail mill is using on an average of 20,000 of these kegs weekly.

Niles, Ohio.—Contracts were let recently by the Falcon Iron & Nail Co. for the buildings and machinery for the new addition to its mill at that place. The main building will be 192x70 feet, and the warehouse to be built adjoining will be 70x62 feet. The buildings will be of frame, clad with sheet iron. Lloyd Booth & Co. were given the contract for the hot and cold rolls with which the mill will be equipped and the contract for the engines necessary in the driving of the machinery was awarded to William Tod & Co.

North East, Md.—A meeting of the stockholders of the Stevenson Wrench Co. was held recently, at which it was decided to make a call for the unpaid installments of the capital stock. It is expected that the factory, which was built during 1896, will be put in operation within a month.

Rome, Ga.—The Standard Scale Works will resume operations this month. The plant is owned by the Fairbanks Co., of New Orleans. For over a year the factory has been idle on account of the dullness of the market. The plant will be enlarged and its capacity greatly increased.

South Baltimore, Md.—The South Baltimore Car Works and the Maryland Nut & Bolt Works have about concluded arrangements for a consolidation. Plans to that end have been under consideration for some time. The plants of the two companies are located in the same buildings at Curtis Bay, and Mr. James Sloan has been president of both. He will be president of the consolidated enterprise.

Springfield, Ohio.—The Springfield Malleable Iron Co. state that they are running with 200 men full time, nine hours. They find the outlook encouraging and are receiving inquiries denoting an increase of business at an early date.

Tidioute, Pa.—A statement to the effect that the Tidioute Cutlery Works is about to remove back to East Randolph, N. Y., is going the rounds of the press. W. R. Dawson, secretary and treasurer of the company, declares there is no truth in the statement. The works are well established here and are doing a good business. To move would seriously interfere with the filling of the firm's orders. No such an idea, he declared, had been entertained by the officers of the company.

Tuscaloosa, Ala.—The rope and yarn mills of the J. Snow Hardware Co. are again moving. It is understood that arrangements have been made whereby the mill can dispose of its products in Birmingham. This is good news to Tuscaloosa, as it gives employment to some 175 laborers with a very neat weekly pay-roll.

Youngstown, Ohio.—The Brown Bonnell Iron Co. announces that its railroad spike mill will go on double turn and work indefinitely. The mill has not operated double turn for many months. The works will now continue with much brighter prospects than for some time.

Youngstown, Ohio.—The Morris Hardware Co. recently shipped a large lot of merchandise to Honduras, and it is only part of a large order from a firm there who want stoves, nails, pipes, and all kinds of Hardware. The duty on a keg of nails coming into Honduras is $4.22. Nails retail there at 18 cents a pound, payable in gold.

STERLING BELLS.

One Best THE Sterling.

Bells of all Description.
Send for Catalogue.

N. N. HILL BRASS CO.,
East Hampton, Conn.

Bells.

The belle of the ball on her escort leaned,
And so very happy the dear girl seemed,
That he took her aside to a cozy retreat
And told her the story that's always so sweet.

She perked up her lips, so enticing and fair,
And his own were reaching the heaven that's there,
When she said, "Dear boy, this is only a sell.
You'll first have to buy me that 'Climax' bell."

The new 1897 model "CLIMAX" Bell possesses without doubt the most improved Lock Clamp known. Can be adjusted to the Handle Bar quickly without removing the screw, thus saving all vexatious worriment in the operation, and at the same time presents a more attractive appearance than any other kind of an attachment.

We have just published a handsome little booklet to be carried in the vest pocket, containing lots of valuable information for the benefit of wheelmen. Send us a two-cent stamp and we will mail you a copy.

Specify KING PEDALS on your '97 wheels. Manufacturers will furnish them without extra charge if you insist upon it. Don't accept an inferior article.

King.. Pedals

PLEASE THE PEOPLE...

WE HAVE THEM IN STOCK.

PRINCIPLE SAME AS USED IN HUB BEARINGS.—OBSERVE THE CONSTRUCTION.

...The "King" Is the outgrowth of a number of years' experience in pedal manufacture. It has an endless steel band, made very strong and light, with the ball cups set into same and specially hardened. The adjustment which takes place in the outer end is very simple, and it is thoroughly protected from dirt by a dust-proof cap. The end next the crank has also a special dust-proof device. The special feature of this pedal is the large number of balls (fifteen) which are in the outer end, it having been found by experience that most of the strain of the pedal comes on the outer end. The rubbers, as will be seen, fit directly onto the rat-trap pedal, and are fastened securely by only one screw. This makes it very convenient, as the agent has at all times either a rubber or rat-trap pedal at the wish of his customer, by removing or adding the rubbers, which can be done in but a few seconds.

Guarantee.

We agree with the purchaser of each pair of "King" pedals to make good by repair or replacement, when delivered at our factory, transportation prepaid, any imperfection or defect in material or manufacture not caused by misuse or neglect; and that all imperfect or defective parts shall be referred to us before any claim or replacement shall be allowed. This guarantee continues for six months from the date of the sale by the agent.

THE A. L. MOORE COMPANY,

NEW YORK, 257 Broadway. | CLEVELAND, 121 Euclid Avenue. | CHICAGO, 204 Dearborn Street. | LONDON, 102 Fore Street.

Digitized by Google

To Bicycle Riders.

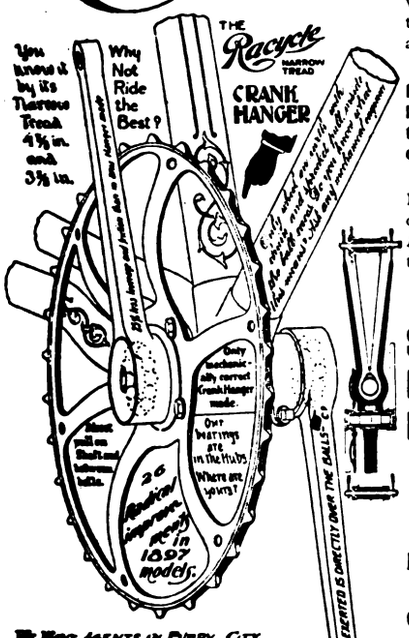
WE MAKE OUR TUBE OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL Is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted]

and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.



The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

THE POPE TUBE CO., Hartford, Conn.

THE Racycle NARROW TREAD

$1000.00 IN CASH

Will be paid to the first one who can demonstrate that the following assertion is not a fact:

The Racycle Crank Hanger has from 20 to 30 per cent. less pressure on its bearings than the Crank Hanger of any other Bicycle on the market.

All infringements barred. No bicycle considered without the consent of the maker. Address all communications to RACYCLE, Middletown, O.

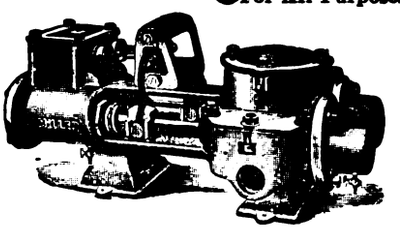
THE ONLY "PERFECTION" WATER ELEVATOR AND PURIFYING PUMP

Dealers, get in line and sell your trade an article you can guarantee for ten years. The chain or buckets is the principal factor in any elevator. The **Perfection Bucket** is cut by die in one piece of **Black Open Hearth Steel** folded together by double lap seams, and the entire chain **Galvanized** after **Construction.** Others are made of several pieces of galvanized iron soldered together. Simply this one feature is a sufficient guarantee that the **Perfection** has no equal. It is handled by all leading jobbers throughout the world. Call for the **Perfection.** Take no substitute.



It is the simplest structure for raising water on the continent; guaranteed never to freeze. . .

"USEFUL AS AN ADVERTISING MEDIUM."

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

ALASKA STOVE HARDWARE.

RESULTS ARE SO SATISFACTORY.

Capewell Horse Nail Co., Hartford, Conn. [*Horse Nails*]: We have been liberal advertisers in your journal for years, and the results are so satisfactory that we expect to be much more liberal for years to come.

PLEASED with RESULTS.

John N. Hager, Fort Atkinson, Wis. [*Fork, Shovel, Rake and Hoe Brackets*]: Am well pleased with the results of my advertisement in HARDWARE.

"WE ARE RECEIVING GOOD RESULTS."

Clayton & Lambert Mfg. Co., Ypsilanti, Mich. [*Gasoline Fire Pots and Paint Burners.*] We are receiving good results from the advertisement which is running in your paper, and bel eve the service which you are giving us, is extra good. We trust that our relationship for the coming year will be as pleasant and profitable as have those of the past, and feel very confident that it will.

A MODEL CAN OF VARNISH.

The handsomest and most attractive can of varnish ever put on the market is being sold by the Glidden Varnish Co., of Cleveland, Ohio, who are one of the most enterprising and progressive varnish manufacturers in the country and the first varnish house to offer a high grade of varnish at an advertised low price, to be sold only in sealed cans, protecting the painter so that he may know that he is getting a standard grade of varnish, and just what it is going to cost him.

These varnishes are called M. P. Special Coach Varnish and M. P. Special Spar Varnish. The former is to be used on interior work and the latter on exterior work. The advantage of using both of these varnishes is that they can be left in the gloss finish or rubbed with either water or oil and pumice stone, giving much better results than the old-fashioned hard oil finish, as they produce a very elastic and durable finish and will not bloom. Both of these varnishes are put up in handsome cans with the label lithographed on the tin so that they cannot rust out or peel off, thus giving the dealer a can of varnish that will always look bright and nice, as the label can be washed off with soap and water and not be injured. These cans are also equipped with the new fulcrum cap and nozzle with inner seal, so that when the seal is broken the can has an air-tight cap, thus keeping the varnish in good condition and preventing evaporation.

Dealers should lose no time in putting in a stock of these varnishes, as they will sell on sight and they offer a liberal discount to the dealers, as they want them to act as distributing agents for both these specialties. The retail prices are as follows: M. P. Special Coach Varnish, in five-gallon cans, $1.25 per gal.; in one-gallon cans, $1.40 per gal. M. P. Special Spar Varnish, in one-gallon cans, $3.50 per gal.; in half-gallon cans, $1.90 each; in quart cans, $.95 each; in pint cans, $.50 each.

THE CLIPPER OUR IMPROVED LAWN MOWER.

Light, more **durable and less liable** to get out of order than those now in general use. Nothing escapes the grasp of the Pioneer, weeds, dandelions and plantains being cut as closely and evenly as grass. Only requires the same power to cut grass two feet high as it would to cut two inches, and cuts more closely in the mowing of irregular surfaces and spaces, such as between posts of fences, walks and shrubbery. The Clipper Mower is not analogous to other lawn mowers, as it does not roll down the grass preparatory to cutting it; the finger bars and fingers thereon of the mower, gather in the grass in nearly an upright position, and the vibration or reciprocating motion of the knives shears off the grass with uniformity. **There is no use for sickle or shears where the Clipper is used.** For descriptive Circulars and Prices address the makers.

HARDWARE

VOL. XV. MAY 10, 1897. NO. 3.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: CHICAGO, - - - - - ASHLAND BLOCK.
BOSTON, - - No. 33 EQUITABLE BUILDING.
CINCINNATI, - - - No. 316 VINE STREET.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The increasing prospects for a genuine business revival continue throughout the country, and reports are favorable for a steady improvement in the present trade conditions. The absence of any very extensive orders being given to the manufacturers has had a tendency to keep prices well in hand, no material changes being noted that would affect the tone of the market. Dealers are buying in a safe and conservative manner, and this feature of business will be noticeable throughout the season, as the desire to heap up stock grows less in proportion as the summer dullness looms up in the commercial horizon. The marketing of specialties is growing more encouraging under pushing conditions than has been the case for a year or more, and the demand for improved tools is perceptibly stronger, indicating either present employment for hands previously idle, or else some field of labor in prospective. Builders' Hardware finds an increasing enquiry. Improvements affecting that line are becoming subjects for daily discussion, no doubt engendered by the condition of ease which the money markets of the country find prevalent in all financial centers. That of New York shows an excess above legal reserve of loanable capital beyond the fifty million mark, with loans "on call" at less than 1¼ per cent. among the unprofitable possibilities.

The results of the Grant Memorial Day special rebate on passenger rates by the various railroads converging toward New York city, had the most desirable effect imaginable, many buyers reaching the metropolis that for several years have been satisfied with stocks of goods purchased at points more accessible to their own cities. It is thought possible that similar concessions may be obtained at stated future periods, should the Governor sign the anti-scalping bill now in his hands awaiting approval. The changes that have been made in the tariff bill by the Senate, affecting the Hardware and metal schedules, excite but little, if any, unfavorable comment; they leave the impression that more revenue will result, although many articles are trembling on the verge of a positive prohibition, while representing classes of goods, the making of which is scarcely desired by our own factories. The successful opening of foreign markets made possible by the tariff now in force, with the increasing percentage in our exports of manufactured goods, has had its due effect, and the Solons of the Senate have listened to wise counsels which promise more favorable results in the development of revenue.

Bishop Potter on Economic Disadvantages.

We quote in another column the remarks made by Bishop Potter of our city, a few evenings since, at the annual supper of "The Church Association for the Advancement of the Interest of Labor."

What does Bishop Potter want? Does he desire to see the workingman thrust back into the condition surrounding him only a few decades ago, when the hours he labored were without compulsory limits; the factories he worked in were filthy, and lacking in healthful influences; when the absorbing interest of the employer, so feelingly referred to, was considered as so much additional compensation for poorly paid services, to lower which still further the employer too frequently used the large mass of the unemployed as a club with which to beat his own hands into subjection, thus creating a willingness to accept anything, and be satisfied they were alive?

To-day, as has been freely commented upon in the daily journals, no more exacting trust is in existence than that created by the combined labor interests, under the control of their various trades unions, who demand, with organized strength, a recognition impossible under the old conditions referred to.

To-day the workman has surrounding him in his domestic relations a condition of comfort and indications of an expanding culture, which forty years ago many men who were considered "well to do" were unable to enjoy.

Every addition of machinery to the factories of our workingmen lifts their horny hands above the drudgery, the positive slavery in a system of hand-labor; the machinery increases their skill, develops their inventive ability—in fact, makes men of them instead of beasts of burden, and should no more be deprecated by the minister of a Christian church in this enlightened age than to decry the type-setting machines that make cheap Bibles possible, and create educational impulses. To give utterance to the wild statement that machinery, by increasing his business capacity, exciting his ambition, and making him as it does in many inventive instances, the peer of his employer, was turning the laboring man into a simple idiot, is one of those exaggerated statements which, emanating from the undeveloped information of the pulpit, throws discredit upon formulated doctrines and devotional creeds.

The unskilled workman he saw "sitting on a bench," etc., etc, under old conditions might have been digging ditches, instead of the Italian shoveler that is now relegated to a class of employment from which this other workman, possessing a quicker intelligence and a readier use of his hands, had been promoted.

To argue that because of this workman being com-

Digitized by Google

pelled to sit all day long doing work requiring special handling, while the machinery was performing the hard labor, should so degrade his perceptive faculties that he should drink, gamble and fight in the night time as a relief, betrays a lack of knowledge on the part of the venerable Bishop as to economic influences on the better life of an active man.

He is unwilling to admit the humanizing conditions made possible by organized labor; perfect factory plants and automatic machinery, all of which, associated with short hours and time for mental improvement, have made the American workman the pride of the world, and caused our perfect products to excite the wonder and astonishment of other nationalities possessing men enough, but lacking in these elements of advancement.

Every opportunity is given the workman in this country by conscientious employers constantly improving the condition of their men by labor-saving machinery, clean, warm and well-ventilated factories, that tend to elevate the laborer whether he works in the shop or the office.

The Bishop has been delving among the archives of the past, and is scarcely up to date as far as his own country is concerned. The conditions he comments upon in a manner worthy of John Most and his compatriots, apply more largely to the factories of Great Britain and the Continent than to the wide-awake proclivities of his fellow Americans.

The new inventions he speaks of that save money, are made and are owned by the workmen, whose well rewarded efforts, by developing all the possibilities of productive skill, have created them, and added by their increased product to the crowning glory of this manufacturing nation.

Does the worthy Bishop know that in our export trade alone, the increase in exports for the nine months ending March 31, 1897, was $143,435,547 as compared with an increase during the corresponding period ending in 1896, when it was only $51,587,693? In the large advance thus noted in our export trade, the percentage contributed by our manufacturing interests is represented by about twenty-five per cent. of the gross exports; for the month of March, 1897, this had reached thirty per cent. The hand even of the unskilled workman who "day after day, and week after week, shoved into the opening a small piece of iron, turned the metal two or three times, threw it into a large box and took another piece," undoubtedly did its share in shaking the supremacy of Europe in a field regarded as indisputably her own, and did it without being incited either to "drink, gamble or fight."

In what country more than this does the laboring man "make the capitalist respect his rights?" They don't have to "stand on their feet" as the Bishop suggests and "holle;" they simply appeal to the walking delegate, and the hum of industry in the entire city stops on the instant, when the fiat goes forth with its imperative demand.

If the worthy Bishop—whose desire to benefit the laboring classes is not called into question—has nothing better to give "The Church Association for the Advancement of the Interest of Labor" than language such as given in the extract quoted by us; language that tends to excite an antagonism between the beneficent interests of both employer and laborer, the reverend gentleman in the language of Josh Billings, "must either have a poor auger or else he is boring in the wrong spot."

Greater New York.

The population of the city of New York, according to the police census of 1895, is 1,851,060. The population of Brooklyn, according to estimates based upon the State census of 1892, is 1,142,728. The population of the future Borough of Queens, as estimated in 1896, is 46,502 for Long Island City, 22,500 for Flushing, 24,500 for Jamaica, 25,000 for Newtown, and 8200 for part of the town of Hempstead, or about 127,000 in all. The population of Staten Island was estimated at 65,000 in 1896. The aggregate population of the Greater New York is therefore substantially 3,165,000. The total assessed valuation of property in Greater New York last year was $2,599,967,089, of which $1,975,928,987 was that of the present city. The aggregate cost of administration is about $65,000,000 a year; total debt, $217,000,000.—*New York Times.*

New Departure Prizes.

The prize gold mounted bell, in the New Departure clipping contest for April, was won by W. O. Pearson, Garland, Ohio.

Twenty-six daily prizes were awarded, one for each day, and the interest and enthusiasm continues unabated.

The opportunity to get one of these high grade bells, free, should be improved by everyone, and readers of HARDWARE are advised to enter the contest. Some one gets a bell every day and captures a gold mounted bell each month. Why not you? Address reply to The New Departure Bell Co., F. A. Southwick, advertising manager, Bristol, Conn.

A Business Opportunity.

To an enterprising young man of good capacity, and possessing sufficient capital to ensure success, we know of a fine opening in one of the most flourishing cities in New England, possessing a trading population tributary to it of 75,000 inhabitants. A new block in course of erection, with all modern improvements, will be ready for occupancy on July 1st, one store of which is reserved for a Hardware business exclusively. This might prove the chance of a lifetime. Those interested, address "New England," P.O. Box 618, New York City, N. Y.

R. L. Woodruff and Mr. Perry, of Toledo, representing the Harris Toy Co. of that city, were among the recent visitors to the Hardware Club of New York. They are manufacturers of the Perry Pneumatic Bicycle Saddle, and think that in the 1897 model they have constructed a saddle which comes nearest to the "flowery beds of ease" sung of in the church hymn, of anything this side of the happy spheres.

The Great Western File Works, of Beaver Falls, Pa. operated by the Nicholson File Co., are at the present time extremely busy, and for some time past have been increasing their working force as rapidly as good men acquainted with their business could be secured. This would seem to indicate that these files are substantially growing in popularity with both the trade and consumer.

A good polish for aluminum is obtained by dissolving one ounce of borax in one quart of water and adding a few drops of spirits of sal ammoniac.

Old glass bottles, which are more or less useless, are now ground up and employed as a substitute for sand in the preparation of mortar

HE DISCOURSES ON VARIOUS THINGS

Editor Hardware: You write me that some comment has been caused by my modest communication in your columns of a recent date—especially that the president of the New York Hardware Club seems a little misty as to my personality. This surprises me. If my friend McCartee will remember for a moment the many tons of his goods that I have purchased in years past, he will also remember that our friendship *hinges* on something substantial; that he cannot *bolt* from the track of friendship in that way; nor make a *butt* of me! On, Stanley, on!

I like to visit New York. The manner in which business is there done, reminds me of home—it is so different. Over in the next town I have an old friend who keeps a general store. He carries one garden rake in stock—of an antiquated pattern, and a moldy, war-time price. A customer who needed a rake objected to the price.

"Well," said the old man, crossly, "yon can take it, or leave it, just as you please."

"You don't seem very anxious to sell goods?" said the customer.

"I don't know as I am 'tarnal anxious to sell that rake,' was the answer. "If I do, *I'll only have to order another one.*"

We have a merchant in this town who is just the opposite. He will do anything to make a sale. He is very learned (in his mind) and great in his use of Latin. He was talking to the Widow Smeed about her boy. "How much Henry reminds me of his poor, dear father," said he. "Why, he's the 'Squire's very *face smile.*"

This merchant had a half-dozen of the most prominent ladies of our county seat in his store, and was weighing them on his scales. A short, stout German woman came in, and the merchant said, "Now, Mrs. Schmitt, let's see what *you* weigh."

The scale hung at 210.

"My gracious, Mrs. Schmitt," said the merchant, "who would have thought you would weigh that much!"

"Vell," was the answer, "you see I vas fat *vhere you don't see.*"

But I have drifted away from my theme, which was the difference between New York business methods and those here. We get down to the store at seven in the morning; go home for an hour and a half at noon, for dinner; take an hour for supper at six, and shut up at nine at night. In New York, I learn that you get to the office at ten A.M.; take two hours for lunch, and go home at three, at a salary of five thousand a year! No wonder that New Yorkers have so much time for deviltry.

I called on a prominent Hardware merchant some months ago. He seemed to be very glad to see me, and after a time the conversation drifted around to bores. "They don't stay long with *me,*" said the merchant.

"How do you get rid of them?" I asked.

"I just touch a bell button with my foot," said he, "and there is a sudden call for me, and I slip out, and stay out."

Just then a red-headed boy thrust in his head and said, "Mr. Blank, they want to see you in the back office, right off."

I left.

Some of my friends have been poking fun at me, because I referred to a widow, in my previous communication. I can stand it. Widows are nice, everywhere. Those up here are of a special brand. They are as playful as kittens, and as lively as cats. No grass grows under their feet.

There was a young fellow in our town, who was in love with a girl. He could have secured her, had he stepped up like a man, and asked her. But he was bashful, and put it off. The other chap—who was a sort of energetic, Harry C. Marshall sort of fellow—came in ahead, popped the question, and married her. After a couple of years of bliss, he died, and went to that place which begins with an "H."

Our young man was determined not to get left this time. When the widow drove home from the cemetery on the day of the funeral, he was on the porch. As she came up he said: "Henrietta, I waited too long the last time, and lost you. Will you be my wife?"

"Oh, George," said she, "I'm so sorry. You're too late again. *The undertaker asked me at the grave!*"

I have learned some things in the course of a long business life, and still have a great many others to learn.

But the chief thing I have learned, can be condensed into one nugget of wisdom, in three words: Talk it over.

If thy business enemy offend thee, don't smite him on the cheek. Take him by the button hole, in a friendly manner, and talk it over.

Someone tells you that Smith, down the street, has said or done something to your detriment. Perhaps he has, and perhaps he has not. If he has, your best policy is to prevent his repeating his remark or deed in the future. If he has not, you don't want to do him an injustice even in your own mind.

Put on your hat, leave your temper at home, go down and make a friendly call. Be neighborly, frank, open. Tell him the truth, and ask him for equal frankness. Nine hundred and ninety-nine times out of a thousand the whole matter will be explained and straightened out in five minutes, and you will part as personal friends rather than as personal and business enemies. You will both feel better, you will live side by side in harmony; the earth will be brighter, the sunshine clearer, your own heart lighter, and mankind take on a more friendly aspect. Don't get mad and rush to your desk and send a scorching letter—be a man, and a Christian, and go yourself.

Talk it over!

Never write a letter that leaves a sting.

There is a great temptation to say smart things in a letter. They sound so nice to you, when your type-writist leaves the completed letter on your desk.

But how do they sound to the other fellow? All the smartness has oozed out, before the missive has reached him. Only the ugly brutality remains.

Read the letter over; chuckle over it; admire it and yourself; read it to your clerk, to the office boy, to the cat, if you must show it to someone.

Then tear it up, and write another.

State your case as fully as you wish, and as strongly as it will stand. You can do all that, and still be polite and friendly. Make no threats. Use no taunts. Keep out bravado and bluster. Don't be an ass.

These suggestions have a special significance, in connection with dunning letters.

I know a chap who composed a model letter of this kind. He got more money in the next mail than a dozen collection agencies could have secured.

His letter ran something like this: "In times of trouble,

Digitized by Google

one turns, naturally, to his best friends first. We send you the enclosed statement, in the same spirit as the New Jerseyman showed toward Bill Nye. When Nye asked him indignantly, 'Why do you charge me one dollar for a sandwich?' the Jerseyman answered, candidly, 'Well, the fact is, *I need the money!*' That is our only excuse for troubling you."

One correspondent sent a check and said: "I take off my hat to you. I send you remittance, not because we have the money to spare, nor that your claims are greater than those of our other creditors, but because you are the best dunner I have ever seen. I have been at it twenty years, but I take off my hat to you."

I see they are advertising for locks and dams on the Monongahela River. Here is a chance for my old-time friend, Towne, of the Yale contingent. He can bid on the locks, while any Hardwareman who has been in business during the past three years, can heartily furnish all the damns needed for a dozen rivers.

You are now Greater New York. This takes in Brooklyn and Alderman Walkley. I have bought many goods of him, or rather of the concern he represents—even as far back as the Peck, Smith Mfg. Co. That was when Brother Walkley was on the road, fresh from the scholastic shades of his college. He is about as fair a combination of the American business man and man of letters, as one can find in a day's travel. He likes business, and likes to do business; but he yet longs for the study, and his fingers are always dabbled with printers' ink. He travels the muse's pace with ease, and a rhyme comes as easily to him as a trade discount. He is too blunt to make a good politician, but all that bluntness is gone when it comes to poetry.

Mr. Walkley writes in a serious vein. Some other poet of the Hardware line—perhaps George Hart, Brother "Jack" McCarty, or Thomas James Fernley—has given the world a little gem called "The Carpenter's Wooing," a copy of which has been sent me. Let me repeat it:

O I a door you, darling one,
I hall ways loved your laughter,
And wiudow you intend to grant
The hand my hopes are rafter?

You're roof if you imagine that
I've not enough to board you;
We'll have a good square meal, for I
Can hammer steak afford you.

I sawyer father yesterday;
'Tis plane he'd have us marry.
O let us to the joiner's hie
Nor let us shingle tarry.

The cornice waving now, my love;
The gables are all ringing;
A lath! Why longer let me pine?
I'm sawdust when 'I'm singing.

A. N. Oldman.

An Antique Specimen.

To the Editor of Hardware: While traveling in Missouri, last fall, I passed through, in the south-western part of it, a small settlement called Doylesville, in which, seeing a little store with evidences of Hardware decorating its window, the panes of which looked as though they hadn't been washed since "befo' de wah," I dropped in upon the occupant, who looked, as he aroused himself from a doze he was indulging in, very much like Rip Van Winkle, shaking the twenty years' collection of the dust of ages from his dilapidated garments.

He did not arise, but permitted me to get to his chair, or rather, stool, and state my requirements. On my way there, I took in the limited contents of the little establishment, and it struck me as being the oddest collection of general store goods I had ever seen displayed, from the fact that each and every article I saw looked as though it had been there for years and years, and in all that time had not received any attention from a dusting brush or other appliance to freshen up its appearance.

As I was only interested in the stock I was most familiar with, Hardware, I thought I would develop a possible want, and said: "I'd like to get some nails!" "What size?" "Tenpenny!" knowing, if he had any at all, that size would be a leader. "How many?" I said: "a pound would be enough," and using his hand for a nail claw, he dug out from a keg under his little counter—in which I could see a few brass headed nails, made a yard measure, with variations on the inside edge—he dropped slowly into a rickety "Hatch" scale, almost as much cobwebs and similar dirt as he did nails, as far as quantity was concerned, and of all the rusty looking nails I had ever looked at, his were the worst: had it been a keg rescued from a salt water bath they couldn't have looked in a deeper and more disconsolate condition of rust. I asked the price upon receiving them, and when I was told "twenty cents a pound," my curiosity was piqued to know what infernal nail trust stimulated this unheard-of tariff for tenpenny nails. "Ain't that pretty steep?" I queried colloquially. "Wall, no," he said. "Never sold them for any less!" "How long have you run this store?" "Since 1863, but trade has been durn light since about a couple of years after I started; why, would you believe it, that's the last keg of tenpenny nails I bought way back in 1864; they cost $9 00 a keg then, and I don't get my money back at 20 cents a pound. I laid in a pretty heavy stock of goods for this place that year, and they seem to have lasted ever since; when I tell people what they're worth, they walk right out of the store, and say everything is ten times too high; that I ought to go up to St. Louis and get posted; but what's the good of my spending my money for that, I can't afford to sell my goods less than cost."

I told him I should imagine his prices were greatly at variance with goods that could be bought now, but he "wasn't going to sell less than cost. Why, I paid two dollars apiece for them hand saws, and a dollar apiece for monkey wrenches," which were 10 inches long. "They tell me they can buy them boxwood rules for ten cents anywhere, but mine cost twenty-nine cents, and they wuz the cheapest they had." I asked the price of some 4x4 cast butts I saw on his shelves; he said they had "cost him forty cents a pair." I really felt sorry for the old man, nobody came to his store; everybody there went to a neighboring town some 12 miles away, for any accumulation of wants which had developed among the forty or fifty inhabitants, who knew his peculiarities and didn't come near him unless the case was an extremely urgent one.

His own people had all died off, leaving him alone; he kept a few chickens, and just about made out to exist, occasionally making a barter for something he needed. He was at his post of duty every day, and with an old broom that had seen much service, he broomed out a limited space near the door, probably from force of a habit formed 30 years ago.

The old fellow only realizes that he cannot sell goods less than cost and live on any profits, so he is waiting for advanced fluctuations that will put him in the swim once more. A good many things in his stock if he tried to sell them would be found valueless, but he "has them on hand." He will probably join the great majority some day, leaving no successor, for he said he did not know "no chick nor child" of which to make an heir to his possessions.

K. C. B.

Pullman Sash Balance Co., Rochester, N. Y. Eleventh annual catalogue for 1897 and 1898: a pamphlet of 64 pages, in which the improved product created by an experience of many years in their especial business receives consideration.

The Desk: Use and Abuse.*

BY NATH'L C. FOWLER, JR., DOCTOR OF PUBLICITY.

The desk of business has always accompanied business.

If a desk were not a necessity it is obvious that there would not be a desk.

A business man's books can be kept on a barrel-head.

Business can be transacted over the rail of a fence.

But so long as bookkeepers and business men positively refuse to do business without a desk, it is fair to consider the business desk a business necessity.

It is obvious that the desk, while being a necessity, is in reality an instrument of convenience.

It is used because business can be better transacted with its use.

Practically all accounts and all negotiations of every class are done in company with one or more desks, or the equivalents of desks.

The traveling salesman finds the buyer at his desk.

The client finds his lawyer at his desk.

The editorial caller finds the editor at his desk.

Desks are everywhere, used by everybody, and yet not one man in ten thousand appreciates what may be considered the business sacredness of the desk.

Order is the first law of heaven.

It also is the first law of successful business.

A convenience is hardly worthy of the name unless it be an orderly convenience.

Convenience without order is not convenience.

The character of a man is not always known by the clothes he wears, nor by the desk he uses, but as the man is dressed so may he be, or at least, so may he be considered.

The appearance of business is often reckoned by the appearance of the desk.

The old idea of considering a man's character by the company he keeps has been carried down to business, and a man must be known to some extent at least by his business surroundings.

A well-kept man in front of a well-kept desk is some evidence of a well-kept business, and a poorly kept man in front of a poorly kept desk, is some evidence of a badly kept business. True, millions have been made amid surroundings of disorder, but the grand old law of averages is safer to follow than the rule of exceptions, and so long as a well-in-order desks seems to be a part and parcel of a well-in-order business it will seem necessary that attention to desk management be considered somewhat on a par with attention to business management.

A poorly kept desk means a waste of time.

Figure it out, if you will.

If the desk is out of order it probably takes you a half an hour a day to find the things you would find if your desk were in order, and half an hour a day is three hours a week, and 156 hours a year, or the equivalent of somewhat more than a half of a month of actual business time.

The man with a well kept desk can enjoy an extra two weeks' vacation without using up any more business time than the man of the desk out of order.

Bissell Sweepers and Department Stores.

John Wanamaker has just erected in his New York store a very nice and attractive piece of cabinet work set apart exclusively for the exhibition and demonstration of the Bissell line of carpet sweepers.

Hahne & Co., Newark, N. J., in their newly equipped housefurnishing department, have just completed a very attractive space covering 10 feet by 10 feet, handsomely carpeted, with polished oak cabinet work and fittings and brass mountings, where they display not less than six to seven dozens of the Bissell Carpet Sweeper Co.'s sweepers.

The above eligible spaces devoted to this class of goods clearly demonstrate the importance that the department stores of this country are attaching to this famous line of sweepers. The growth of the Bissell carpet sweepers, dating some fifteen years back from very small beginnings from what in those days was considered an article of luxury, through many phenomenal stages in its growth, has reached a point of household interest. No household at the present time seems to be complete without a Bissell carpet sweeper. The many improvements that have been made from time to time in the mechanical department of the Bissell Carpet Sweeper Co. have doubtless been highly appreciated, and none more so than their latest improvement, the "cyco" bearing feature, which the company are widely advertising and which, in connection with the dust proof axle tubes, make a very important combination of valuable mechanical features that are now used on the Bissell high grade sweepers.

Chas. Morrill's Specialties.

Among the number of specialties which have for the past twenty years been associated with the name of Chas. Morrill, No. 35 Warren Street, New York, the crowning one of all has been his "Perfect Saw Set," the fame of

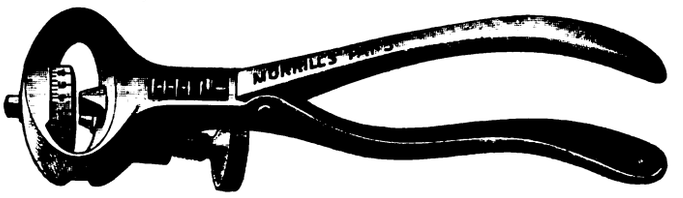

FIG. 1.

which has become world wide, and the marvelous success attending its intelligent distribution forms the truest evidence of its intrinsic merit.

From the very inception of the business, the demand for these saw sets has shown a remarkable strength, and to-day they command a market in all parts of the civilized world.

In appreciation of this very liberal patronage from mechanics of all classes and every nationality, as well as the Hardware dealers in general, the aim of the Morrill factory has been to maintain such a high standard of excellence as would merit the preference they have so universally received. We present herewith in Fig. 1, an illustration of the Morrill Saw Set No. 95, which is regarded as the master piece of his line of products. This scientific saw set leaves scarcely anything to be desired. The revolving anvil with indicator is sub-divided and marked with figures, showing the number of teeth in the saw to be

FIG. 2.

set. For example: If the saw has four teeth to the inch, turn the anvil until the figure 4 comes up directly in front of the plunger, when the operation can be proceeded with.

In operation, the set screw should be so adjusted that the saw may pass through without friction. When necessary to do extremely fine work the set screw is given a few turns until in the judgment of the user it will effect the desired object. The trade mark shown herewith in Fig. 2, is stamped upon all genuine Morrill's saw sets or other specialties manufactured by Chas. Morrill.

New York was the first city in the United States to adopt public street lighting. In 1698 an ordinance was passed by that city whereby every seventh house was required to hang out of the second-story window a lantern on a pole, for the benefit of pedestrians.—*Exchange.*

Campbell's Practical Sliding Display Trays.

The Campbell Cutlery Co., No. 426 South Clinton Street, Syracuse, N. Y., are engaged in manufacturing in connection with their extensive line of show cases, to which we made reference in our previous issue, a very valuable improvement to this line of goods. They are made under the name of "Campbell's Practical Sliding Display Trays,"

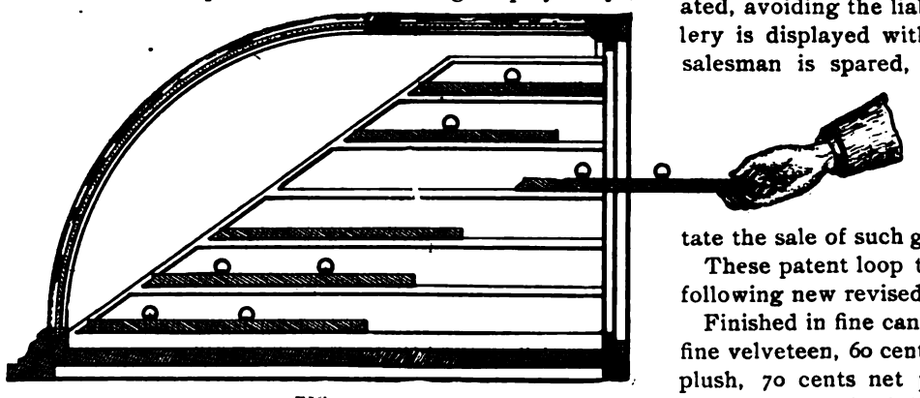

FIG. 1.

which, being intended to fit any show case, saves a large portion of valuable space, and enables the storekeeper to make the most brilliant display of his stock of attractive goods, keeping them in good order, while the stock is always in fine position. It is evident that by the aid of these display trays more articles can be displayed than by any other method, as they utilize the whole inside of the show case from bottom to top, where usually only the bottom is utilized and most of the space is consequently wasted.

A proper display of goods under such positive advantages certainly extends the sale of the same; even shopworn goods are displayed more advantageously under such improved conditions. We illustrate in this article the methods by which this is obtained. Fig. 1, giving a sectional view of a show case, indicates this quite clearly; as each tray is drawn out independently of the others, the whole case can be quickly emptied without touching an article, when necessary to clean the inside of the show case, or in changing the various samples. In Fig. 2, a more general view of the show case filled with display

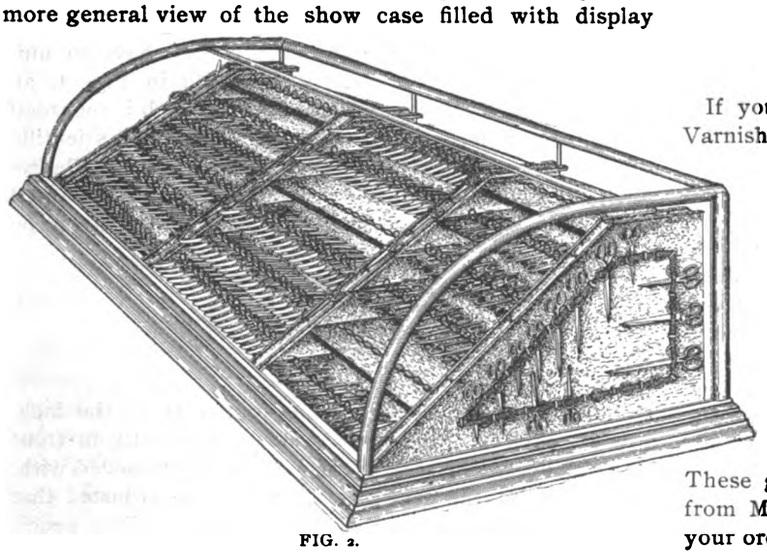

FIG. 2.

trays carrying stock can be obtained, and which conveys a better idea of their many possibilities.

As the tension of the loops are adjustable to the size of each article displayed, their wear and breakage is obviated. The tension is adjustable the whole length of each tray by the novel construction of the loops. The loops on each tray are spaced off differently for each size of knives, razors, scissors, shears, etc. Each loop is provided with a lifting handle. Back of each loop is a white erasive tablet for marking number, cost, price, etc. On the bottom of each tray can be written or pasted any information for ready reference, or price lists, circulars, etc. By removing the bottom tray to rear of any upper tray, original stock boxes may remain on bottom of show case as usual. Thus all the trays are a clear gain of space to the top of show case.

The necessity for handling unpurchased goods is obviated, avoiding the liability of rusting, even where the cutlery is displayed with blades open, and the time of the salesman is spared, for a selection can be made almost without the removal of anything except the articles selected. The tops and sides of the standards can be dressed with scissors, shears, etc., which cannot but greatly facilitate the sale of such goods.

These patent loop trays are offered to the trade at the following new revised price list:

Finished in fine canton, 50 cents net per foot; finished in fine velveteen, 60 cents net per foot; finished in fine silk plush, 70 cents net per foot. Five trays high count five times the length of the show case. Six, seven, eight, nine or ten trays high count six, seven, eight, nine or ten times the length of the case. A show case only ten inches high, takes five trays high.

Correspondence is solicited by the manufacturers; estimates will be furnished, and a special discount for cash given from above prices.

A Question of Worms.

R. A. Penick & Son, wholesale Hardware, South Boston, Va., make enquiry as below. Anyone in possession of the desired information, will please shed the light of his knowledge on the world, either direct, or through these columns:

To Editor Hardware: We have considerable trouble with worms cutting handles of spades, axes, also snaths and fingers of grain cradles. We have been using turpentine, but find that this does no good. Please advise through *Hardware* what will remedy this trouble, and you will greatly oblige us.

Trade rather quiet. Dealers buying mostly small lots for immediate shipment. Yours truly,

R. A. PENICK & SON.

The Varnish Season.

If you have not already placed your spring order for Varnishes, it would be well for you to put in a line of the Glidden goods. The Glidden Varnish Co., of Cleveland, Ohio, are putting up one of the handsomest and best packages of varnish ever offered to the dealer or painter, which they call their M. P. Special Coach Varnish. The name Special implies that it can be either left in the gloss finish or rubbed in the same manner as a hard oil finish. This varnish is put up in lithographed cans equipped with the full screw cap with inner seal, thus giving the painter a can of varnish that has an air-tight cap or cover for the can after same is opened. These goods are being handled by the principal dealers from Maine to California, so lose no time in sending in your order.

President Agassiz, at the annual meeting of the Calumet & Hecla Copper Co., reported that the Red Jacket Shaft had reached the depth of 4900 feet, and that it would be sunk no lower. The temperature increased after 4580 feet was reached about 1 degree of Fahrenheit for every 120 feet. The rock temperature at 4900 feet was 87.6 degrees.

During the last twenty years the railways of the world are said to have absorbed 50,000,000 tons of steel, or almost half the total product.

RECENT TRADE PUBLICATIONS.

Ashtabula Tool Co., Ashtabula, Ohio, have recently issued their very handsomely gotten up catalogue for the season of 1897, forming a pamphlet of 28 pages, printed in green and brown, with excellent paper and illustrations and with an attractive cover. Their entire line is graphically illustrated and described, with complete price list of every style, and code word for every item shown in the catalogue. The production embraces the following important lines of goods, under the head of agricultural tools: Hay, straw and manure forks; barley and spading forks; corn, vegetable and shaving forks, and coke, coal and tanners' forks. Included in the assortment of goods made, are garden and mortar hoes; plain and braced steel rakes; malleable iron rakes, weeding hoes, potato and manure hooks; fork, rake and hoe handles, lawn rakes, etc. The catalogue is laid out in a proper and convenient way, to enable a dealer to order intelligently, as every article mentioned has a catalogue number, and no description beyond the number of the article is necessary to ensure correct shipment. Even every change in the length of handle for any article makes a new number necessary, and this number when given covers the whole description. The importance of this to an ordering man is readily appreciated, and his wish and prayer would be that all catalogues were similarly constructed. At the end of each line of description is given the code word which answers for that number, facilitating "rush" orders by telegraph, when they become necessary. It would be a good plan in the next issue to include code words covering "quantities" and "shipping directions" usually included in catalogues using a code system. Dealers in these goods should write for this catalogue.

We are in receipt of a very complete catalogue from the Knapp & Pratt Mfg., Geneva, Ohio, the ornamental cover of which gives it an extremely up-to-date appearance. The contents cover a large line of housekeeping Hardware and specialties connected with floriculture, which would be advantageous additions to any general stock of Hardware in the country. This company has long been identified with the manufacture of basting spoons, in a half dozen different styles; flesh forks, mincing knives in great variety; cake turners, of all the known and desirable shapes; carpet stretchers, ice picks, hatchets and chisels, with both wood and iron handles; tack claws, and tack and nail hammers; cast hatchets, cross cut saw handles, box scrapers and carpenters' chalk. Their line of floral tools has been largely added to from season to season, so that now it embraces ladies' and children's sets in very great variety; garden trowels, weeding hooks and strawberry forks; lawn and garden rakes, scuffle hoes, riveted hoes and hoe and rake combined. They are the manufacturers of a number of specialties that have already achieved considerable popularity, and are in steady request; such as "Sure Grip" and "Holden's" patent carpet stretchers, Excelsior kitchen sets, and "Challenge" garden rakes. Their goods are tastefully gotten up, and are quite popular among their customers. This catalogue should reach every dealer handling these goods.

F. E. Kohler & Co., Canton, Ohio, who are among the largest manufacturers of Hardware specialties in the United States, have recently issued their catalogue for 1897, covering an extensive line of goods. Among the specialties enumerated which intelligent advertising keeps constantly before the trade may be noted the following: "The Little Giant" post hole digger, which is a combination of post hole digger, transplanter, spade, pick and tamping bar; also the "Hercules," "Invincible," "Pioneer," "Lock-lever," "Universal" and "Champion" post hole diggers, all possessing similar qualifications for the purpose, but constructed for use in different kinds of soil. They catalogue a large assortment of lawn rakes, with wire teeth possessing unique features, among which are the "Lawn Queen," "Catch-all," "Jumbo," "Paragon" and "Improved Lawn Queen." Other specialties noted are garden rakes, weeding hoes and hooks; snow, furnace and utility steel shovels; sidewalk scrapers, garden trowels, corn planters, saw sets, pruning shears, can openers, mop handles, force pump and sprayer, lawn sprinklers and hose menders, grass hooks and anti-rattlers, the enumeration of which will convey a fair idea of their diversified product. They are also manufacturers of a line of curry combs which includes several original in design that have become exceedingly popular wherever introduced.

E. C. Stearns & Co., Syracuse, N. Y., are issuing a complete edition in German of their "1897 year book," to the excellence of which novel catalogue we gave testimony some time ago. It is stated to be the first instance where an American manufacturer of bicycles has brought out a complete catalogue in a foreign language, and which was made necessary in this case by the heavy trade already established by E. C. Stearns & Co. in Germany and Holland. For export trade, Stearns' models are equipped with mud guards, gear cases, brakes, and several other accessories, without which the Continental riders might not regard them with the distinguished consideration now so noticeable.

The Monarch Cycle Mfg. Co., Chicago, Ill., and No. 83 Reade Street, New York, have recently issued an extremely handsome and artistic hanging poster in imitation of a water color painting, showing a lovely young lady mounted upon a "Monarch," and pedalling along the sea shore in a very graceful pose. The drawing is excellent and the coloring is in a style in harmony with the highly artistic catalogue so recently published by the company for distribution at their various agencies. This high art souvenir will hang beside our desk, a fate it well deserves.

E. T. Barnum, Detroit, Mich., manufacturer of iron and iron work of all kinds, announces that his new spring catalogues are now being mailed to the trade. If any dealer does not receive a copy, he should write for one and it will be mailed to him at once free of charge. This 1897 spring catalogue contains a great number of new and original designs of all kinds of useful and ornamental wire and iron work, and will be found a very handy reference book.

The Berger Mfg. Co., Canton, Ohio, are distributing a "Yellow Kid" reminder to the trade touching upon their line of Standard Tubular Lanterns, of which it illustrates five salable styles. This "reminder" consists of a large yellow card 8x10½ inches in size, with space in one corner for the address; on the reverse side, a Yellow Kid discourses on the fact that "Berger's Lanterns is hot stuff," etc.

It does not matter whether the rot be dry or wet, it will kill business as well as a tree.—*Hardware and Metal Reporter.*

NEW GOODS AND SPECIALTIES.

The Bommer Spring Hinge.

The attention of the advanced architects of late years has been more and more given to the importance of having the entrances to public buildings and large office structures possess an artistic effect in which all the parts will be

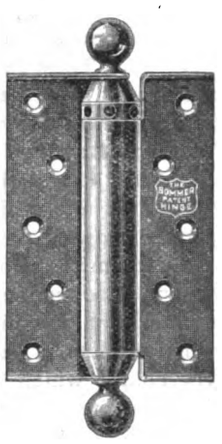

FIG. 1.

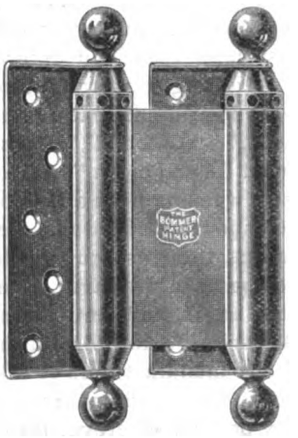

FIG. 2.

in evidence. This is made essentially necessary from the fact that as the strongest light usually falls upon this part of the building, everything in any way artistically harmonious adds greatly to its imposing effect. The necessity in our variable climate for having the large halls and lobbies of hotels and large buildings protected from the cyclonic disturbances so frequently occurring at short notice, has made strong and reliable spring hinges very desirable appliances in the proper construction of these large doors. When possible to be selected without marring those architectural lines which naturally form the original features of an entrance, a suitable hinge for the purpose is anxiously sought for by the supervising architect, and it is conceded that the Bommer Spring Hinge, of which we give a number of illustrations herewith, has the quality of blending harmoniously with any style of decorative art, and does not by any excess of bulk obtrude beyond the proper lines. These modern results of inventive excellence are made from wrought metal, with a lessened diameter of tube than has been formerly deemed essential; notwithstanding which, the friction on the joints has been reduced to a minimum, while the requisite strength and power has in no way been sacrificed. While retaining to the fullest extent the advantages which the use of the softer metals gives the manufacturer for excellence of finish, all the wear has been thrown in its construction upon a steel skel-

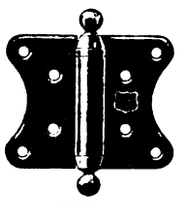

FIG. 3.

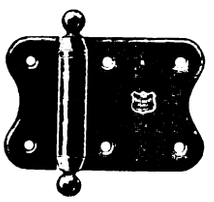

FIG. 4.

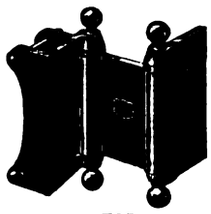
eton, which, in the interior of the frictional points, bears the entire strain, and can be made of increased strength to any degree required by the character of the work. In Fig. 5 and Fig. 7 are shown illustrations of the "Bommer Surface and Box Flanged Hinges," which are intended for use on the marble partitions of water closets; they possess principles in common with all Bommer hinges, but have a special construction for the purposes designed, of which the illustrations furnish a clear idea. They are made to suit any thickness of marble. Fig. 6 shows a strike designed to be used in connection with the single action of surface and box flanged hinges, the rubber cushion is dovetailed from the back, no rivets or screws being used to

FIG. 5.

FIG. 6.



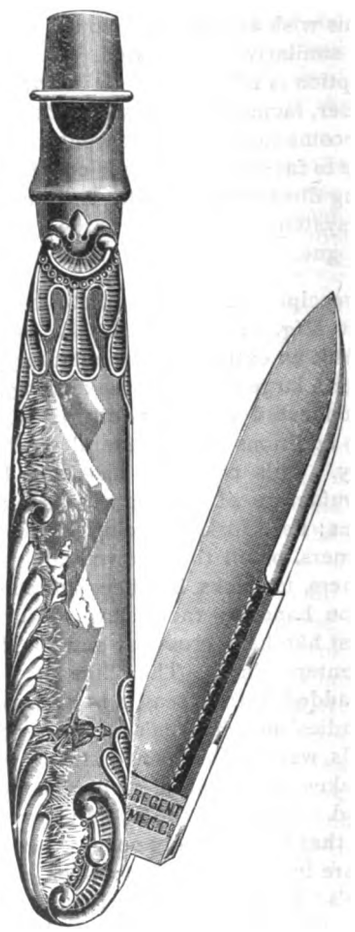


FIG. 7.

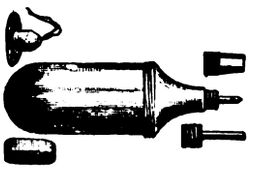
limit its elasticity. These goods are well worthy of the attention of the trade, and catalogues with trade discounts, will be forwarded upon request by the manufacturers, Bommer Bros., Nos. 351 and 353 Jay Street, Brooklyn, N. Y.

Sportsman's Knife and Whistle.

The Regent Mfg. Co., Bridgeport, Conn., in addition to their other novelties which they are manufacturing in the cutlery line, are placing upon the market a new whistle knife, designed for the use of sportsmen and others, and



which will undoubtedly meet with a ready sale. The metal handle is embossed with characteristic hunting scenes, and the single large-sized blade is made from the best quality of English steel; both whistle and handle have an oxidized copper finish. It will make a desirable knife for hunting and fishing. The manufacturers state, to introduce it, they will mail samples to the trade, post-paid, on receipt of 25 cents.

The League Kit.

The New York Belting & Packing Co. Ltd., No. 25 Park Place, New York, are placing before the Hardware trade and dealers in bicycle sundries, a new device for repairing single tube tires called the "League Kit," or "The Puncture Doctor." It is a self-contained combination tool for repairing tires, as shown in illustration herewith, operating

in conjunction with a solution which enables it to make a quick and sure repair of a small puncture, with the aid of tne solution only, and a large puncture by the additional use of a plug. This is done in a very simple and easy manner, and we should think the tool would meet with a very great degree of favor. The fact that both plug and cement repairs can be effected by this tool should certainly recommend it to all riders of single tube tires.

Myers' Siphon Pump.

F. E. Myers & Bro., Ashland, Ohio, who are well known to the readers of Hardware as leading manufacturers of force and lift pumps possessing the most original features possible in the construction of these useful appliances, are engaged at the present time in placing upon the market one of their latest inventions, which is a new pump, constructed upon the siphon principle, and the original construction of which is demonstrated in the accompanying illustration, Fig. 1 giving its general appearance, and Fig. 2 showing a sectional view, embodying its mechanical invention. The Myers Siphon Pump is so made that all of the working parts can be removed without in any way disturbing the suction or discharge pipes, or disarranging the pump or its several connections. It is provided with a drawn brass cylinder, has brass valve cap, glass valve seat, brass plunger and piston rod, and large brass packing box;

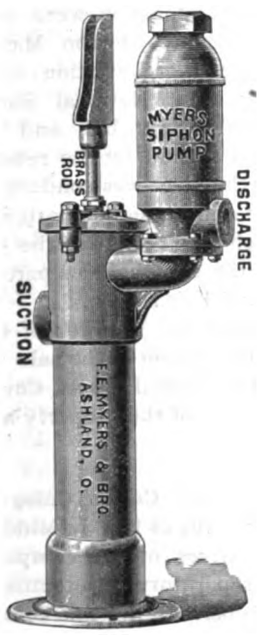

FIG. 1.

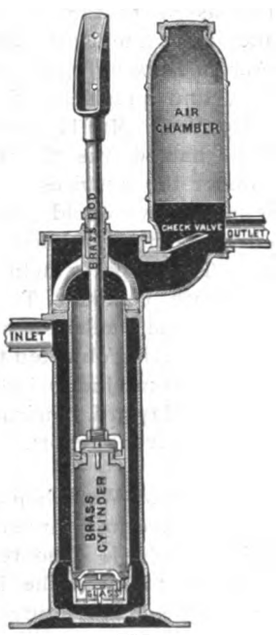

FIG. 2.

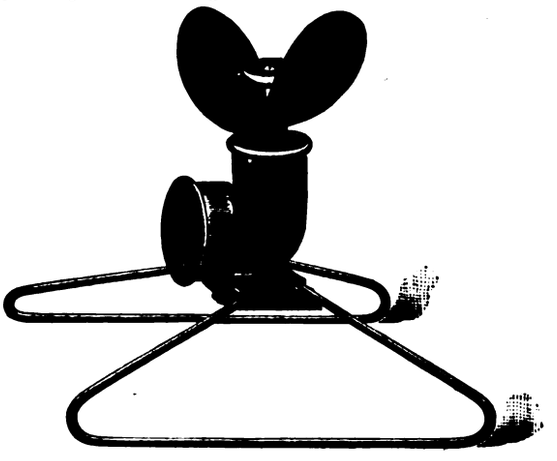
the air chamber is of large capacity, with a check valve in the discharge opening; the outlet can be set at different angles to suit the location of the pump. It is stated as the policy of this firm to build goods possessing originality of design and up-to-date ideas in connection with constructive excellence; with the Siphon Pump they feel that they cover every requirement possible to be demanded in a pump of this class. It is made in three sizes, 2½, 3 and 3½ inch cylinders, each with a 12 inch stroke.

The "Mail and Express" Scale.

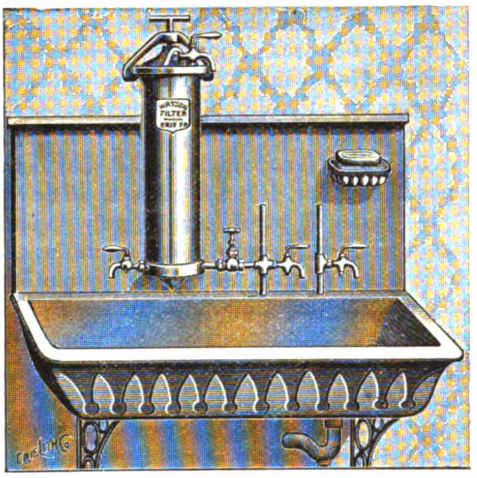


The Pelouze Scale & Mfg. Co., Nos. 133 to 139 S. Clinton Street, Chicago, Ill., celebrate their succession to the business of the Gilfillan Scale & Hardware Co., by the placing upon the market of a new and extremely useful scale, which will be a boon to any publishing house or express office for the weighing of portable packages. It is called the "Mail and Express," and we illustrate the same here-

with. Among its features of novelty and convenience may be mentioned the following: It indicates the exact cost of postage in cents on letters, books, merchandise and newspapers up to four pounds. It weighs express packages by half ounces up to sixteen pounds. The dial contains the complete postal laws for different classes. The "Mail and Express" is made of steel, handsomely japanned and striped, has a glass sash with nickel trimmings, covering a 7½ inch dial; is furnished with a tile top plate, which is made with a special glaze and is 6 inches square in size. The retail price of this novel scale is $5.00 each.

The Champion Ball Bearing Lawn Sprinkler.

The Champion Safety Lock Co., Cleveland, Ohio, are placing upon the market as a seasonable specialty, the Champion Ball-Bearing Lawn Sprinkler, which is referred to as possessing novel and distinctive features that recommend it as being of superior merit. We present an illustration of this sprinkler herewith, showing it with the ingeniously constructed stand furnished with all of them, making it very complete. The great drawback in the use of many



revolving lawn sprinklers has been that after a short time the bearings becoming irregularly worn, cause a binding in the working parts which interferes with their utility. In the Challenge Lawn Sprinkler this has become entirely overcome by the use of a ball bearing, which runs with a minimum amount of pressure making it possible to operate the sprinkler with a lower degree of pressure than is usually considered indispensable. The balls in the bearing being

Digitized by Google

made of ball metal, are thus rendered incapable of rust. The entire sprinkler, except the stand, is made of brass highly finished and fully nickel-plated. The stand is made of steel wire, tinned, lessening any risk of breaking, and is constructed so as to be very easily attached to the sprinkler. Circulars more fully describing this latest improved sprinkler, will be forwarded by the manufacturers upon request.

Watson's Germ-Proof Natural Stone Filter.

N. A. Watson, corner Sixteenth and State Streets, Erie, Pa., is the manufacturer of the "Watson Germ-Proof Natural Stone Filter," which he is introducing through the Hardware trade. It would seem as though never before in the history of the world has so much attention been given to the importance of a pure water supply, free from filth of every description, microbes, bacteria, germ matter, gases, taste or smell, and the awakening of so much public interest in a matter so conducive to health and sanitary conditions generally, has resulted in more improved methods of providing filtering processes, and inventive ingenuity is well employed in this specific quest, for impure water, as is too well known, is the most prolific source of such diseases as typhoid fever, diphtheria, malaria, diarrhœa, and in fact all diseases of a contagious character. By the use of the Watson Germ-Proof Filter it is claimed that the

foulest water can be made clear and sparkling, wholesome and pure, and all the impurities thus extracted are not absorbed in any way by the stone, which forms the filtering process of this improved filter, but are retained upon its surface and can be readily removed by a brush, leaving the material perfectly clean; as in the construction of the filter it is not necessary to use either alum, sand or charcoal, the peculiar nature of the stone being of a porous character, unsurpassed for freeing the water from all such impurities as decomposed animal and vegetable matter, or other organic disturbance usually creating the countless germs that spread disease. These filters are made of iron, galvanized inside and nickeled outside, and are furnished in the following sizes, calculated for a capacity at 40 pounds pressure: No. 6, about 112 gallons per day, $10 each; No. 7, about 200 gallons per day, $16; No. 8, about 400 gallons per day, $30 each. Trade discounts and further information will be forwarded upon request to the manufacturers.

A few years ago 4,500,000 bronze two-cent pieces were set afloat. Three million of these are still outstanding. Three million three-cent nickel pieces are scattered over the United States, but it is very rarely that one is seen.

The regular banquet of the New Haven Merchants' Association was held at the Tremont House, New Haven, several evenings since. This is probably the last gathering of this character of the season.

Have Commenced Suits.

The National Cash Register Co., Dayton, Ohio, filed suits in the United States Circuit Courts, on April 16th, against dealers in, and certain users of, Imperial Cash Registers, which are manufactured by the Osborn Cash Register Co, of Detroit, Mich. The National Company claim that the Imperial Cash Register infringes certain of their patents, and sue in each case for infringement, and ask for injunction and damages. The list of dealers and users against whom suits have already been brought is as follows:

DEALERS.

McCormick, Behnke & Co., St. Paul, Minn.; Kennedy, Hungerford & Kools, Kalamazoo, Mich.; The Weideman Co., Cleveland, Ohio; Berdan & Co., Toledo, Ohio; James J. Bauman, Denver, Colo.; Williams, Wood & Co., Denver, Colo.; H. Sheftels & Son, Milwaukee, Wis.

USERS.

Frederick Bahr & Sons, Milwaukee, Wis.; Fraatz & Clark, Dubuque, Iowa; E. Lacher, Geneseo, Ill.; Edward T. Van Ostrand, druggist, Allegan, Mich.; Henry Spira, wholesale and retail liquor dealer, Cleveland, Ohio; Emil Kroemer, grocer, St. Paul, Minn.; Hemmert Brothers, saloonists, Celine, Ohio; John A. Rosinbush, druggist, Union City, Ind.; John P. Murphy, grocer, Joliet, Ill.; Charles E. Ward, general store, Bement, Ill.; John Fritz, No. 44 Main Street, Ann Arbor, Mich.; Anderson & Busche, general store, Wells, Minn.; John M. Price, Toledo, Ohio; Nicholas Wagner, Toledo, Ohio; Homer J. Nodine, Syracuse, N. Y.; John Brown, provision dealer, Brooklyn, N. Y.; Otto Alexander, druggist, Brooklyn, N. Y.; Edward Egge, butcher, Brooklyn, N. Y.; Bernard Robinson, druggist, Omaha, Neb.; Swan E. Nelson, stationer, Chicago, Ill.; Iestyn W. Charles, grocer, Denver, Colo.; Newton & Hickok, Syracuse, N. Y.; Eugene A. Welch and Ernest B. Russell, Kalamazoo, Mich.

Sale of the Atlas Tack Assets.

The assets of the Atlas Tack Corporation were sold at auction at the Real Estate Exchange, Boston, Mass., to Aaron Hobart, chairman of the reorganization committee, and president of the Tremont National Bank, for $250,000. Mr. Hobart made the only bid, and the sum he named was the minimum named by the receivers under the auspices of whom the sale was conducted. The property was sold subject to a mortgage of $219,000, the debts being $1,250,000, of which $700,000 is on the old stock. The property included in the sale includes parcels in Plymouth, Duxbury, Taunton and Fair Haven.

Mrs. Amelia Dunbar, a stockholder and creditor of the company, having objected to a confirmation of the sale for various reasons, Judge Colt, in the United States Court, Boston, on May 3rd, confirmed the sale of the property and also the receiver's report.

The Rhenish-Westphalian Explosives Co., of Cologne, Germany, have just purchased 577 acres of land in Middlesex County, N. J. The representatives of the company have begun to clear the land preparatory to erecting a plant for the manufacture of explosives. By this means the company expect to be able to avoid the duty on all sorts of explosives, imposed by the Dingley bill. The company will give employment to at least 1000 men.—*New York Telegram.*

By the consolidation of the two great iron manufacturing firms of Schneider and Canet, of Paris, the heads of the two foundries visited President Faure recently and assured him that France now has an iron manufacturing plant rivaling the Krupp establishment in Germany.—*Scientific American.*

MINNESOTA HARDWARE ASSOCIATION.

The Hardwaremen of Minnesota have followed the example of their brethren in other parts of the country, and have organized, under the most favorable auspices, the Minnesota Retail Hardware Dealers' Association.

The initial gathering of the Hardwaremen of this enterprising State, was held in the House of Representatives, at St. Paul, on April 29th.

On the evening previous, prominent representatives of the trade held a caucus, or rather an informal meeting, in the Chamber of Commerce rooms, on the corner of Third and Jackson Streets. About twenty-five retail Hardware dealers of St. Paul and several other points in Minnesota were present, and discussed at length the irregularities in the business of which the dealers as a whole are complaining. Incidentally they also discussed informally proposed plans of organization and the programme of the convention.

When the meeting was called to order on the morning of the 29th, nearly two hundred retailers from all parts of the State were present. Among those either present, or who had signed a circular pledging themselves to take part in the convention, were the following well-known individuals or firms:

Powell & Wakeman, L. Thielman & Son, Charles F. Ladner, A. H. Kendall & Co., St. Cloud; S. A. Anderson & Son, Dawson; L. C. Budow, Henderson; Louis Gewalt, Breckenridge; Northern Hardware Co., Kelly Hardware Co., Duluth Hardware Co., Duluth; J. E. O'Brien & Co., Crookston; A. Hartelt, Norwood; Evenson Bros., St. Peter; A. T. Stebbins & Co., Rochester; Peter Nelson, Red Wing; J. R. S. Cosgrove, W. H. Tomlinson, Le Sueur; Stremel Bros., Bingenheimer-Robinson Co., P. E. Olsen, H. A. Andersen, Minneapolis; C. M. Groschen, St. Bonifacius; Frank Clasviech, Waconia; Mr. Genneviech (Genneviech & Son), Lester Prairie; William Werner, Winsted; J. J. Danek, Silver Lake; W. E. Sivright, Hutchinson; L. P. Albrecht, H. Wadsworth, Glencoe; Alex. Ahlen, Cologne; Charles Schleick, H. Hoffman, Deppe Bros., Louis Peter, Minnesota Hardware Co., F. J. Schulz, Julius Peter, St. Paul; L. A. Ritter, Hutchinson; D. Y. Butler, Brownton; Hines & Byers, Olivia; A. O. Gerde, Sacred Heart; Goodenow & Winter, Granite Falls; Thomas McKinley, L. McKechnie, Cottonwood; P. L. Norman, Monrevideo; Swan Bros., Boyd; J. N. Silver, Clarkfield; Pottratz Bros., Belview; A. A. Lindeman, North Redwood; Hanser & Rieke, Fairfax; H. A. Sauer, Johnson & Johnson, Hauser & Fisher, Gibbon; P. P. Quist, Winthrop; E. S. H. Johnson, Gaylord; M. Malerich, Arlington; J. G. Hoffkin & Co., Green Isle; F. R. Brasie, Monticello; Knapp & Haven, Big Lake; F. Friedley, Becker; How Bros. & Co., Sauk Center; Handy Bros., Lano & Deuhs, Long Prairie; Erickson & Helleckson, Wheaton; McNulty & Helgeson, Litchfield; Peterson Bros., Kandiyohi: M. D. Hartnett, Graceville; A. A. Stone, Morris; H. Hovde, Kensington; Lindquist & Linderholm, Belgrade; A. C. Howe, Glenwood; J. E. Wedman, N. E. Anderson & Co., Hedberg & Johnson, Kensington; Ben Clayton, Taylors Falls; C. A. Victor, Lindstrom; Tombler & Stewart, Wyoming; George P. Becker & Co., Harris; Charles Smith, Rush City; H. N. Welch, Pine City; O. F. Peters, Cannon Falls; Steile & Austinson, Dennison; Held & Helberg, Nerstrand; Gunderson & Sons, Kenyon; Severns & Severns, West Concord; Brown Duckstad, Fertile; M. L. Larson, Warren; Hanson & Kroke, Stephen; Olsen & Holen, Argyle; Larson Bros., Fishers; Johnson & Olander, Hallock; Johnson & Rickansrud, Fosston; O. J. Johnson & Co., Waseca; J. P. Watson, Marshall; L. Blakestad & Co., E. Morton, Blooming Prairie; H. H. Heydon, Chatfield; F. J. Harris, Spring Valley; J. L. Deuel & Co., Le Roy; Gulbrandson Bros., Albert Lea; W. L. Altenburg, Wells; W. B. Gillespie & Sons, Jackson; Smith & Vesselman, Fairmont; M. M. Jenkins, Sherburne.

When the Hardwaremen convened they were greeted by a committee of the St. Paul Retailers' Union, President Jesse Gregg, of the Commercial Club; J. H. Beck, R. A. Kirk and other members of the Jobbers' Union, and a number of local Hardware men.

Senator A. T. Stebbins, of Rochester, was named for chairman, and upon taking the helm briefly outlined the purpose of the movement. These were in brief the protection of all concerned, manufacturer, jobber, retailer and consumer. George Evanson, of St. Peter, was chosen secretary. President McKibben, of the St. Paul Jobbers' Union, was then introduced, and told of the situation as seen from the St. Paul jobbers' standpoint. He said:

The burdens that are distressing you are affecting the entire trade relations of the country. Hard times have developed an abnormal demand for low prices. It used to be that the intelligent buyer was interested, first of all, in the quality of goods to be purchased, but things have changed. Now, nine out of every ten purchasers insist on the price of goods, first, last and all the time. The urgent demand is for cheap goods. As a result, the manufacturer is putting out a tremendous amount of shoddy stuff on the market. The tricky tradesman, with his lying circulars, sees his opportunity in these conditions. These scavengers come and pick up the refuse, the defective goods, and send out their catalogues, advertising the same as first class. I contend that the retail store, properly managed, can sell its goods as cheap as anybody. I believe that many of these questions will be solved in time, but you are here to take time by the forelock and hasten the determination. You are not here to discuss morals, but to protect your business. I believe that there is a necessity for a retail store in a country town. You can put this down, that just as soon as the catalogue fiend has got rid of the retail store that the consumers will pay dearly for their experience. Then will you see prices go up higher than the retailer places them to-day. The only way to down these people is to fight them down. I don't want to sell to a man who proposes to destroy another's business. We used to be told by certain people in Chicago that St. Paul was but a spot on the map, but, by intelligent organization, we have shown these people that we have ceased to be a spot.

President Gregg, of the Commercial Club, spoke a few words in behalf of Mayor Doran, who could not be present, extending to the visitors the hospitality of the city. Secretary Nash, of the St. Paul Retailers' Union, spoke also, after which the chair appointed a committee on permanent organization, by-laws and resolutions, as follows:

J. E. O'Brien, Crookston; E. A. Moye, Duluth; C. F. Stremmel, Minneapolis; E. H. Lloyhead, Faribault; H. E. Humphrey, St. Paul; B. W. Howe, Sauk Center; E. J. Russell, Stephen; W. H. Tomlinson, Le Sueur; J. P. Watson, Marshall; George Kaupp, Blue Earth City; Sid Barteau, Zumbrota; M. R. O'Neil, Graceville; H. E. Cleveland, Minneapolis; Paul Quehl, St. Paul.

The main portion of the afternoon session was occupied in discussing the details of the organization. The committee on resolutions made a report which was adopted.

Digitized by Google

These resolutions provide for such steps as will put an end to the evils which exist now in the way of allowing the retailers to be undersold by catalogue supply houses, and further prescribe what shall constitute the various branches of business between the manufacturer and the consumer, and for the governance of such a plan as will eradicate the trouble at hand. Each member is urged to confine his business dealings to those men who do a legitimate business and who are not attempting to cut into fair competition by unfair methods.

A general discussion was also had in regard to the merits of the movement which had eventuated in the organization. Speeches were made by H. Wadsworth, of Glencoe; C. W. Hall, of St. Paul, and George W. Cope, of Chicago. C. W. Aldrich read a paper in which he treated the subject from the standpoint of the duty of the merchants to each other, and told of the necessity of organization. He advocated honest trading above all things, and thought that if the merchants would make their stocks and stores attractive they would be able to compete with the catalogue men. H. S. Chaffee, of Minneapolis, presented his views on the causes of failure among Hardware dealers, and E. H. Lloyd, of Faribault, told in a felicitous manner of the advantages and disadvantages of buying from traveling men and going to the city for goods.

The principal paper of the afternoon was by C. C. Peterson, of Newark, S. D., who was present as a special guest of the association. He came down to the convention to tell the story of what the retailers of South Dakota were doing to combat the catalogue evil in their midst. Some of the merchants of that State have been working for a year to bring about a meeting such as this, but thus far there have been no definite results. Speaking of the condition of affairs in South Dakota, with reference to this evil complained of, he said:

For many years South Dakota has been the happy hunting ground of the catalogue supply houses. I doubt that any other community of equal population has ever given such liberal patronage to the supply houses as South Dakota has done and is still doing. The consequent loss of trade to the home merchants, taken in connection with losses from bad accounts and poor crops, led me to conclude that South Dakota merchants had suffered long enough, and must be ready for any movement calculated to relieve the situation, and after some preliminary investigation and correspondence I issued a circular letter to the trade on Jan. 1, 1897, proposing that we should organize for self-protection.

There are about 2000 individuals, firms and corporations engaged in retailing in the State. Out of these I selected about 1000 of the best standing, to whom I mailed the circular letter. I have received answers from 50 of these, in all cases from the best merchants.

In my work I have found the chief obstacles to progress in their order of importance to be: First, the slovenly apathy of a great majority of the dealers themselves; second, the foolish and malicious opposition of certain would-be imitators of the department stores; third, the expense of the work.

To overcome the first obstacle it is necessary that some disinterested man or men, whose motives are above suspicion, shall talk or write to the drowsy ones, and keep at it until those who are sleeping have been aroused. We shall guard against wasting endeavor on those who seem to be sleeping but in reality are dead. The old style of retailer is doomed. No amount of organization will save him if he is unable or unwilling to learn. There is no anodyne for the indiscriminate credit-giving, and antiseptic for shoddy, slip-shod storekeeping. Pseudo merchants will whine in vain for protection from the competition of the man who studies his business, who takes thought for the comfort of his customers, anticipates their wants, exercises good taste and courtesy, advertises judiciously, keeps his stock clean, inventories semi-annually and runs a well-lighted, cheerful, inviting store.

Let us not attempt to lumber up our organization with back numbers. It is to the live fellows, who are capable of receiving instruction and keeping abreast with the times, that we must appeal. They, and they alone, will form the phalanx that is destined to land the catalogue shark high and dry.

To this class of men it is only necessary to state your case, and they are with you. The question simply narrows down to the best way to rouse the remainder of the trade. It seems to me that the only way it can be accomplished is through liberal use of printers' ink. I can see no promise of betterment in the situation unless the association is made general. Our plan is to publish a monthly magazine devoted exclusively to our interests and to our organization movement. We propose to raise money enough to send a prepaid copy of the paper for one year to every retailer in South Dakota. We hope to make our publication so catholic and cosmopolitan that it will circulate anywhere in the United States, and be as interesting and helpful to the merchants of Minnesota as to their South Dakota brethren. This, we believe, is the most effective way to agitate the matter, and the most economical as well.

Having once roused the trade, everything else will be plain sailing. If it were not such a serious thing to most of us, it would be the most ridiculous thing imaginable, that a fellow who cannot obtain a rating for more financial strength than $40,000 should demoralize the business of all the merchants of not only South Dakota, with a combined capital of $10,000,000, but the greater portion of the great Northwest as well.

The second obstacle I mention is the would-be imitators of the department store. They are sustained by the hope that if they can by sheer force of slashing, blow and bluster, eventually drive all their competitors into bankruptcy, there will be a sure road to fortune open to them. Fortunately such fellows are in a hopeless minority. There will always be cases of wrong-headedness, but means will be found to discipline the recalcitrants without such great cost and demoralization of business as is now the inevitable accompaniment of the meteoric career of a cutter and slasher.

The following gentlemen have been elected as officers for the ensuing year:

President, Charles Ladner, St. Cloud.

Vice-president, A. T. Stebbins, Rochester.

Executive Committee: J. E. O'Brien, Crookston; W. H. Tomlinson, Le Sueur; Clement Schroeder, Mankato; M. R. O'Neil, Graceville; John Karst, Stillwater.

Mr. Davis, of Minneapolis, made the suggestion that there should be a member from one of the two large cities on the executive committee, upon which Mr. O'Brien withdrew his name and Frank Stemmel, of Minneapolis, was substituted. Later in the day it was decided that Mr. O'Brien was too valuable a man to spare, and he was put back on the committee, with Paul Quehl, of St. Paul, as the seventh member. The executive committee will select the secretary and treasurer.

The work of the following morning was devoted to a consideration of the constitution and by-laws, which were submitted by the committee on permanent organization. Except in a few minor details, the original draft of the constitution was adopted.

The constitution and by-laws are as follows:

CONSTITUTION.

Article I. Name and Object.

Section 1. The name of this association shall be the Minnesota Retail Hardware Association.

Sec. 2. The object of this association shall be to pro-

Digitized by Google

mote the welfare of the retail Hardware trade of Minnesota.

ARTICLE II.

Section 1. Any person, firm or corporation in Minnesota engaged in the business of selling Hardware, and known and recognized as a regular retail Hardware dealer, may become a member of this association.

ARTICLE III. OFFICERS.

Section 1. The officers of this association shall be President, Vice-President, Secretary and Treasurer, and seven members who, with the President and Vice-President, shall constitute an Executive Committee.

Sec. 2. The President, Vice-President and Executive Committee shall be elected annually by ballot, and shall hold office until their successors have been elected and qualify.

Sec. 3. The Secretary and Treasurer shall be appointed or removed by the Executive Committee. The Treasurer shall receive and disburse the funds of the association under the direction of the Executive Committee, keeping a careful account of the same. The Treasurer shall pay out the funds by a voucher signed by the President and Secretary. The Secretary shall be under the direction of the Executive Committee, and his duties shall be assigned by them.

Sec. 4. The Executive Committee may pay the Secretary such salary as may be deemed necessary, and a sufficient bond shall be furnished by the association for the Treasurer.

Sec. 5. In case of a vacancy in any of the offices of this association the same shall be filled by the Executive Committee until the next annual meeting. The Executive Committee shall perform the duties of an Auditing Committee and examine the books of the Treasurer and Secretary and report their condition at the annual meeting of the association.

A majority of the Executive Committee shall constitute a quorum for the transaction of business.

ARTICLE IV.

Section 1. The regular meeting of the association shall be held annually on the second Wednesday of February at such place as may be designated by the association at its previous annual meeting.

Sec. 2. The Executive Committee is subject to the call of the President.

Sec. 3. It shall be the duty of the President, or in case of his inability to serve, of the Vice-President, to exercise supervisory control over the affairs of the association and preside at all meetings of the Executive Committee, and to carry out and enforce all measures adopted by the association calculated to improve the condition of the Hardware business.

Sec. 4. The President shall appoint for each county one member, whose duty shall be to obtain membership in this association and encourage the formation of local organizations.

Sec. 5. The presiding officer shall appoint at the annual meeting a Sergeant-at-Arms.

Sec. 6. Amendments to the Constitution and By-Laws may be made at any regular meeting by a vote of at least two-thirds of the members present.

BY-LAWS.

Article 1. The membership fee shall be $2.

Art. 2. The annual dues, which shall be paid in advance, shall be based on the capital invested in the business of the members as follows:

$5000 or less, $3 per year.
$5000 to 10,000, $5 per year.
$10,000 to $15,000, $7.50 per year.
$15,000 or over, $10 per year.

Art. 3. Twenty-five members shall constitute a quorum to transact business at any meeting.

Art. 4. Each firm shall have one vote at any meeting of this association.

Art. 5. All fees and dues must be paid before a person can be recognized as a member or become entitled to act in this association.

Art. 6. The Sergeant-at-Arms shall guard the door and see that none but members be admitted except by order of the presiding officer.

There was animated discussion on the question of the annual dues. Mr. O'Brien, a member of the committee on permanent organization, favored a minimum initiation fee of $5 and ranging to $15, according to the amount of capital invested in the Hardware business. The association should start out strong, and be sure that it had sufficient funds to meet all emergencies.

Another section, headed by Senator Stebbins, thought it wise to have a small initiation fee, ranging from $3 to $10, and this the Senator embodied in an amendment, which finally prevailed. Senator Stebbins' idea was to have every retailer in the State enrolled in the association, and to accomplish that, it would be necessary to have a reasonable initiation fee.

One of the members suggested the substitution of the word "union" for "association" in the title of the organization, but the convention thought "association" the proper term.

Senator Stebbins moved that the association meet in St. Paul next year, and Mr Davis put in a plea for Minneapolis as the place for holding the convention. Mr. Stebbins withdrew his motion, and Minneapolis was selected.

Mr. O'Brien, of Crookston, precipitated some discussion by his motion that the executive committee be empowered to print the proceedings of the convention in pamphlet form and have copies of the same transmitted to all the members. This would entail a cost of about $100, but he thought the value of these pamphlets would more than compensate the outlay. He was upheld in his stand by Mr Davis, of Minneapolis, who said that the convention owed it to its own dignity to follow out this course. Some of the members were doubtful as to the propriety of going to such an expense at the outset. The motion to print the pamphlets passed with a few dissenting votes. Before the session ended all present signed their names to the membership rolls.

TEXAS HARDWARE JOBBERS.

The Texas Hardware Jobbers' Association met in annual convention at Houston, Tex., on April 21st, James Moroney, of Dallas, presiding; Robert Bell, Jr., of Weatherford, secretary.

The meeting was purely an executive one, and none of the subjects discussed are given out for publication. The old officers were re-elected, as follows: James Moroney, of Dallas, president; F. A. Heitmann, Houston, vice-president; Henry Deutz, second vice-president; Robert Bell, Jr., Weatherford, secretary-treasurer. Executive committee—A. P. Duncan, Waco; W.L.Sanford, Sherman; Charles Nash, Forth Worth; A. Krakauer, San Antonio.

The convention adjourned, to meet in Waco at a date to be selected by the executive committee.

The following are the members: Hurlbut Hardware Co., Brownwood; Huey & Phillips Hardware Co., Moroney Hardware Co., Dallas; John Stiffian & Co., El Paso; Nash Hardware Co., William Henry & Co., Fort Worth; Bering & Cortes, F. A. Heitman & Co., Houston; Deutz Bros., Laredo; H. S. Bettes Hardware Co., Paris; Roberts, Hardwicke & Taylor Co., Sherman; Krakauer, Zork & Move, San Antonio; Daglash Hardware Co., Tyler; McLenden & Duncan, Breustedt Hardware Co., Ed Strauss, Waco; R. E. Bell, Weatherford.

Mr. Mandelbaum, representing the Southern Hardware Jobbers' Association, and Mr. Shapleigh, of the National Hardware Jobbers' Association, were present and participated in the proceedings.

The visitors were given a trip down the bayou to San Jacinto battle-ground and on to Morgan's Point, where dinner was served.

Insects are, for their size, the strongest members of the animal creation. Many beetles can lift a weight equal to more than five hundred times that of their own bodies.

The oyster is one of the strongest creatures on earth. The force required to opened an oyster is nine hundred times its weight.

Review of the Markets.

Hardware: Few if any changes in prices are of noted importance. An improved movement is apparent, but while the volume of business up to May 1st compares favorably with last year, this month will do but little more than hold its own by comparison; as it marked last year the first month that gave much encouragement to the spring trade.

One advantage to be gained by the careful methods of buying in vogue at the present, is that stocks will be found in satisfactory shape for fall trade if business assumes the greater degree of strength so anxiously looked forward to.

Collections continue favorable, and merchants are getting into a better condition for safely making purchases of desirable goods.

Prices on general Hardware are still very low and in favor of sanguine buyers, the movements of stock being too limited in amount to stiffen the tone of the markets and lessen the apprehensions of the manufacturer that the present are not bottom prices.

The reorganization of the Atlas Tack Co. under new management has a tendency to make tack quotations sufficiently indefinite until the policy and discounts of the new company shall be announced. Several outside companies, having expanded their output since the Atlas company has been embarrassed, will soon find the strength of a competition not previously credited as important.

The disposition among some of the manufacturers to seek the retail trade direct is naturally becoming curbed under the fear of the retail trade organizations constantly being added to by the dealers in a number of States; the formation of these associations will exert a healthful influence on the business of the future and prove of some benefit in restricting the trade to natural channels.

Wire Nails: Arising from the fact that the retail dealers are not in full supply, from the previous difficulty in regard to prompt shipments by the mills, their light stocks are keeping the demand fairly active, although, of course, not what it was two months ago. The mills have not to any great extent lessened production, although some outside competition has made a market less strong than has obtained for some time. Car load lots at mill, while nominally f. o. b. $1.40, under special conditions this quotation might be shaded 5 cents a keg. New York prices are for smaller lots from store, $1.60@$1.65.

Cut Nails: With a moderate demand, cut nails continue under similar conditions than prevailed at the time of our last report. A limited demand on orders, covering an assortment for daily wants, with prices remaining as previously: Car load lots delivered, New York, $1.40; Philadelphia, $1.38; Boston, $1.42; smaller lots from store being held at 10 cents a keg advance.

Linseed Oil: The Dean Linseed Oil Co., quote as follows: In lots of less than 5 barrels, 33 cents per gallon; in lots of 5 barrels or more, 32 cents per gallon; Boiled Linseed Oil, 2 cents per gallon higher; Calcutta Oil, 50 cents per gallon.

THE CHICAGO TRADE.

The backwardness of the spring weather has delayed purchases of a considerable number of spring goods until recently.

We are pleased to state, however, that the last ten days have developed quite an improvement, and the request from customers has become quite common to have orders rushed through with all possible dispatch.

Retailers have universally come to the conclusion that the bottom has been reached in prices, and stocks of goods have been materially reduced, hence there is little question as to prices. Goods sell more readily if they can be delivered immediately, and a decided improvement is noticed in the volume of mail orders.

There is a strong demand for nails, plain and barbed wire, quite an activity in roofing plates, refrigerators, lawn mowers, scythes, snaths, steel goods, poultry netting and wire cloth, and if the present satisfactory condition of business continues for the next sixty days, we will have liitle to complain of with respect to our spring trade.

WELLS & NELLEGAR CO.

THE PHILADELPHIA TRADE.

While this section of the country has much to be thankful for in view of the fact we have been spared disastrous floods, such as are now afflicting the Southwest, still we cannot report any great increase of trade over last month.

Business is moving along on an even keel, and, while a fair number of orders is reported daily, still the hand-to-mouth policy is still pursued, and stocks are everywhere kept at a low figure.

Even the very low prices which have prevailed for some time do not seem to tempt buyers into speculative purchases, and yet it can hardly be doubted that many goods are at, or below, the cost of manufacture, and any turn for the better must almost inevitably bring higher values.

The bicycle fever is again with us, and while the demand is apparently for the cheaper grades of wheels, still a large number is being sold, and the army of riders is on the increase.

Bicycle sundries are maintaining their phenomenal lead, and the business in this line this year is a marvel to every man who does not own a bicycle, and, therefore, does not know the number of wants which the bicycle brings to every owner.

Prices show very little change, barbed wire being at bottom figures, and nails holding quite firmly at the advance of ten cents per keg.

Collections appear to be somewhat better, and as labor is gradually finding more employment, it is natural to hope that the volume of money in circulation—as well as the volume of trade—will gradually and steadily increase.

BIDDLE HARDWARE CO.

THE PITTSBURG TRADE.

We are having a late spring, which has a tendency to delay trade. Last year screen doors and windows were largely sold by the jobbers before May 1st, and second or-

Cleveland Bicycles.

THE KEEN BUYER

Always compares the price of an article with its honest value as he understands it; but it is not always easy to determine the value of a **Bicycle**, as beneath the gaudily finished exterior of a cheap machine there lurks defective material and inferior workmanship.

Our '97 catalogue tells how to invest $100 or $75 in a bicycle and get the value of your money Write for it; a postal will do!

H. A. Lozier & Co.,

CLEVELAND, OHIO.

Send 4 cents postage for our booklet, "Shakespeare and the Bicycle." 12 special designs in colors by F. Opper, of "Puck." Mention this paper. . . .

ders were coming. This year they are only now beginning to move to the smaller trade.

The bicycle trade keeps up well, despite the continued rain and dark weather we have had. When country roads get into riding order, there should be a large demand from the smaller towns and villages.

Bids were opened recently by the United States government office for building locks and dams on the upper Monongahela River and for a short distance above Pittsburg on the Allegheny River. When the Monongahela navigation purchase by the government is completed, which is expected to be accomplished by July 1st, and the above improvement finished on the Monongahela, we will have free navigation to Fairmount, W. Va., opening an immense field of bituminous coal, to cheap transportation to the cities of the Ohio and Mississippi valleys.

Now that the tariff bill has reached the open Senate, we hope for a short debate, quick passage and adjournment of Congress. LOGAN-GREGG HARDWARE CO.

THE ST. PAUL TRADE.

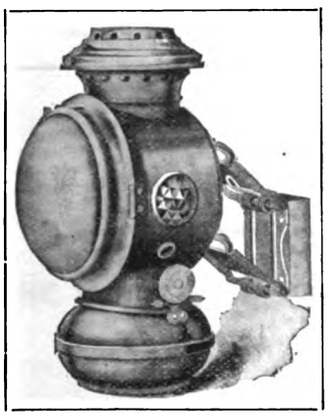
We are very glad to say that business is very much better than it has been so far this year. We are now enjoying good spring weather. The farmer is busy putting in his seed, and the ground has never been in better condition for a good crop than it is at the present time. With business crowding us, we are not hearing as much about cut prices as we were before. The wire nail market still continues on a cost basis, but as other goods are selling very freely, we do not mind selling a few staple goods without profit. C. W. HACKETT HDWE. CO.

THE BUFFALO TRADE.

There seems to be very little at the present time that would be of special interest to the trade.

The unfavorable weather of the past few days, weakness in the iron market and only fair collections, have had a tendency to hold trade back.

The volume of business for April was an improvement over a a year ago, and when we take into consideration the present prices on many lines of goods, as compared with the prices of a year ago, we feel that we have little cause for complaint. If the present favorable weather continues, we look for a good business this month and hope we will all realize our anticipations to the fullest extent.



WEED & CO.

The monthly meeting of the New England Hardware Dealers' Association will be held at the United States Hotel, Boston, on Wednesday, May 12th, at 6:30 P.M. Dinner will be served at 6:45, and a business meeting will take place immediately thereafter. The matter of having the June meeting at some seaside resort will be acted upon. Other interesting topics will be discussed. The association will be favored with music by a mandolin, harp and guitar club.

The New England Filteration Co., of Boston, are putting on the market a pure washed filteration quartz free from all impurities. It can be easily cleaned by washing in hot water and drying in the sun or on the stove, and used over again; can also be used for packing any filter now in use, and is said to give the very best satisfaction.

The Norwalk Lock Co., having given up their New York store, Mr. Cowles, their representative, has secured office accommodations at No. 80 Chambers Street, a stock of their goods being kept by Underhill, Clinch & Co. as formerly at No. 94 Chambers Street, as they are agents for New York City and the surrounding territory.

Landers, Frary & Clark have removed from the premises so long occupied by them on Broadway, and are now located at No. 82 Chambers Street, New York, the old store of the Norwalk Lock Co.

Aladdin's Lamp THE NEW ONE

Price, $2.50.

Is unapproachable in the lamp makers' art. Its new features make it the seller of the year. Oil cup enlarged; reservoir and lens hinged and cannot be lost; patent lighter that beats the band; double unbreakable springs can be removed; without solder or rivets. The Perfection Window Mirror.

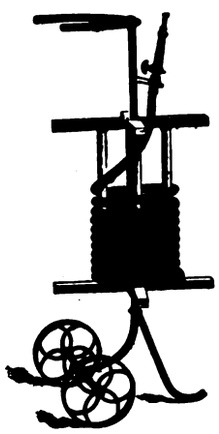
Bayer & Co., No. 28 North Thirteenth Street, Philadelphia, Pa., are engaged in placing upon the market a clever novelty in the shape of the "Perfection Window Mirror," which presents features which would make it undoubtedly as useful as it will be found entertaining. It will rapidly be found a favorite with the ladies, and prove more of a necessity than a luxury. By its aid, the busy housekeeper when in the upper part of the house, can ascertain who is ringing the doorbell, and thus, in the numerous calls of canvassers, peddlers, etc., the trouble and annoyance of

going up and down stairs can be frequently avoided. We give a graphic illustration of this ingenious window mirror, showing its pleasing utility, giving as it does a kaleidoscopic view of all that is happening on both sides of the thoroughfare, which covers in its scope a number of blocks. It is made to contribute endless enjoyment to the many invalids or the aged, who are confined in the house and otherwise incapable of varying the customary monotony of the sick room, and there is no physician but who would recommend its use in numerous complaints of a nervous character, as its advantages as a remedial agent by affording a pleasing diversity of mental effort would be conceded, upon even a slight investigation of its merits. In its use no necessity exists of raising the window, and the mirror can be placed on any floor. In the latest construction of the "Perfection," the plans include a rain shed extension, the arms are made stronger and heavier, which prevent their shaking, and to make it perfectly safe in all kinds of weather. It is provided with a heavy clamp having a thumb screw fastening; they are made waterproof, and to prevent rusting, are galvanized. Full information and circulars of prices will be forwarded upon request.

"Where is your clerk?" asked the pocket knife handler as he opened and felt of all the blades before he let go. "He got too fresh and I had to bounce him." "Why, I thought he was a nice chap, what did he do?" "Well, a lady came in and asked for a stove lifter and the smart cuss handed her a pint bottle of gasoline, which he said was accompanied with the usual guarantee."

Advertising is the most important part of every business under the sun. There is no question about that. And still it is the most generally neglected. No man can do business without letting people know, in some way or other, that he wants their trade. He can stand on the top of his factory, machine shop or lumber pile, swing his arms and yell—that is advertising—but he had better go about it in a surer way.—*Northwestern Lumberman.*

G. I. Mix & Co., manufacturers of spoons, etc., represented in this market so long and well by W. L. C. Glenny, have established their quarters in the store occupied by Harmon & Dixon, No. 100 Chambers Street, New York.



William R. McCullough, representing as New York agent the well-known axe handle concern, Turner Day & Woolworth Mfg. Co., has removed from his old location at No. 82 Chambers Street, and can now be found at No. 100.

The man who invented the cone-shaped glass lemon squeezer made $50,000 out of it and it is said was lately offered $100,000 for four other different inventions of the same simple and practical kind.

The "Brasher $16 gold piece," which was struck at Newburgh, N. Y., in 1786, was the first upon which "E Pluribus Unum" appeared.

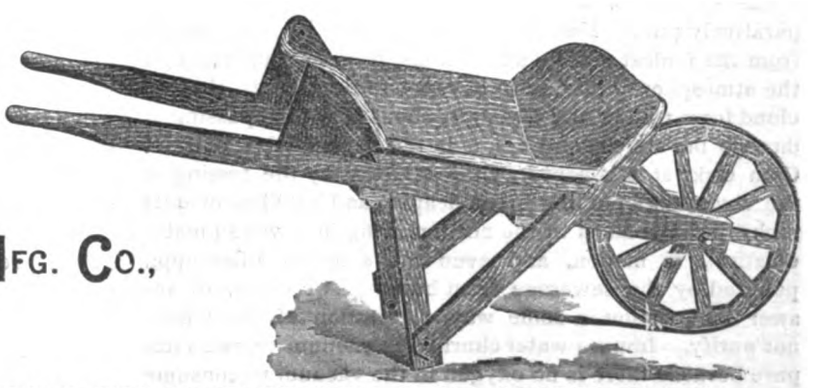
THE——

Martin & Gibson Mfg. Co.

BUFFALO, N. Y., U. S. A.

Our Name Plate.

Our Mails in the Early Days.



"In Washington's first term an effort was made to speed the mails—to move them at the rate of one hundred miles in twenty-four hours, or about four and a half miles an hour," writes ex-President Harrison in his "This Country of Ours" article in September *Ladies' Home Journal.* This would have been a notable advance, for the carriers were then taking nearly thirty hours between Philadelphia and New York. The roads were bad and there were many slow ferries. . . In 1776 there were only twenty-eight post-offices in the Colonies; in 1795 there were four hundred and fifty-three, and in 1895 there were 70,064. The rates of postage when the department was organized under the Constitution were high; for thirty miles, six cents for one letter sheet; for sixty miles, eight cents; for one hundred miles, ten cents, and so increasing with the increased distance to the maximum, twenty-five cents for distances over four hundred and fifty miles. Stamps were not used in those days, nor was the sender of a letter required to pay the postage in advance. The postage, six cents or twenty-five cents, as the case might be, was written by the Postmaster on the letter, and if the sender paid the postage the word "paid" was added; if he did not the postage was collected of the person to whom the letter was addressed. These rates soon yielded a surplus over the cost of the service, spite of the franking privilege which the law gave to Congressmen and the heads of departments. . . The demand of the newspapers and periodicals of every class for cheap postage, seconded bv their subscribers, has led to a reduction of rates greatly below the actual cost to the government. In his report for 1892, the Postmaster General, after stating that the present letter rate pays twice the cost of the letter mail, says that the book and newspaper mail is carried at a loss of six cents a pound. In recent years the Postoffice Department has been characterized by a very progressive spirit, and it is now rendering, not a perfect service, but a high-class service. No other department has more nearly kept pace with the marvellous development of our country."

For a time, if one could judge from appearances, there was a notion among many women who rode bicycles in this town that any clothes would do for the sport provided the skirt was short enough, etc. But there has been a change in this respect. And although the number is not so very large as yet, it is big enough to show all the signs of a repetition of what has already taken place in Paris. There a woman is just as particular about her appearance when she mounts her wheel as when she drives in a dogcart or sits on top of a coach. There can be no doubt that the insignificant appearance of many pretty women while cycling has been due to their carelessness in the matter of clothes. It is just as possible to look spick and span, tailor made and yet free in the matter of action, on a bicycle as on a horse. It is to be hoped that more will learn the trick. —*New York Sun.*

Pure Water and Pumps.

The following interesting article in regard to the purification of water, and the well-known article manufactured by the St. Joseph Pump & Mfg. Co., St. Joseph, Mo., is taken from a recent issue of an exchange published in Kansas City, Mo.: The most elaborate chemical analysis of potable water ever made was by the Royal River Pollution committee of England, and later in the city of Memphis, our own country, shortly after the terrible scourge of yellow fever. The increased percentage of mortality of this Memphis committee caused the city government to appoint committees to examine the supply of drinking water. This committee recommended at first the filling up of all shallow wells and cisterns in their city, after making a thorough examination of many samples of water from different geographical formations. At about this time the ingenuity of man was demonstrated by the invention of the "Elevator Purifying Pump," which was universally adopted and placed upon cisterns and wells, and in no instance where these pumps were used for drinking and bathing purposes has there been a taint of any poisonous disease.

The results of these two direct tests are confirmed by scientific investigation. The healthiest parts of the country are where the water used is obtained from springs, mountains, brooks or deep wells. It is a startling fact, and yet within the perception of any reasonable person of mature years, that we will still persist in using water to drink, cook and bathe in which is decidedly impure and in many cases absolutely dangerous. How many of the sudden and mysterious kinds of disease are caused by poisonous water? There are hundreds of such cases where physicians have been puzzled until persistent investigation has discovered the cause. Perhaps some cesspool too near the water supply, some drainage or leakage into well or cistern. Persons in good health can take daily doses of poison in small quantities without immediately feeling the effect, but after a time the aching bones, stiff muscles, etc., indicate that something is wrong. The important questions next to consider are these:

First—What is pure water?

Second—What waters are naturally pure?

Third—How to purify impure water.

First—Pure water consists of twenty-four parts of oxygen and seventy-six parts of hydrogen. Pure water is soft, tasteless, colorless and odorless. It is particularly agreeable to the sense of feeling.

Second—Spring water, deep wells and mountain brooks are relatively pure, because they have never come in contact with impure matter.

Third—Many scientific men hold that a moving stream of water will purify itself in the course of a few miles.

Relying on this view, many of our people use water pumped into reservoirs which are in close proximity to sewerage or drainage, commonly known "waterworks" water, and which was received but a few miles above the drainage and sewerage of another city. Water taken to sea in casks "works," as the sailor terms it, and becomes comparatively pure. Nature answers it when it draws water from the foulest pools and streams, passing it up through the atmosphere in the form of vapor to the clouds, then in cloud form rolling and tossing it about and then passing it through the atmosphere again in the form of dew or rain. Open casks at sea kept in vital agitation by the tossing of the waves, the bubbling brook, leaping and bubbling over its rocky bed the lakes of the north moving in waves so mathematical, in motion, and even the sluggish Mississippi, polluted by the sewerage from hundreds of cities, all answer the question in some way. Agitation of itself does not purify. Impure water churned in vacuum remains impure because there is no oxygen in the vacuum to consume the organic or impure matter.

Prevention is so much better than cure that our first aim should be to so locate our wells as to avoid all possible drainage from cesspools, manure lands, barnyards and graveyards. Stored rain water is rendered "suspicious" because of the decayed shingles, rotting leaves in the gutters, and the organic matter is carried to the cistern. This is what gives to stored rain water its color and disagreeable smell. Stored rain water can be readily purified by oxygenation, which is accomplished by forcing air through it, and in many sections of our country is the only source from which we can obtain pure water with economy. The cheapest mode of forcing air into the cistern or well and raising the water therefrom is by the use of one of the celebrated "Perfection Water Elevator and Purifying Pumps."

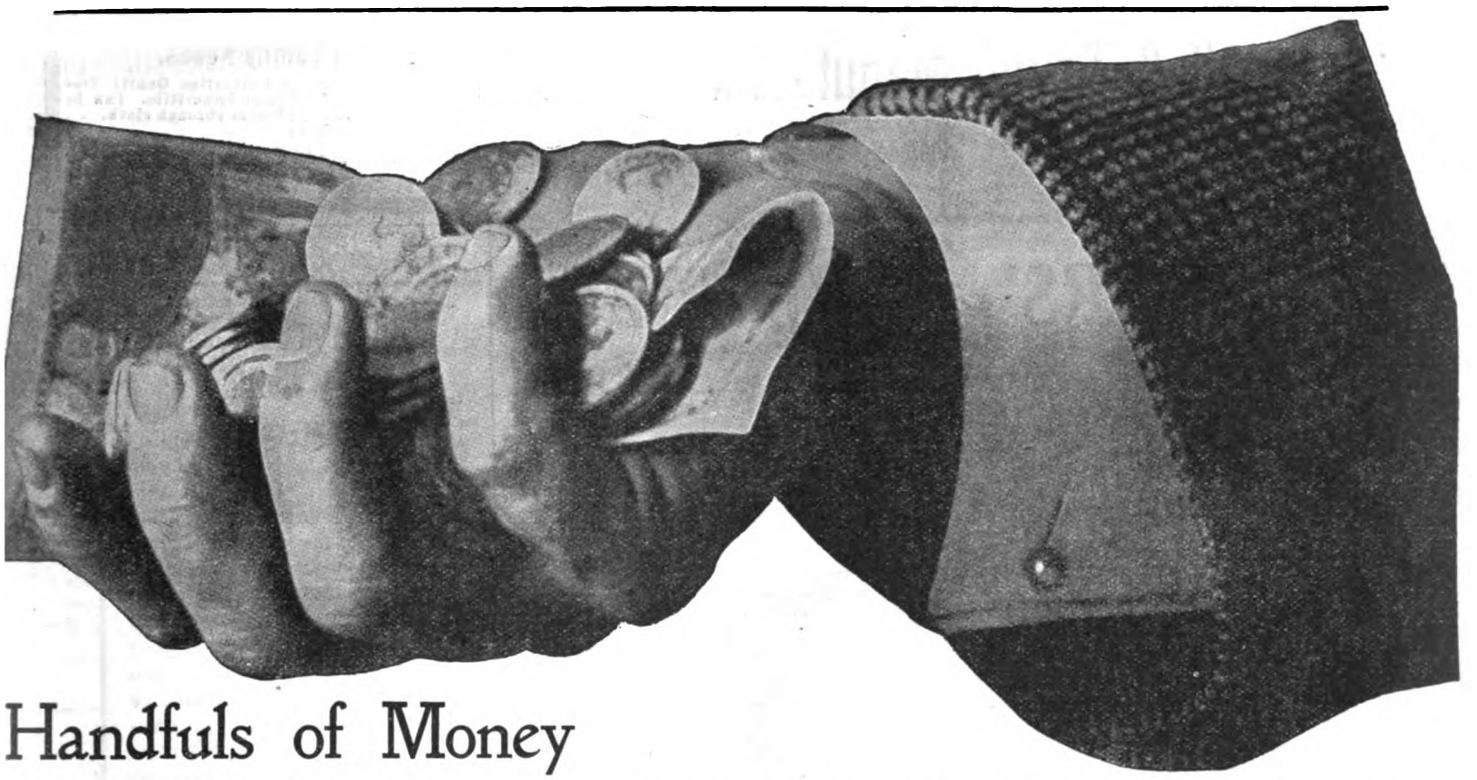
Secure pure water, drink it, bathe in it, and the pores of the skin, as well as the more delicate membranes of the stomach, will open their ten thousand mouths and thank you.

"Machinery," by Bishop Potter.

At the annual supper of "The Church Association for the Advancement of the Interest of Labor," given last night at No. 23 St. Mark's Place, New York, Bishop Potter said among other things: "The great causes of the general ill-feeling and uneasiness among the laboring classes in the United States to-day may be divided into two classes—machinery and the manner in which the capitalist looks down upon the men who labor for him. Chief of these two is machinery. It is doing away with intelligence in labor. It is turning the laboring man into a simple idiot. Not long ago I visited a large factory in this State and was much impressed with what I saw. The owner proudly showed me around pointing out the manner in which labor was simplified. I saw a young man sitting before some sort of a large hammer. He sat with his legs crossed and all his work consisted in shoving into an opening in the machinery a small piece of iron. He would turn the metal two or three times, throw it into a large box, and take another piece. That was this man's work day after day, week after week. No wonder that at nighttime he drank, gambled, and fought. He had to; otherwise he would go mad. How many of us would stand this and not cry out? Not one of us but would become a striker. Myself among the first.

"The master of to-day looks down upon his men. He treats them as though they had no souls. They never get a chance to rise. Daily they drift further apart. In former days the owner of a large establishment took an interest in his servants. He knew every one by name, and promoted and helped them. To-day nothing like that exists. Few owners know any of their employees even by sight. Employers are constantly on the lookout for new inventions which will save money and throw out of work as many men as possible. The laboring men must be looked after if trouble is to be averted. They must make the capitalist respect their rights. Let them stand on their feet and use their voices.

"This association is looked upon as a dangerous and revolutionary one, because it tends to unite the Church with the laboring man in his great struggle. Say what they will against it, but I for one announce that from to-day on the Church of God is with the laborer."



Henry White, Secretary of the United Garment Workers, spoke about the unions.

"The Church, although despised by many," he said, "is still a great organization and almost as powerful as the unions."—*New York Sun.*

Handfuls of Money

Are made by thousands of merchants who use our systems for handling transactions between clerks and customers in their stores. Fill out and mail to us the blanks below and we will send you a handsomely-illustrated pamphlet describing one of these money-making systems in use in stores like yours.

When our agent is next in your vicinity he will call with sample registers and further explain the system; or if the particular system we send should not be satisfactory, he will, by aid of the information on the blanks, assist you in devising a system suited to your special needs.

When the agent calls he will supply you with our latest book on window dressing, and also a book containing valuable hints to clerks.

It is understood that sending this information to us places you under no obligation to buy.

Address Department H, The National Cash Register Company, Dayton, Ohio, U. S. A.

Answer the questions below.

Give You Your Money's Worth.

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"A Good Medium for Advertising."

Edw. K. Tryon, Jr., & Co., Philadelphia, Pa. [*Bicycles, Fire Arms, Sporting Goods*]: We consider the Hardware dealers as the legitimate and best class of trade to handle bicycles, and as HARDWARE reaches a great number of them we consider it a good medium for advertising this line. We think that sooner or later the bicycle business will be done almost exclusively through the Hardware trade, and in order to keep our line continually before them we shall continue to advertise in your columns.

Well Worth It.

I. B. Bolles, Wareham, Mass. [*Hardware and Farming tools*]: Enclosed find check for $1 for HARDWARE for the year 1897. We think it is well worth it. . . . .

CONDENSED BUSINESS WISDOM.

"THE BEST OF ITS CLASS."

John M. Holladay, Holladay, Va.: HARDWARE is so nicely gotten up, and so well edited, giving such a variety of information, yet costs so little, that I cannot see how any dealer in Hardware can afford to be without it. It is the best paper of its class.

"THE BEST THING OF ITS KIND."

W. L. L. Morrow, Purdy, Mo.: I regard HARDWARE as the very best thing of its kind I have ever seen, and really at the low price of subscription I cannot see why it is not in the hands of every dealer in Hardware.

"WOULD NOT BE WITHOUT IT."

H. M. Seitzinger, Wilkesbarre, Pa.: Enclosed please find my check for $1 for renewal of subscription to HARDWARE. I would not be without your paper nor should any one handling electrical supplies.

"JUST WHAT HAS BEEN WANTED."

W. P. Walter's Son, Philadelphia, Pa: Enclosed please find $1 for renewal to HARDWARE. We think your paper is just what has been wanted for a long time for the retail Hardware trade.

"WELL PLEASED WITH 'HARDWARE.'"

W. W. Johnston, Bartlett, Ohio: Enclosed find $1 to pay my subscription to your journal. I am well pleased with the paper, and think it would pay all dealers in Hardware to take it.

"LIKES IT."

A. D. Matthews, Liberty, Me.: Enclosed find check for $1 to pay for HARDWARE for another year. The paper I like much.

"WELL WORTH THE MONEY."

A. A. Case, Pittsford, Mich: Enclosed please find $1 to pay for my subscription to your paper. I think it well worth the money.

"ALL WANT TO READ IT."

H. E. Iseman, Prattsville, Mich.: The boys all want to read HARDWARE as soon as it reaches us, and are delighted with it.

"WHAT EVERY MAN WANTS."

C. A. Fisk, Helena, Mont.: HARDWARE is what every man wants, who hopes to gain success in the Hardware business.

"A HELP TO OUR BUSINESS."

N. G. Bickford & Son, Mount Holly, N. J.: Please send us HARDWARE for one year from January 1st. Enclosed you will find the price of subscription. After examining the copy sent us we find the paper will be a help in our business.

"THE BEST OF ALL PAPERS."

S. I. King, Brighton, Mich.: I received a specimen copy of your paper dated October 10th, and I like it best of all the papers I have ever seen, devoted to the retail trade. Enclosed find $1 for which send me HARDWARE one year.

"CANNOT FAIL TO HELP OUR BUSINESS."

J. C. Tanger & Co., Hanover, Pa: Please find $1 enlosed for one year's subscription. After examining a specimen copy, we think it one of the best, and that it cannot fail to help us in our business.

"WOULD NOT BE WITHOUT IT."

H. D. Wyman, Mt. Dora, Fla.: You will please find enclosed check for one year's subscription to HARDWARE. I think a great deal of your paper, and would not be without it.

"NO JOURNAL ITS EQUAL."

Hendricks & Stall, Thayer, Kan.: While we are doing business a great number of miles from New York, we know of no journal that we consider the equal of your paper.

"MUCH PLEASED WITH IT."

Chas. N. Vittum, Laconia, N. H.: I am pleased to be one of your subscribers, as I am very much pleased with HARDWARE. I think it a very useful and interesting journal.

"WORTH WHAT IT COSTS."

Spence & Co., Keene, N. H.: Enclosed find $1 to pay for HARDWARE for one year. We think it well worth what it costs.

"CANNOT GET ALONG WITHOUT IT."

T. C. Lamson, Elizabethtown, N. Y.: Please find enclosed $1 for HARDWARE for one year. Can't get along without it.

"READS ADS. AND ALL."

Fred. A. Welles, Milwaukee, Wis.: I like your paper first rate, and I read the advertisements as well as the rest.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Thomas J. Dowling Co. capitalized at $20,000, will do business in the plant formerly owned by the Albany Stove Co. They will manufacture iron and steel work for building purposes, artistic work for fences, stairways, stoops, fire escapes and towers, stoves and castings of all kinds. The directors are Thomas J. Dowling, James H. Carroll and John W. McNamara, of Albany.

Columbia, S. C.—The Denmark Mfg. Co. was chartered recently. It will manufacture agricultural implements. H. H. Crum is president; I. Rich, vice president; J. E. Steadman, treasurer, and F. E. Holmes, secretary.

Florence, Ala.—The Florence Plow Handle & Mfg. Co. has been organized to manufacture plow handles, bent woods, etc.

Kansas City, Mo.—The Herrick Refrigerator & Mfg. Co., capital, $15,000. Incorporators, W.C. Herrick, Dennison R. Towne, A. J. Nutter and others.

Myerstown, Pa. — The citizens of this place have accepted a proposition submitted by W. E. Edgett, Smithbridge, Mass., to establish a machine manufacturing plant in the town, employing 100 men, provided the citizens subscribe $15,000 toward the enterprise. Building will begin at once.

St. Louis, Mo.—The Harrison Novelty Mfg. Co. has been incorporated by Frank J. Harrison, P. J. Ledwidge, Robert G. Gregory and others. Capital stock, $10,000.

Warren, Mass.—The Belknap Valve Co. will probably locate at Warren. It will be a new corporation, with a capital stock of $20,000 probably. William L. Belknap and C. H. Packer, formerly of Bridgeport, Conn., are the prominent men in the company. They will manufacture brass radiator valves and fittings and other small brass work. They will locate in the buildings owned by W. B. Ramsdell. Mr. Ramsdell will build a foundry in the rear, about 40 by 50 feet.

Improved Conditions.

Anderson, Ind.—A. C. Bramkamp, of Cincinnati, who brought $200,000 action for damages against the Woolley Foundry & Machine Co., of this city, last fall, which effectually called attention to the complete manner in which the nail trust was operating, received a check for $12,000 in compromise. The check was from the nail trust and Mr. Woolley.

Anderson, Ind.—It is quite probable that Col. John Hazen, of Cincinnati, and others will soon put in operation the Hazen Arrow wire nail mill at this point. The mill has been idle for over two years, the result of the nail trust, it is said, and has been under lease to the American Wire Nail Co., of this city. The American only used the Arrow mill as a warehouse. This lease expires May 15, and the understanding is that the mill may be started by some of the original owners and new stockholders who have come in since the dissolution of the trust.

Anderson, Ind.—The Wright Stove Co. has announced that the nail mill plant, recently purchased at Greenfield, was bought because of its rolling mill department, and that the entire plant will be converted to the manufacture of steel plate for shovels and the general market.

Camden, N. J.—The new life infused into the pottery industry by the Dingley bill was demonstrated by James P. Lyons, who owns and operates a large pottery at Trenton, and who took out two permits to erect buildings for a big sanitary ware pottery in South Camden. One building will be 524 by 40 feet and two stories high, and another will be 200 by 60 feet. About 150 hands will find employment in the works.

Cincinnati, Ohio.—Dietz, Schumacher & Boye, manufacturers of machine tools, will erect a commodious two-story brick building at Queen City Avenue and Buck Street. When completed the firm will occupy it as headquarters of its business, removing from the present place at the corner of Second and Plum Streets. Plans and specifications are on file at the office of the Buckeye Foundry Co., near the new site. The building will be 90 by 180 feet in size, and the firm expect to employ between 100 and 125 men when running full time.

Easton, Pa. — The Ingersoll-Sergeant Drill Co. has its entire establishment at this place, employing between 350 and 400 men, running regularly.

Florence, Ala.—The Florence Pump & Lumber Co. is introducing new lines of turned wood into its product.

Lancaster, N. Y.—The Lancaster Machine & Knife Works are so crowded with orders that new machinery is being put in and a large adidtion to the works will be built.

Lockport, N. Y.—The United Indurated Fibre Factory has resumed work in all its shops and departments, with 250 men.

Moline, Ill.—J. Fred Huntoon has agreed with the Moline Plow Co. for the sale of the Moline house property just opposite to the company's plant for $9000. At the same time J. H. Mueller has made a contract for the sale of his brick building and lot to the same company for $5500. This property will be very valuable to the company for many purposes. Mr. Allen, attorney for the company, says no deal has been made, but the company expect the deals will be completed.

New Haven, Conn.—The Belden Machine Co., which has occupied part of The Scranton & Co.'s factory in Congress Avenue, have purchased the old New Haven Nut Co. property in Westville, and have removed their plant. The Belden Co. came to this city from Danbury about eight years ago, where they had conducted a machine tool and drop forging business for about twenty years.

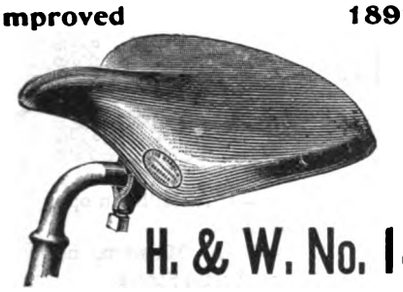
North Adams, Mass.—The directors of the Mannesmann Cycle Tube Co. and those of the Adams Water Power Co. have combined, and are organizing the Mannesmann Cycle Tube Works Co. Mr. Vaillant will be president, and Lawyer Howard Williams, of New York, treasurer. The new company is now being organized, and in the meantime the inventory is being taken. The former company took possession of the Zylonite Co.'s large plant last spring, and in preparing for work has expended over $150,000, which includes a water service by the Adams Power Co., valued at $70,000. About 600 hands is the complement.

Ottumwa, Iowa.—Petram & Hall are the manufacturers of a new carpet fastener which is attracting considerable attention.

Pottstown, Pa.—The Pottstown Iron Co.'s stockholders last week decided to increase their capital stock by over $1,000,000 cumulative stock at 7 and 5 per cent.

Seneca Falls, N. Y.—The Gleason & Bailey Mfg. Co. started in this month on full time. For a year and a half the shops have been running on short time.

Torrington, Conn.—The Union Hardware Co., which already employs several hundred people, is about to add materially to its plant by the erection of other buildings, and the moving here of another concern engaged in a similar line of industry. The addition will necessitate the employment of about 150 extra people, some of them coming with the new branch.



Troy, N.Y.—On the application of George B. Wellington, attorney for the receivers of the Walter A. Wood Mowing & Reaping Machine Co., Seymour Van Santvoord and Danforth Geer, Justice Fursman has granted an order permitting the receivers to manufacture and sell machines in the United States on a credit not to exceed nine months. The receivers are also permitted to purchase the necessary material for the manufacture of the machines.

Wheeling, W. Va.—The LaBelle Iron Co. in all probability, will build a new tin plate mill on the ground north of the present plant. The new mill will cost about $100,000, and will afford employment to fully two hundred men.

Wilkes-Barre, Pa.—It is given out on good authority that the gun factory at South Wilkes-Barre has passed into the control of Joseph Hendler and the Stegmaier family and that operations will be resumed there in a few days. The factory has been idle about two years because of dull business, but the new proprietors expect to secure one of the best gun makers in the country who will have charge of the works. Orders for 2000 guns have already been received, which will keep the factory in operation for four months, and many other orders are expected shortly.

Louisville, Ky.—The Aquila Mfg. Co., W. M. McCowan, bicycle factory, will more than double the capacity of its bicycle plant, and will erect new building for accommodating the plant.

New York, N. Y.—Miller & Schnauffer, bicycle fittings, bicycle sundries, etc., No. 101 Reade Street, have removed to larger quarters, at No. 97 Reade Street.

New York, N. Y.—The Tinkham Cycle Co. have completed arrangements for the exclusive control of the Lovell Diamond and Excel wheels, manufactured by the Lovell Arms Co., Boston, Mass.

Toll City, Ind.—John V. Ross, Hardware, sporting goods, etc., has completed and taken possession of his new store.

Wadena, Minn.—Ed. Benedict, bicycles, contemplates the erection of new building for his bicycle business.

Worcester, Mass.—Buck & Hunt, manufacturers of leather elastic bicycle belts, have dissolved partnership, and E. E. Buck will continue the business alone. He has moved to the Bowker building, at Washington Square.

Recent Embarrassments.

Chicago, Ill.— Daniels-Foot Cycle Co., manufacturers of bicycles, reported to have made an assignment.

Cleveland, Ohio.—Eberhard Cycle Co., bicycles, reported to have made an assignment.

Dayton, Ohio.—S. N. Brown Co., manufacturers of hubs, spokes and wheels, S. N. Brown, president, has filed an individual assignment. Estimated assets, $40,000; liabilities not stated. Judgments against the company on notes aggregating about $25,000 and in favor of local banks, precipitated the receivership.

Norristown, Pa.—The Long-Mead Iron Co. and the Conshohocken Tube Co., of Conshohocken, have gone into the hands of receivers. The liabilities will amount to about $300,000. The assets will not be over $150,000.

Bells.

The belle of the ball on her escort leaned,
And so very happy the dear girl seemed,
That he took her aside to a cozy retreat
And told her the story that's always so sweet.

She perked up her lips, so enticing and fair,
And his own were reaching the heaven that's there,
When she said, "Dear boy, this is only a sell.
You'll first have to buy me that 'Climax' bell."

The new 1897 model "CLIMAX" Bell possesses without doubt the most improved Lock Clamp known. Can be adjusted to the Handle Bar quickly without removing the screw, thus saving all vexatious worriment in the operation, and at the same time presents a more attractive appearance than any other kind of an attachment.

We have just published a handsome little booklet to be carried in the vest pocket, containing lots of valuable information for the benefit of wheelmen. Send us a two-cent stamp and we will mail you a copy.

CRONK'S
Combination Fencing Plier.

This newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same heft as the 1½ Maydole Hammer, and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12.00. Dis. . . .

To Bicycle Riders.

WE MAKE OUR TUBE OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted] and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

For sale by the wholesale Hardware trade.

"Bright and Newsy."

Biddle Hardware Co., Philadelphia, Pa. [*General Hardware and Bicycles*]: In season and out, we have claimed that the Hardware trade was the proper medium for the disposal of bicycles and bicycle sundries throughout the country, and our opinion on this point is so well known, that it does not seem as if we could strengthen it materially by saying it again. Of course large cities may be able to support a few exclusive bicycle men, but in the majority of towns and cities throughout the country the man must have other business in order to make it pay. We appreciate the fact that from the first HARDWARE has held the same views, and we think they have been fully justified by the trend of events. HARDWARE is always welcome in our office, and its bright and newsy columns are often a relief amid the cares of business.

Digitized by Google

IN THE CONSTRUCTION

of hose the same two materials are always used—cotton and rubber. But the proportions vary—in rubber hose the rubber costs several times as much as the cotton; in cotton hose the cost of the two is about equal. Now the office of cotton is to give strength; that of rubber (in addition to forming the water way), to cover and protect the cotton from injury. It follows that, as cotton hose contains less rubber, while it is as strong it is not so long lived as rubber hose. That's the disadvantage; the advantages are that it costs less and is easier to handle. We carry two brands of cotton garden hose: **DOUBLE DIAMOND** is exceedingly strong; it has frequently been tested to 500 pounds pressure, and will stand the service of any water works. **SPIDER** is a lighter hose, but thoroughly well made, and will give fine service under all ordinary pressures. Send for samples, prices and booklet. If you prefer rubber hose, remember we have eight brands to choose from.

A MODEL CAN OF VARNISH.

The handsomest and most attractive can of varnish ever put on the market is being sold by the Glidden Varnish Co., of Cleveland, Ohio, who are one of the most enterprising and progressive varnish manufacturers in the country and the first varnish house to offer a high grade of varnish at an advertised low price, to be sold only in sealed cans, protecting the painter so that he may know that he is getting a standard grade of varnish, and just what it is going to cost him.

These varnishes are called M. P. Special Coach Varnish and M. P. Special Spar Varnish. The former is to be used on interior work and the latter on exterior work. The advantage of using both of these varnishes is that they can be left in the gloss finish or rubbed with either water or oil and pumice stone, giving much better results than the old-fashioned hard oil finish, as they produce a very elastic and durable finish and will not bloom. Both of these varnishes are put up in handsome cans with the label lithographed on the tin so that they cannot rust out or peel off, thus giving the dealer a can of varnish that will always look bright and nice, as the label can be washed off with soap and water and not be injured. These cans are also equipped with the new fulcrum cap and nozzle with inner seal, so that when the seal is broken the can has an air-tight cap, thus keeping the varnish in good condition and preventing evaporation.

Dealers should lose no time in putting in a stock of these varnishes, as they will sell on sight and they offer a liberal discount to the dealers, as they want them to act as distributing agents for both these specialties. The retail prices are as follows: M. P. Special Coach Varnish, in five-gallon cans, $1.25 per gal.; in one-gallon cans, $1.40 per gal. M. P. Special Spar Varnish, in one-gallon cans, $3.50 per gal.; in half-gallon cans, $1.90 each; in quart cans, $.95 each; in pint cans, $.50 each.

THE CLIPPER OUR IMPROVED LAWN MOWER.

Light, more **durable and less liable** to get out of order than those now in general use. Nothing escapes the grasp of the Pioneer, weeds, dandelions and plantains being cut as closely and evenly as grass. Only requires the same power to cut grass two feet high as it would to cut two inches, and cuts more closely in the mowing of irregular surfaces and spaces, such as between posts of fences, walks and shrubbery. The Clipper Mower is not analogous to other lawn mowers, as it does not roll down the grass preparatory to cutting it; the finger bars and fingers thereon of the mower, gather in the grass in nearly an upright position, and the vibration or reciprocating motion of the knives shears off the grass with uniformity. **There is no use for sickle or shears where the Clipper is used.** For descriptive Circulars and Prices address the makers.

HARDWARE

VOL. XV. MAY 25, 1897. NO. 4.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: CHICAGO, - - - - - ASHLAND BLOCK.
BOSTON, - - No. 33 EQUITABLE BUILDING.
CINCINNATI, - - - No. 316 VINE STREET.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

While business continues on about the same lines of improvement that have characterized it for some time, it presents no features of great encouragement as to large sales.

Low prices, limited demand, and a moderate pressure to make sales have all had their due effect, and a longer season than usual of summer dulness is likely to be the result.

It would be a matter of little surprise if many factories closed down earlier than usual for the customary mid-summer clearing up and inspection of plant, with the determination to discount too largely the possibilities of a good fall trade and fail to prepare for it.

It is needless to state that disappointment at the limited amount of positive improvement in business since the change in administration, is entirely too prevalent. Too much was expected by our manufacturing interests, and the apathy shown in Washington by our representatives with reference to any commercial progress, has resulted in large vested interests being compelled to stand idly by, waiting for some evidence of the wisdom we are taught to look for in our national councils, but only to find that the selfish demands of trading politicians are blocking the way to a nation's prosperity. The tariff schedules which were "to be settled in a few weeks," have occupied the close attention of the legislators for several months without definite results, and the end of the uncertainty is not yet visible; it naturally follows that no safe speculations in reference to fall trade can be freely indulged in without a greater risk of probable loss than any one cares to entertain at the present stage of the game.

The general features of the markets are without special changes, wire and cut nails still holding their own, both as to a satisfactory demand and a price not too exorbitant. Heavy goods generally are subject to quotations favoring the buyer, especially when specifications can be placed at once, without too extended a delay in delivery. The floods in the South, as we learn from several reports, while diminishing sales through the sections of the country affected by them, have not made the apparent results in the gross volume of business show any diminution when compared with those of a year ago. If the special session of Congress would only accomplish the purpose for which it was convened it would give us a glimpse of blue sky, with a certainty of sunshine for some time.

Senatorial Amenities.

When one of our venerable Senators refers to the speech of another as "exuberant oratory," and another reflects upon his brother Senator by saying his methods betray "a sort of colossal cheek" if "it were not the height of audacity and impudence," the Lord help the commercial interests of our patiently waiting country.

When the Senate of the United States becomes a national arena for the display of unwholesome buncombe, and the bandying about of unadulterated slang, statesmanlike endeavors on the part of a few, to serve the country's interests, might as well be buried "in the deep bosom of an ocean" of uncertainty.

When the adoption of a tariff foundation on which to ground four years at least of some kind of solid prosperity, receives such ill-advised consideration, and uncalled-for delay, the country may well stand appalled at the "audacity and impudence" displayed by the Senatorial seignors.

Why will they not understand that the commercial prosperity of the entire country is simply holding itself together waiting for a certain and confident foothold before it, before any definite steps can be taken that will ensure a future free from anxiety and discontent?

Especial attention is invited to several communications elsewhere in this issue, from gentlemen who are entirely competent to discuss intelligently, and out of their personal knowledge, the themes of which they treat. These gentlemen are among the leading Hardware manufacturers of the country, and the establishments which they represent are counted among the most extensive employers of labor to be found in any line of business. Their dissection of the illy-considered declarations of Bishop Potter are keen and clear, and the facts which they bring forward in proof of the positions they take, cannot be denied. Long years of connection with the manufacturing business in the em ployment of labor, have taught them a great many things which the clergy have not yet learned, and, while they discuss the various questions in a calm and temperate tone, they have left the Bishop, and such as view the labor question from his standpoint, with nothing to stand upon. It is with pleasure that *Hardware* adds this contribution to the current discussion of one of the great questions of the day.

Publicity Pictures.*

BY NATH'L C. FOWLER, JR., DOCTOR OF PUBLICITY.

This is the age of pictures.

Ninety per cent. of all advertising is from twenty-five to fifty per cent. illustrated.

Modern progression and common sense suggest an appeal to the eye and the mind collectively.

The eye sees a picture.

The mind reads the text.

The reader absorbs a part of the illustrated advertisement unconsciously, and without effort.

He cannot appreciate or digest the text of an advertisement without some mental exertion.

The advertisement of both picture and text reaches everybody who sees it.

The advertisement of text only reaches only those who read it.

It is obvious that the illustrated advertisement, if it is properly illustrated, is more effective and better than the advertisement of text only.

The advertisement poorly illustrated defeats itself, and does harm to the advertiser.

No illustration should ever be made unless it illustrates something.

The technical picture should never appear in the untechnical advertisement, nor should it ever be put before the public at large.

The picture must be adapted to the seer of it, not to the maker of the article it illustrates.

The picture of a shoe tells the shoe-seller what it is, but unless it be well printed in the newspaper, and of large size, it does not show the value of the shoe to the shoe-wearer.

The picture of a furnace stands for all furnaces to the furnace user.

The technical picture should be in the catalogue, if the catalogue goes to the trade, but if it does not go to the trade the picture should be not more than half-technical, and must be generally illustrative.

A good head-line, if in large type and of great brevity, is really an illustration, and many advertisers prefer it to a picture, because the right kind of a head-line is not misleading, and is instantly absorbed by the reader, while a picture, and even a good one, may illustrate something which the advertiser does not care to bring out prominently. The public can sometimes misunderstand a picture, but it is not likely to misunderstand a brief head-line or short text.

It would seem that the Golden Rule of advertising is to use illustrations only when they illustrate, and to use strong head-lines, with or without illustrations, and to use illustrations a part of the time, and large type head-lines the rest of the time.

New England Dinner.

The regular monthly meeting of the New England Hardware Dealers' Association was held at the United States Hotel, Boston, on Wednesday evening, May 12th. After the meeting of the executive committee, dinner was served. Covers were laid for seventy, which shows the good feeling among the Hardware dealers of New England. The dinner was enlivened by music from Gerrish's Mandolin, Harp and Guitar Club. They received many encores for the many choice selections of music. After the dinner the business meeting was opened. The principal topic was the time and place for the June meeting. It was voted that a committee of three be appointed to select some place at the seashore for an outing, and that the ladies be invited. Much regret was expressed that the president was detained by sickness.

The Fire Ball Cycle Lamp.

The Cycle Danger Signal Co., No. 107 Chambers Street, New York, are placing upon the market the present season a new bicycle lamp, which, from its shape and great radiation of illumination, has been denominated by the manufacturers "The Fire Ball." It possesses an originality in points of construction that makes its appearance unique among the numerous bicycle lanterns already before the trade.

It is simplicity itself, apparently nothing to get out of order; no reflector necessary; no lens or oil well to be looked after, the lamp being virtually in one piece.

It is highly polished and nickel-plated, has a large white jewel in front, a smaller red one in the rear, and small green ones on either side, so that it can be seen from every direction; it will hold a sufficient quantity of signal or other oil having a medium body, to last ten hours, and cannot readily be blown out. The light from The Fire Ball is so concentrated, that while it is visible a great distance, it lights up the path sufficiently without any great glare on the road. It can be fastened on either the front or rear forks of the wheel, and is sold at the popular price of $2.00 each.

Being a Bishop.

Editor Hardware: This discussion of Bishop Potter and the laboring men, reminds me of one or two things.

An Irishman was toiling, bareheaded, at a windlass, under the scorching sun. A Catholic father rode by and said to him:

"Put on your hat, Patrick. You'll bake your brains in this sun."

The worker looked up at him, and said: "Do you think I would be doing this for a dollar and a half a day, *if I had any brains?*"

Two other Irishmen were delving in a ditch. Said Murphy, "Terence, if you had yez choice in this sinful world, what would yez be?"

Terence mopped his brow, and considered. "Well, for a nice, clane, well-paid, azy job, *I'd be a bishop.*"

Perhaps some of the workingmen of whom he speaks, would trade jobs with my esteemed friend Potter.

A. N. OLDMAN.

Elected to the Club.

At a meeting of the board of governors of the Hardware Club of New York, held on May 13th, the following gentlemen were unanimously elected to membership in the Club:

Madison B. Hawke, No. 261 Broadway.

Stetson Leach, No. 218 Broadway.

Chester R. Hoag, Whitehead & Hoag Co., Newark, N. J.

Albert L. Suesman, Postal Telegraph Building.

C. C. Miller, Peerless Rubber Mfg. Co., No. 16 Warren Street.

Charles H. MacDonald, Dennison Mfg. Co., No. 198 Broadway.

The Boston *Herald* thinks that a mosquito would make a good advertiser because it is not satisfied with one insertion. A friend suggests that it would make a better collector, because it presents its bill before doing the job. Now let others tell what the mosquito is good for.—*Exchange.*

He would please a saloon-keeper, being always willing to get full.

Peter McCartee, president of the Hardware Club of New York, and vice-president of the Stanley Works, was confined to his home in Brooklyn for a number of days, with an attack of lumbago. The club rooms seemed lonesome about the noon hour, without Mr. McCartee's presence.

MANUFACTURERS ANSWER THE BISHOP.

At the annual supper of "The Church Association for the Advancement of the Interests of Labor," given recently at No. 23 St. Mark's Place, New York, Bishop Potter said among other things: "The great causes of the general ill-feeling and uneasiness among the laboring classes in the United States to-day may be divided into two classes—machinery and the manner in which the capitalist looks down upon the men who labor for him. Chief of these two is machinery. It is doing away with intelligence in labor. It is turning the laboring man into a simple idiot. Not long ago I visited a large factory in this State and was much impressed with what I saw. The owner proudly showed me around pointing out the manner in which labor was simplified. I saw a young man sitting before some sort of a large hammer. He sat with his legs crossed and all his work consisted in shoving into an opening in the machinery a small piece of iron. He would turn the metal two or three times, throw it into a large box, and take another piece. That was this man's work day after day, week after week. No wonder that at night-time he drank, gambled, and fought. He had to; otherwise he would go mad. How many of us would stand this and not cry out? Not one of us but would become a striker. Myself among the first.

"The master of to-day looks down upon his men. He treats them as though they had no souls. They never get a chance to rise. Daily they drift further apart. In former days the owner of a large establishment took an interest in his servants. He knew every one by name, and promoted and helped them. To-day nothing like that exists. Few owners know any of their employees even by sight. Employers are constantly on the lookout for new inventions which will save money and throw out of work as many men as possible. The laboring men must be looked after if trouble is to be averted. They must make the capitalist respect their rights. Let them stand on their feet and use their voices.

"This association is looked upon as a dangerous and revolutionary one, because it tends to unite the Church with the laboring man in his great struggle. Say what they will against it, but I for one announce that from to-day on the Church of God is with the laborer."

Col. Albert A Pope, President Pope Mfg. Co.

Editor Hardware: My attention has just been called to the following extract from a speech recently delivered by Bishop Potter before the Church Association for the Advancement of the Interests of Labor:

"I saw a young man sitting before some sort of a large hammer. He sat with his legs crossed, and all his work consisted in shoving into an opening in the machinery a small piece of iron. He would turn the metal two or three times, throw it into a large box, and take another piece. That was this man's work day after day, week after week. No wonder that at night-time he drank, gambled, and fought. He had to; otherwise he would go mad. How many of us would stand this and not cry out? Not one of us but would become a striker. Myself among the first."

If his words are correctly quoted, instead of helping the laboring man, the Bishop is, in my judgment, doing a great harm by widening the breach between labor and capital. The fact that the Bishop could not do this same work without complaining and crying out, is not a logical reason for the young man's striking. He probably did this work because he could earn more than at anything else. The drudgery must be done, and the lowest order of workmen are, quite naturally, obliged to do the most menial work. Oftentimes men of education do work as monotonous and hum-drum as the daily labor of this young man who tended the piece of machinery. The ledger clerk does nothing but post figures from one book to another, and then compute them. It is the same process day after day, month after month. Many things which successful men could not undertake without protest, are willingly done by those whose condition in life has limited their sphere of usefulness.

This young man who tended the machine is not obliged to stay there all his life; if he has the right kind of fibre in his make-up, he can develop and rise to better and larger things. It not infrequently happens that the man who has gone through a period of monotonous work in the beginning of his career, ends by becoming the head of the great establishment. I may be pardoned, perhaps, for saying that as a boy I, myself, worked under the sidewalk in a dark hole stirring up barrels of varnish. It was monotonous and exceedingly tiresome, but I took it as a part of my early work, and I do not know that any harm has ever come from it.

It is too broad a statement to assert that "the master of to-day looks down on his men." That may be true in some cases, but the condition of the working classes is better now than ever before. Many of them own homes of their own. I have the highest respect for Bishop Potter in his endeavor to assist the laborers, and I, myself, have a sincere desire to benefit and elevate those who earn their daily bread by the sweat of the brow.

Before the good Bishop continues to talk in this strain, I wish he would pay a visit to our factories, and see the manner in which we care for the men there. Everyone in our employ has an opportunity to advance; he is encouraged to learn, and there are but few among the 3000 employes who do the monotonous work to which the Bishop refers. We try to make thinkers of our men, and thus raise the standard as high as possible. We cannot, it is true, do away with routine work entirely, and the best means it can serve is as a stepping stone for something higher. For some of our monotonous work skilled men are required; especially is this true in the various inspections which the bicycle receives during its process of construction and after it has been assembled into a complete machine. We could not afford to do without these inspections and run the risk of selling to our customers an imperfect machine, nor would the public be satisfied with that way of doing business.

It used to be inferred that the multiplication of inventions and the perfection of machinery lessened the number of employees, but experience shows that the greater the number of inventions, the higher is the rate of wages and the larger number of men employed. Does not the Bishop know that in the factories where there is the most machinery, there the wages are highest? Does he take into consideration the fact that in the old countries of Europe, where there is little or no machinery, and where most of the work is done by hand, the condition of the working man is far worse than in the countries where there is modern machinery?

It may be that Bishop Potter, like many highly educated and cultured gentlemen, fails to see and properly analyze the practical side of business life. I do not for a

Digitized by Google

moment question his motive. He is anxious, as many others are, to raise the standard of the working men, to make them more contented and better citizens, and for this no one is more desirous than the writer of this criticism.

Boston, May 15, 1897. ALBERT A. POPE.

E. B. Pike, President Pike Mfg. Co.

To the Editor of Hardware: Referring to the position taken by Bishop Potter, in his speech at the annual supper of the Church Association for the Advancement of the Interests of Labor, I beg to say that from my experience as a manufacturer and employer, and my acquaintance with other manufacturers, I am sure the worthy Bishop is very greatly mistaken. I do not understand why the clergy of the country so almost universally misunderstand the feeling that exists among the general line of employers towards the employes. Almost all the men whom I have known, who have been at the head of large establishments, have studied the welfare and best interests of their employes; in fact, have regarded their interests more carefully than the employes have themselves. They put much thought and expense into arranging the factories, tenements, and houses so they will be clean and in good sanitary condition. They try to induce the men in their employ to save some portion of their earnings against a time of need, and many concerns arrange so that their employes can be taken care of when sick, either at a hospital or at home, and quite a good many have an insurance whereby the workmen can draw a certain amount of money during sickness. Very few employers will discharge their men who have families, when so doing would cause them distress, but rather will bear with them, often beyond the point where patience is a virtue, while a majority of the employes will leave an employer without giving any notice or taking into account how much inconvenience or trouble their action will cause.

A very large proportion of the heads of establishments have risen from the ranks of workmen, where they have had all the experience and know all the hardships. Almost every manufacturing establishment is arranged for the best light, air, and comfort that can be had with the accomplishment of the work to be done there. In the manufacture of iron there must be heat, noise and dust, but I doubt not that the young man whom the worthy Bishop speaks of "sitting before a large hammer, with his legs crossed, simply shoving into an opening in the machine a small piece of iron" was a skilled workman who had to use careful judgment in handling the iron and who received liberal pay, and he undoubtedly would have found it harder task to have spent two hours studying in the Bishop's library than to spend a week at his own work.

I will give you a little idea of how our company treats its employes, and I know that there are many other firms who are more liberal, as they have larger plants and are doing a larger business. If any of our men or their families are sick, we see that they are comfortably cared for, and have medical attendance until they are well. We never discharge a man with a family without giving him fair notice, and then we try to arrange it so it will be a good time for him to get employment elsewhere. Our tenements are kept clean, in good sanitary condition, with running water, and we have them thoroughly repaired twice a year. Our company supports religious services at our warehouse every Sunday afternoon and Wednesday evening. We make a present of five dollars to every new baby, and frequently at Thanksgiving or Christmas time we present each family with a turkey, and at Christmas time we usually remember all the children with some practical gift, and it generally includes the mothers and other members of the family. We watch over the men and try and keep them from using liquor, and do what we can to encourage them to save their money and be self-respecting. We are always ready to listen to them, and when they are in trouble, try to advise and help them, and I know this is the practice of many, many, other firms.

Of course it is not possible for any man with a great number of employes and a large amount of business that is crowding him to spend much time chatting or talking with his employes, or any one else. He generally is a very busy man. However, it is these busy heads of firms that the churches look to for their support. It is men like Carnegie and Rockefeller, and so on down to the man who employs a dozen men in a small country village, who are supporting the churches, building the colleges, and are always to be found at the head and front in every matter of public interest and general good, and if the clergy would try to do more to teach the employes to love and respect their leader—their employer—and be loyal to him and his interests, they would do much more for the advancement of the interests of labor than they can possibly do by trying to create dissatisfaction and hatred, as the majority of them are doing. The chief reason is that the clergy of the country are not practical men; they are book-worms, and are dealing with theories instead of experience. During the business depression of the last few years, while there has been much suffering among the laboring classes, there has been, in my opinion, a much larger percentage of suffering and death among the business men of the country who have been carrying such tremendous loads of care and anxiety. If the employes would have more sympathy and take a greater interest in the welfare of their employer, there would seldom be any strikes or cause for any. When the church uses its influence with the employes to be loyal to the interests of the employer, to be true in their work, and teaches them that the men who are conducting business enterprises are their friends and benefactors and not their enemies, then will come about a condition of things that will advance the interests of labor and of all. E. B. PIKE.

Pike Station, N. H., May 14, '97.

Henry R. Towne, President Yale & Towne Mfg. Co.

Editor Hardware: The statement of Bishop Potter that "machinery is doing away with intelligence in labor" is not confirmed by the experience of manufacturers. On the contrary, the character of machinery used is constantly becoming more complex, requiring higher intelligence in its operation, and even where this is not true, the class of labor employed, as in the case of the simpler machine processes, is that formerly utilized for the simplest, and often the roughest, kinds of hand labor. Surely there is no degradation involved in transferring a young man from digging pipe trenches, hoeing corn or shifting freight (all of these usually entailing exposure to the weather, irregular employment and great manual effort), to a modern factory to operate a machine, even if the work requires no great intelligence, but where the workman is under good sanitary conditions, sheltered and able to have regular employment. Neither can there be injury in transferring a woman from needlework, housework, nor even from the modern store to a well-organized, modern factory, (where the surroundings are now almost always thoroughly wholesome, and often even attractive), to tend light machinery, involving usually quickness of hand, but little strain or fatigue, and where intelligence in the operator is an essential factor in the output of the machine and hence affects the value of the labor and the rate of wages it commands.

Machinery has vastly cheapened the cost of every product, and above all else has made accessible to the masses, comforts and enjoyments which formerly were the privilege of the wealthy few. Machinery, moreover, is probably the chief factor in the steady progress of the world in the direction of wholesale communism. Where formerly men

Digitized by Google

worked individually, they now work in organized bodies, with vastly increased productive power and higher average earnings. Those who have talent have larger opportunity in which to utilize it to advance themselves, while those who have lesser ability are enabled to work under better conditions and to secure better compensation than before.

Undoubtedly there still remains a vast amount of suffering in the world, but I believe that it is steadily diminishing, and that, in this country at least, it is confined chiefly to the classes who cannot find employment in occupations where machinery is largely used, as, for example, among the unskilled and ignorant masses, both male and female, in our larger cities.

Bishop Potter's argument, if sound, would imply that the farmer would be better off to revert to the scythe and abandon the mowing machine; that women should discard the sewing machine and return to the needle; and even that the stage coach is to be preferred to the railroad train. In brief, it would constitute a plea to reject the mechanical progress of the century and to retrace our steps until we had recovered the industrial conditions of a century ago. I share his regret at existing conditions which all deplore, but I dissent from his diagnosis of their cause and believe that the remedy he suggests would be far worse than the disease, and instead of curing would only intensify it.

HENRY R. TOWNE.

New York, May, 1897.

Hon. D. A. Dangler, President Dangler Stove & Mfg. Co.

Editor Hardware: My attention was recently called to an article in your valued paper, which referred to some remarks by Bishop Potter, at the annual supper of the Church Association for the Advancement of the Interests of Labor.

Among other things he states that the "causes of the general ill-feeling and uneasiness among laboring classes in the United States to-day, may be divided into two classes: machinery, and the manner in which the capitalist looks down upon the men who labor for him"; claiming that the "chief of these two is machinery," which he claims is "doing away with intelligence in labor, and is turning laboring men into simple idiots"; and then gives an example of what he had seen in a factory, in the case of a young man, with his legs crossed, and all his work consisted in shoving into the opening of the machine, a small piece of iron.

The Bishop's mind must have gone back to the period when an apprentice learned to make a tea-kettle, or a plow, or an ax, or any other piece of mechanism, from the raw material and finished it ready for the market. That period has long since passed, and instead of learning to make a tea-kettle or two, to do that same work and to find a market for it in competition with other countries, a different method had to be adopted to manufacture the article by a division of labor, passing through the hands of a number of mechanics, and in that way greatly reduced the cost as well as increased the production; and in the process of time and closer competition, it was found that some of this work could be simplified and greatly improved by machinery, and in this way the output of factories was largely increased, so that in place of reducing the number of operatives, they were steadily increased.

He also says that the "master to-day looks down upon his men; he treats them as though they had no souls, and they never get a chance to rise; daily they drift farther apart." Bishop Potter is either laboring under a misapprehension, or sadly ignorant of the facts as stated by him. As an old manufacturer, I know that as a rule, the majority of the manufacturers of this country have both souls and consciences, and are not indifferent to the rights of their employes, and know in many cases (and this is especially true during the last few years) that establishments have been run at a loss, simply to furnish employment to their men, saving them and their families from suffering. While it is true that manufacturers, as a rule, cannot personally know their employes, they do seek to find honorable, God-fearing and God-loving foremen for the heads of their different departments, and when attention is called to any grievances, they are thoroughly investigated, and in all cases justice is awarded to the right one.

It is to be deeply regretted that a man of the standing of Bishop Potter should allow himself to array labor against capital, which must necessarily lead to the most serious consequences. The fruits of such teaching have already brought many of the troubles of which he complains, upon the working classes. Such teaching, added to the walking delegates and the heads of the labor association, will do more to precipitate the very danger of which he speaks, viz: the introduction of machinery. No matter what the scale of wages that may be agreed upon between the employer and employe they rarely remain any length of time, soon become dissatisfied, feel that they must have an increase in their wages, when the condition of the trade makes it utterly impossible to conduct the business at a fair profit on the investment, and indeed often is a loss.

After an experience of an active business life of over fifty years, I am satisfied that as a rule capitalists in active business have not only souls but consciences, which direct them to do right and to be just, and that if the employes did their duty and did their work conscientiously, there would be no need of walking delegates or labor agitators; and in my judgment the greatest drawback for a revival of general prosperity, is the growing feeling of intensified hatred on the part of labor against capital. And it should be the duty of the church, and all good men, to aim to bring capital and labor together, instead of farther apart.

Cleveland, Ohio, May 15, 1897. D. A. DANGLER.

S. W. Allerton. President Allerton, Clarke Co.

Editor of Hardware: I have read Bishop Potter's address in the interest of labor. A fact is worth more than an assertion. The real question is: "Does the laboring man live better to-day than in 1840, the commencement of the era of great invention?" In my boyhood days, in 1844, it was an exception when a young man owned an overcoat, and shoes were luxuries. The poor lived on the coarsest, commonest food; wages were $9 per month on a farm for a strong, athletic young man. I think at that time the highest salary was paid by Erastus Corning to his confidential clerk, $2500; $300 per year was a large salary. Salaries and wages to-day are double what they were in 1844; the necessities of living, clothing and food, one-half. To me, the laboring man has been largely benefited by invention. I look upon the inventor as a public benefactor.

If, as a nation of free people, we are not competent to find employment for our labor, living in the richest country, in material wealth, in the world, it shows we are lacking in administering the affairs of this great nation.

A gentleman once told me that we have made too many improvements, and we have lived too fast. My reply was: "Have we too many school houses, too many houses, and too much comfort for the people of this country?" If we have, then inventions are a detriment to the American people.

I have always looked upon the man, who by industry and economy had accumulated capital and started some industry to give employment to people, as a public benefactor. We all know there has not been a boy born in the last fifty years in this country, had he started right, with self-denial, pluck and courage, economy, perseverance and morality, but could have had a competency.

Let us take a boy whose father is a railroad man, and he must commence life as a brakeman. Suppose he would resolve to save part of his wages, keep out of sa-

Digitized by Google

loons and billiard halls, would spend his idle time in reading useful books and newspapers and think for himself, "I am a brakeman, I do not like it, but I will be the best brakeman on the road," could you keep this young man down?

Up to 1893, wages were good, and every young man could have saved money.

Bishop Potter says: "Every capitalist looks down upon labor." I do not think so. I believe most of them would like to pay good wages, because they all know that well-employed and well-paid labor means prosperity in this country.

I believe it is every man and woman's duty to try and lift up every man and woman they come in contact with, to higher manhood and womanhood. How can this be done? Teach them to save their money. When a man or woman gets $100, each has a silent teacher of industry, economy, temperance and morality.

If every church would open its doors to the poor, teach them to obey the laws of the land and God's laws—His laws design every man and woman to be ambitious for gain and knowledge; teach them that God has given everybody a spirit of charity and good will as a counterbalance to some sufferings; as a nation, we must be stingy for our own nation and for ourselves, or we would degenerate. Teach them self-denial, economy, industry, temperance and morality, and how to save a portion of their earnings and how to invest them, then they would get at the practical way of lifting up the masses, and making better men and better women.

The inventor is the great promoter of human progress, giving people a greater desire to enjoy the benefits of labor. There is extreme poverty in our country, brought about by intemperance and leading a thoughtless life, never laying up anything for a rainy day, not using as much thought as a common squirrel that runs in the woods.

S. W. ALLERTON.

Chicago, May, 1897.

Thos. Coldwell, President Coldwell Lawn Mower Co

Editor Hardware: Yours of the 10th quotes Bishop Potter as saying that machinery, and the manner in which capitalists look down upon the laboring man, are the two great general causes of ill feeling and uneasiness among the laboring classes. The Bishop certainly is not complimentary to the capitalists he associates with, and I don't think the theological shop in which he has been brought up is the best school in which to learn the most practical lessons regarding capital and labor. But, possibly, the Bishop was indulging in what he thought a little harmless oratory, which he thought would be nice for the occasion; he probably thought it the proper thing at a meeting of the laboring class to berate the employer and the capitalist, and thus inflame the minds of his hearers. But did he think by so doing, he was only making the breach between capital and labor wider and wider. By such unwarranted talk the reverend gentleman is doing the workingman a positive injury, and a satisfactory arbitration was never yet brought to a successful issue based on this principle. I say it with due reverence, if Christ himself had undertaken to arbitrate between God and man on this principle, the Gospel would have been a failure. But He was wiser than some of His followers, and He taught: "First take the beam out of thine own eye."

Now, I don't want you to think for a moment that I am using my pen against labor, or even organized labor. I believe in it, when it is used for legitimate purposes. For instance, take the Brotherhood of Locomotive Engineers, and they are a great credit to the craft, and a benefit both to themselves and their employers.

I wish to say, also, that I have spent upwards of forty years as employe and employer about manufacturing interests. It has also been my privilege to travel about the world a good deal, and I have always taken a great interest in studying the condition of the laboring classes. I merely mention these facts that you may see that I know whereof I speak, and that you may pardon my apparent egotism in my referring to personal experience.

First, the Bishop says that machinery is one of the great enemies of the workingman. I have no doubt that there are isolated cases where machinery occasionally, and for the time being, displaces labor, but it is absurd to think that this is general. Why, if we take this ground, all improvement will cease. Possibly the Bishop prefers riding on a raft, and eating meat with his fingers, as they did of yore. I like an express train with a dining car, and a good knife and fork, and I do not think the workingman has ever suffered by these inventions.

Let me give the Bishop a very practical illustration. Over thirty years ago I commenced in the lawn mower business; we made 150 mowers per year for the whole United States. The cheapest mower was $65. We employed about twelve men. Our tools and machinery were very crude, hence all the work was hard and laborious. But genius came to our aid; new inventions in lawn mowers; new tools and machinery to make them were brought out, and as these things developed, wider avenues of trade were opened. The result is that the lawn mower business now furnishes employment directly to over 2000 people, and indirectly to over 10,000. Not only has it benefited labor in this direct way, but the cost of production has been reduced to such an extent that any workingman can now afford to have a lawn and a lawn mower. I have yet to meet the first workingman who will say to me that machinery in this line has caused him any uneasiness or ill feeling, but I have seen the smile on many a hard workingman's face, as he has laid aside the old scythe and grass hook for a good lawn mower, and, as an Irishman said to me on one occasion, when his employer had bought him a new lawn mower, "Begorra, we have you to thank for the aisy times we'r having this hot weather."

The Bishop speaks of machinery making an idiot of a man. I do not find it so. We don't employ idiots to run machinery. I think if the Bishop would visit Brown & Sharpe's, of Providence, R. I., or any other first class shop, where they make tools and machinery, he would find a very intelligent class of men. Speaking from personal experience, I would rather risk becoming an idiot watching a machine ten hours a day, do ten times the work I could do by hand and do it ten times better, than I would risk becoming a slave and a beast of burden. Yes, and losing my reason too, by working as I have done from half past four in the morning until half past seven at night, and poorly paid at that. Away with such "good old times!" We prefer the present day, with its new machinery and its progress and its possibilities, and every intelligent workingman thinks the same.

The second reason that the Bishop gives as a cause for uneasiness among the working classes, is because the capitalist looks down on him This is probably an isolated case; at least it refers to a class of manufacturers that I am not familiar with. But I think it is an idea that a good, intelligent workingman would not entertain for a moment. If workingmen would only get the idea that their employer wants them just as much as they want him, it would save a lot of trouble. It stands to reason that a successful employer will always try to do that which will be for his best interests, and no one knows better than he does that the success of his business depends largely on the skill, intelligence and contentment of his employes. Hence, it is policy for a manufacturer to take an interest in his employes, and by so doing both parties are mutually benefited. In fact, the true solution of the vexed questions between capital and labor will never be arrived at until

Digitized by Google

they understand that their interests are mutual, and that the only true basis of work and wages rests upon supply, demand and merit. A skilled workman never complains that his employer looks down on him. He understands that his intelligence and skill in his craft is his capital, and in the general progress of the world, this capital is quite the equivalent of his employer's money; the employer understands this, and naturally interests himself in his employes.

When I was an employe, I always tried to make it to the interest of my employer to take an interest in me, and by doing this I did the best for myself. Since I became an employer, I have always tried to make it to the interest of my workmen to take an interest in me. The best evidence of my success is the fact that I have never had anything to do with a strike, or had any occasion for one. I have always recognized the fact that a man was none the less a man because he was a workman. I have always insisted that men's wages should be paid according to their ability, and I venture to say that I have not a man in my employ to-day, who would not, if I asked it, get up at midnight to do me a favor.

The other charges the Bishop makes against employers are too absurd for consideration. I will only say that his assertions are a libel on the intelligent manufacturers of our country, and while we might expect such talk from a ward politician or a radical labor agitator, we would hardly expect it from a Bishop.

And in conclusion I will say to the reverend gentleman, that as far as my observation goes, I find that workingmen in our country are better paid, better fed, better clothed, better educated and more independent, and respected more by their employers than in any other country on the face of the earth.

What the American workman wants to improve his condition is not speeches to inflame his mind against those with whom his best interests are identified, but he wants to be encouraged to cultivate that true American principle of making the most of himself and his surroundings. If he does this he will always be respected, and looked up to by sensible employers. He will be able to command the highest market price for his labor. There will always be a demand for him. He would become independent. He would add dignity and power to whatever craft he was connected with, because he would be building on a sure and reliable foundation, which is True Merit.

Newburgh, N. Y., May 20, 1897. THOMAS COLDWELL.

E. W. Bliss, President E. W. Bliss Co.

Editor Hardware: In reply to Bishop Potter, regarding labor saving machines—like most men of his vocation they do lots of talking, and many times make mistakes, as I think is the case in this instance. Supposing his views to be correct, how about the "cotton gin?" How about the can-making industry in this country? Only a few years ago there were as many plants for making cans as packing houses; some of the people in these places understood how to do this work, but the majority did not; machines were not properly manipulated and very little work done well. Look at it to-day! Huge concerns like Norton Bros., Chicago, employing thousands of workmen making the tin plate from which the cans are made, and so on until the cans are made, tested and put into the cars for transportation, all automatically done from the time of starting the making of the tin. No man who investigates this one industry in the United States could say, as does Bishop Potter, that it was a bad thing for help or otherwise. In fact the work is much better done, and the articles are all alike.

He says: 'I visited a large factory in this State and was much impressed with what I saw. I saw a young man sitting before some sort of a large hammer. He sat with his legs crossed, and all his work consisted in shoving into an opening in the machinery a small piece of iron, etc, etc." Looking backward, why did not this celebrated divine look up the art as it stood regarding the work produced by the "cross-legged boy?" Probably by no other means could so good an article be made, and very likely he would find this boy getting good wages "working by the piece," and a man of trade, who formerly had to spend his time in shaping to produce what this automatic machine now did, could work at something much beyond this in skill, "this thing" pushed in a round hole.

Why does a master of to-day look down upon his men? Why does automatic machinery make this difference? For no reason at all. I speak from an experience of over thirty years here in Brooklyn, employing hundreds of men skilled and otherwise. Would you make pins by hand in the method of years ago? Do the attendants of these busy automatic, beautiful machines go crazy from their occupation?

What about stenography? Do the women who get good wages and steady employment at this machine work go crazy? No; but thousands are bettered each year, and the men find employment still.

I have made automatic machinery during thirty years, and I fail to see any truth in Bishop Potter's statements. We are giving employment to just as many boys who are learning the trade; we find employment for just as large a force of men, and no matter to what extent the manufacture of automatic machinery goes, there will always be just as great a call for help in all classes, either for one thing or another. Nothing could make a person crazy sooner than to be at work constantly on something hard to produce, that could be produced in quantities by machinery and by unskilled labor. E W. BLISS.

George E. Long, Secretary Joseph Dixon Crucible Co.

Editor Hardware: Is it not almost unnecessary to pay any serious attention to the remarks of Bishop Potter on the subject of machinery and labor? Or is it because he is a bishop and eminent, that some attention must be paid, or else it will be understood that manufacturers cannot truthfully deny the worthy Bishop's statement? That the Bishop was "impressed," as he says, by his visit to a large factory there is no denying, but he was impressed very much as many a man has been who has witnessed some of Herrmann's magic, or the performance of a spiritualistic medium.

The intricate machinery in the factory was as legerdemain and a puzzle to the worthy Bishop. He simply knew that he saw a young man sitting cross legged in front of "some sort of a large hammer," and that the only work performed by this cross-legged young man "consisted in shoving into an opening in the machinery a small piece of iron." This work was so monotonons, or so easy to the young man "that at night time he drank, gambled and fought."

Now, of course, the Bishop really saw nothing of the kind, although he thinks he did. He was simply "impressed," and can no more accurately describe the operations of the machinery and men in that factory than can the inexperienced men who witness sleight-of-hand performances. Probably his statement that the young man sat cross-legged can be relied upon—he has seen young men sitting that way before, but surely that young man would not have told the Bishop that it was his habit to spend his nights drinking, gambling and fighting, and "had to, otherwise he would go mad."

Then again, the "some sort of a large hammer, into an opening of which a small piece of iron was shoved," shows how the machinery got tangled in the good Bishop's head.

It is not surprising, therefore, that the conclusions drawn by the Bishop are also sadly astray. He says:

Digitized by Google

"The master of to-day looks down upon his men. He treats them as though they had no souls. They never get a chance to rise. Daily they drift further apart. In former days the owner of a large establishment took an interest in his servants. He knew every one by name, and promoted and helped them. To-day nothing like that exists."

Now as it is better to be specific and tell what you know, let me confine myself to the ways of the Joseph Dixon Crucible Co. There is no man in the employ of the company that is looked down upon by any of the "masters." Every man is treated as a fellow man. Every man has a chance to rise, and it depends entirely upon the man himself whether he rises or not. If he is competent he will come to the top in time. If not he will remain always as he is.

There must of necessity be masters, as the Bishop terms them, as there must always be generals and captains. Someone must be at the head of each department who is competent to plan, manage and direct both machinery and men. Industrious and intelligent men—men who strive not only to do their work faithfully, but who are competent to devise and work out better methods—are the men who in time come to command their fellow workmen, such men Bishop Potter terms "masters." The name is a fitting one, for they have mastered many problems and difficulties. Nevertheless such men are workmen, and often harder workers, and under greater strain, than the men under their control and direction.

That such men came up out of the ranks is shown by the following facts in connection with the Dixon Co.:

The vice-president, general manager and treasurer came to the Dixon Co. as book-keeper thirty years ago. The secretary, upon whom many duties devolve not usually associated with the duty of a secretary, was the shorthand amanuensis of twenty years ago. The superintendent of the pencil factory department, having under his charge over five hundred men, women and children, was, thirty years ago, a youngster who stood in front of an automatic machine which shaped the cedar wood as he fed it in. The machine is doing the same work to-day, but doing it in a better way because of the improvements added by the youngster later on, when he was able to put in shape ideas that had come to his active and observing mind. The assistant superintendent was, twenty-five years ago, a youngster in the same factory, and later, assisted in making a machine that would do the work automatically that he and his fellows used to do by hand. Yet neither he nor his fellows were the losers in any way.

No new or outside man is ever given a place in the Dixon Co. if a man anywhere in the ranks can perform the duties required. Promotion has always been a rule of the company. Automatic machines are used more largely than ever. The best ones are those thought out by our own men, and built at their suggestion. The further fact that not only has the Dixon force of men largely increased, but the amount of the pay roll has been increased to a still larger percentage, shows the evolution of a higher class and better paid workmen, and that the drudgery of factory work has been placed upon the machinery so bitterly opposed by the Bishop.

The remark of the Bishop that the workmen must "stand on their feet and use their voices" if they are to make the capitalist respect their rights, is a foolish remark to say the least. The intelligent and industrious workmen of to-day, who avail themselves of the facilities at hand, will be masters of the future. The workmen who are so unfortunate as to possess little intelligence and no industry, are to be pitied, but no "capitalist" or employer should be blamed for severing relations with such men. It is usually such men who "stand on their feet and use their voices."

GEO. E. LONG.

Jersey City, May 20, 1897.

C E. Jennings, of C. E. Jennings & Co.

To the Editor of Hardware: I have read the Bishop's speech, delivered before the Church Association in the Advancement of the Interests of Labor, and was much surprised to find the Bishop discussing a subject with which, evidently, he is not at all familiar.

The Bishop said "The causes of the general ill-feeling among the laboring classes in the United States to-day may be divided into two classes: Machinery, and the manner in which the capitalist looks down upon the men who labor for him. Chief of these two is machinery. It is doing away with intelligence in labor. It is turning the laboring man into a simple idiot."

If machinery is turning the laboring man into an idiot, how can the Bishop account for it that with this same labor-saving machinery and improved facilities in manufacture, we are enabled to send the highest grade of tools to all countries of the world? We can only accomplish this by the superior skill and intelligence of our American mechanics. I speak from my own experience as a manufacturer of fine tools, when I say that there are no mechanics in Europe making a similar class of tools that can compete with those that we employ, in skill and general intelligence. The more complicated the machine, the more intelligence it requires to operate it.

Improved machinery, with the skilled mechanic operating it, has enabled the American manufacturer to take the first place, so far as quality and workmanship are concerned, in all countries of the world. The writer, during the past two years, has studied the markets of Europe and visited Holland, Germany, Switzerland, France, England and Scotland, to ascertain just how far the manufacturers of the old world can compete with American high grade work. The result of this investigation proved conclusively that they cannot compete on lines of tools where the highest skilled labor and intelligence are required.

The Bishop also says: "The master of to-day looks down upon his men. They never get a chance to rise. Daily they drift further apart. Few owners know any of their employes even by sight."

Does the Bishop know this to be true? If not, he should be careful in making such a sweeping statement. From my own experience, with the exception of the larger cities, where large numbers of men are employed, the reverse is true. The employer *does not* look down upon his men, and they *always* have an opportunity to rise, provided they make the most of their opportunities. The employers know many of their men by name, and, in many country towns, know all their men personally. We have men employed in our own works who have filled many honorable positions, such as members of the legislature, members of the school board, deacons in the churches, and are active, in every way, to advance the best interests of the community in which they live. Many of them own their own houses, keep a horse and carriage, do a little farming, and are much happier and better off than those engaged in other occupations. By investigating this matter, it will be found that great progress has been made in everything pertaining to the welfare of the employes. Buildings are modern in construction, well lighted and heated, and have every appliance to make them comfortable and inviting. The wages are much higher than they were in the good old times to which the Bishop refers, and living is much better and cheaper.

In conclusion the Bishop says: "They must make the capitalist respect their rights. Let them stand upon their feet and use their voices."

Such absurd talk as this would do very well for an ignorant man, but when a man of intelligence voices any such sentiment in these times of depression and discouragement, we may well pause to reflect and ask what it means. The manufacturer has endeavored, during the past four

Digitized by Google

years, to employ his help and keep the mill running, when, on many lines of manufactured goods, there was no profit. In most cases the help have recognized this and appreciated it, and the feeling is of the most friendly character.

I hope, sincerely, that the good Bishop will see the "error of his ways" and make a frank acknowledgment that he was misinformed in regard to the situation, and that he had based his remarks on theoretical and not actual knowledge of the relations between the manufacturer and the workman. C. E. JENNINGS.

New York, May 21, 1897.

Hon. Webster R. Walkley, Peck, Stow & Wilcox Co.

Editor Hardware: It may be presumption for a layman to disagree with the expressed views of a right-reverend Bishop. It is at least contrary to the teachings of his youth. Yet all men do not, perhaps cannot, see an object in the same light. Bishop Potter is reported as saying "that the great causes of the general ill feeling and uneasiness among the laboring classes in the United States to-day, may be divided into two classes. Chief of these two is machinery. It does away with intelligence in labor."

Will the Bishop tell us who produces this machinery? Is it not the brain, thought and labor of the most intelligent workingmen that have ever lived on the face of the globe? Who conceives and builds the powerful engines that drive our steamships and draw our cars? Who plans and constructs the dynamos and motors that weigh, gather up, and measure electrical currents and forces? If the machinery in use to-day almost thinks, speaks and acts, does it not reflect and express the thoughts and deeds of intelligent labor? Does the designing of monitors and torpedo boats; does the construction of massive buildings and bridges, turn laboring men into idiots? It is the intelligent labor of to-day that is revolutionizing methods of production. It is the intelligent labor that gains wealth for itself, and gives wealth and strength to our nation. In the struggle for supremacy among the nations of the earth, has not the intelligent labor of America been the great uplifting agent that has placed us in the forefront, and won for us more victories than war?

"Laboring men are not being turned into idiots." Banish such thoughts. Laboring men are growing in intelligence, increasing in wealth, broadening their views, and stand higher to-day in the social scale than at any time in our history. Some men may work automatically, as do machines, but most workingmen think. They plan and contrive more expeditious ways for producing given results. They are not without reward.

"The master of to day looks down upon his men. He treats them as though they had no souls." Who speaks thus? An observant man? Who gives expression to such thoughts? A man in touch with the laboring men? It cannot be. It is not a fact. Its denial is found in every mill that turns a spindle, and in every shop where a hammer strikes an anvil.

We do know our men by name. Our children sit by the side of their children at school; they study the same lessons and are taught by the same teacher. We place flowers on the caskets that cover their dead. They enjoy equal rights as citizens, and share in all the opportunities that surround us.

"From to-day on the Church of God is with the laborer." Who says from to-day? Why from to-day? Has not the church always been with the laborer? Did not Christ choose his first disciples from toiling men—laborers? Have they not always composed the larger part of his followers?

Labor is intelligent—labor is Christian, and Christian men respect and reverence labor everywhere. May the time soon come when the good Bishop shall select a text from Scripture, of which there are many, and choose as an appropriate theme the "Coronation of Labor."

New York, May 20, 1897. W. R. WALKLEY.

Capt. Jack Crawford, the "Poet Scout."

Editor Hardware: I hold Bishop Potter in almost reverential esteem, but as a member of organized labor, I must take exception to his broad assertion that "the master of to-day looks down upon his men." Less than a month ago I visited one of the largest factories on earth, in Hartford, Connecticut, wherein there is, I believe, more variety of machinery than in any other factory in the United States, and where, from the humblest messenger boy up to the chief superintendent, everyone of the three thousand and more employees were satisfied, contented and prosperous, and where no strike has ever taken place, and where the great head of it all meets the humblest laborer with a kindly smile and treats all with the most humane consideration, for he, himself, is self-made, the architect of his own fortune, and always ready to help those who are willing to help themselves. While there are men and corporations such as Bishop Potter describes "without souls," *there are others.* J. W. CRAWFORD.

Boston, Mass., May 15, 1897. "Capt. Jack."

A Clergyman's Mission.

One of the most prominent manufacturers of the country, whose establishment is a model of its kind, and noted for its care for employees, writes as follows in a personal note to the editor of *Hardware:* "I have always understood the mission of a clergyman to be the preaching and encouragement of peace and good will to all men, and decidedly not to encourage strife or ill feeling between or among the classes."

Warm Air Registers.

The sale of warm-air registers is certainly within the province of the enterprising Hardwareman. A first-class article in this line is being placed on the market by the Ferrosteel Co., No. 151 Water Street, Cleveland, Ohio. This company have been identified with the register business for some two years, and during that time have secured a large and very satisfactory trade. A representative of *Hardware* was permitted to look through their works some days since, and learned with pleasure that since the first of January they have operated their factory continuously, and that trade so far during this year is in excess of that of last year. The company report that prices during the past year have been ruling low, but are now very firm, with every prospect that they will so remain during the entire year. Their Blue Book, as well as sizes, are now considered by large purchasers as standard. Prominent architects throughout the country are using their special dimension sheet.

We note from inspection of the *Official Gazette* of May 4th that there was issued to the Bissell Carpet Sweeper Co. a trade mark patent covering the words "Broom-action" in connection with their carpet sweepers. For some years past this has been a prominent feature of the Bissell line of sweepers, which, however, has been greatly reinforced within the past few months by the acquisition of the "cyco" bearings to the Bissell high grade sweepers.

We have received from the American Artisan Press, Chicago, a bound copy of the Hot Water Manual, recently issued by them. It is intended as a manual for practical workers in this line of business, being prepared by Walter Jones, a British manufacturer, largely interested in heating apparatus in England, in which latitude this book is a standard volume for reference purposes.

NEW GOODS AND SPECIALTIES.

Luminous Trout and Bass Fly.

The Enterprise Mfg. Co., Akron, Ohio, are placing upon the market a new specialty in the line of their luminous baits, which have proved so immensely popular. It is called the "Luminous Trout and Bass Fly," and we illustrate the same herewith. From the number of letters for-

warded by the company testifying to the superior merits of these fishing appliances, we should judge the sale of them would be a large one. George B. Dowling, of Yonkers, N. Y., writes that with a "Luminous March Brown" fly in the Adirondacks, a friend of his "in ten casts pulled out ten trout" much to the surprise of the rest of the party, who had but ordinary luck.

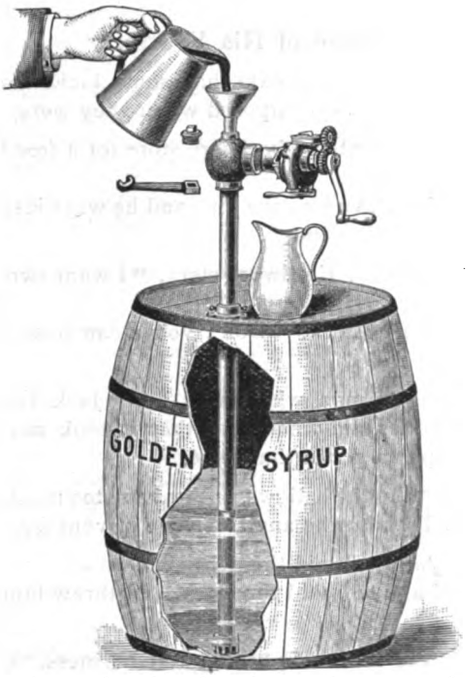
The Chase Force Pump.

The Chase Pump & Mfg. Co., Columbus, Ohio, are placing before the Hardware trade the perfect style of Double Acting Force Pumps shown by us in the illustration given in this article. This pump is distinguished from many others, by having an aluminum valve seat; a commendable feature which is popular wherever introduced. The Wind Mill Pumps manufactured by this company, have been long and favorably known by the implement trade, and add an

interesting assortment to an otherwise complete line of these indispensable appliances. Catalogues sent the trade upon request, from either the home office or the branch houses mentioned in their advertisement on page 53.

The Star Cash Register.

The Reliance Register Works, Mulberry and Chestnut Streets, Newark, N. J., are manufacturing the Star Cash Register, an illustration of which we give below, and which is placed upon the market as a register which indicates, registers and records, with the same figures. The manufacturers state "it has been their aim in the Star to produce a cash register low enough in price to place it within the reach of every retail merchant in the country, and at the same time furnish a substantial machine second to none in material and workmanship." The Star Register is so constructed that it will indicate any sum from one cent to ten dollars, at the same time leaving a record of each amount on a continuous strip of paper, which comes from a roll in the rear of the machine. "It does no adding, and for this reason the records can be depended upon as being absolutely accurate. At the close of the day's business the paper which is wound automatically upon a reel, can be removed and the different columns footed up, and the amount of the same compared with the cash in the drawer. Then by simply marking the date on the paper, a permanent record of the separate and collective amounts of each day's sales can be kept for future reference. In the operation of this cash register the setting of two levers will give



any sum up to one dollar, and with three levers any sum up to ten dollars. The amount is registered and appears in view at the window by merely pressing a plate on the front of the machine. All the parts work automatically, making its operating so simple in character as to require no preliminary practice. The works are enclosed and locked in a metal case, so that it is impossible for any one to tamper with the record. The cash drawer cannot be opened without leaving a record showing this has been done. When it is desired to open the drawer when no sale is to be recorded, the levers are pulled back to o, when the same will show and indicate the opening of the drawer at that particular time. The metal case is nicely enameled and suitably decorated, which, with nickel trimmings and being mounted on a cherry cabinet, makes a very handsome machine." The manufacturerers claim for this register the following points of popularity: "Its extremely low price. It cannot get out of order. The ease and speed with which it can be operated, as three levers take the place of a collection of keys. The wide range, of this machine making it possible to register any one of one thousand different sums. It keeps a permanent record of individual sales which cannot be otherwise than accurate. The price of register, including one-half dozen rolls of paper and ink, is $30, cash with order. Each roll of paper will record nearly 4000 sales. On account of the very low price charged for these machines they are not sent out on consignment or sold on credit or installments. Terms are the same—spot cash to everybody alike."

The National Self-Measuring Faucet Pump

The National Specialty Mfg. Co., Philadelphia, Pa.,

Digitized by Google

William H. Jacobus, branch office, No. 90 Chambers Street, New York, are manufacturing and distributing through the Hardware trade, the National Self-Measuring Faucet Pump, which possesses a number of features in its construction which make it well worthy of the notice of the dealers and commend it to the consumer as being fully up to date. We give herewith an illustration of the self-measuring faucet pump in use, the utility of which being there made self evident. To place it in position, the barrel can be placed on end wherever it is most convenient for the dealer to have it, without the necessity of using skids or truck, or in fact doing any lifting whatever. Three inches from the inside of the chime a hole is bored, 2⅛ inches in diameter, into which a flanged collar is placed and screwed to the head of the barrel; the collar is provided with set screws, the tightening of which hold the pipe and pump rigidly in position. While the suction pipe is so constructed that any make of self-measuring faucet can be used in connection therewith, it is claimed by the manufacturers that the "National" is unique in the feature which permits a one or

two gallon jug to be placed so it can be pumped directly into it, from this position. The parts liable to break from any strain put upon them, are made from malleable iron, increasing their strength while diminishing the weight. The suction pipe is made from full weight, wrought iron pipe, tinned throughout, and is intended for molasses, thick oils, varnishes and all such liquids.

A. M. Scheffey & Co., No. 92 Reade Street, New York, inform a *Hardware* representative, that the season has been one of great success for the marketing of the Wynnewood bicycles, and the various sundries which they handle. Their sales have been running very largely on the $50 wheels. They feel that they have a first-class article, and are justified in pushing it. They are also the sole United States agents of Miller's famous bicycle lamps.

Recent visitors to the Hardware Club have missed the genial presence of James D. Foot, president of the Kearney & Foot Co. This is due to the fact that Mr. Foot has sailed across the briny deep to the Old World. The report that he has gone over to inspect the military "files" of the Turkish and Grecian armies is incorrect, as it is files of another character in which Mr. Foot is most closely interested.

Samuel W. Allerton, president of the Allerton, Clarke Co., has been in New York for several days, but has again returned to his home in Chicago.

How Not to Do It.

Complain of the past, present and future of business.
Get the ill-will of your employees.
Find fault from morning to night.
Go unshaven, shabby and down-at-the-heel.
Sell goods as though doing a favor to your customers.
Keep your store dusty, dingy and dirty.
Snub the traveling salesmen.
Feel mean, act mean, be mean.
Go on the principle that there is no God in Israel.
Pattern yourself after a yeller dog.
Snarl when you cannot bite.
Never pay a bill until you have to.
When you dun a man, insult him in some way.
Kick.
Keep on kicking.
Swear and tell off-color stories before your clerks.
Pay the lowest salaries in town.
Take no vacations and give none to your help.
Confide everything to the office boy.
Run down your business rivals.
Always look on the dark side.
If your clerks are cheerful, sit down on them.
If they are blue, color them a deeper shade.
Don't keep up with the times.
Lose your hold on the trade, then make an assignment.

No Double Standards.

"Bishop Potter's comments on machinery," said George H. Sargent, of Sargent & Co., at the lunch table in the Hardware Club, "reminds me of a story once told me by Elias Howe, the inventor of the sewing machine. In those days, the cards which were used in the manufacture of cloth in the clothing mills were made by hand, and the labor was distributed among the people, payment for the same being made by piece. It was young Howe's duty every night, to perform a certain amount of this labor, which consisted in picking up the little wires and placing them in the minute holes made for the purpose, all of which was done by hand. In order to curtail his labor as much as possible, young Howe hit on the scheme of cutting several inches off of the end of the yardstick with which measurement was made. This worked liked a charm for a number of evenings, until his mother finally discovered the short measure, and she used the rest of the stick up over his shoulders. Said she to young Elias 'There cannot be two standards of measurement in this house.'"

"This is a little story," added Mr. Sargent, with a laugh, "which I used to tell to the double standard men, prior to the late election."

A meeting of the Pacific Coast Hardware & Metal Dealers' Association is to be held in Portland, Ore., on June 16th, 17th and 18th. Frank Dunham, of San Francisco, is president, and Mr. Honeyman, of Honeyman & DeHart, vice-president of the association, which includes in its membership, almost without exception, all the jobbers in Hardware and metals of every town on the coast, from Los Angeles to Seattle. The object of the meeting is to talk over the situation in regard to freight rates, Eastern competition, etc., but has nothing to do with the prices of Hardware or metal on the coast. Representatives from nearly every firm dealing in Hardware or metals on the coast are expected to be present.

Hermann Boker & Co., Nos. 101 and 103 Duane Street, New York, have been appointed as sole agents for the sale of the product of the Boston Wood Rim Co., manufacturers of the Boston Laminated Wood Bicycle Rims.

HARDWARE costs only One Dollar a year.

Digitized by Google

"Hop's" Harangues.

I was sitting on the porch of the Fort William Henry Hotel, at Lake George, several summers ago, beside an aged Israelite, who was enjoying a season of doubtless well deserved rest. In the course of some desultory remarks on "drummers," with a wish to "jolly" the old gentleman, I said:

"Do you know that in all my experience 'on the road,' throughout the country, I have invariably found the commercial travelers of your race and faith the most indefatigable, hard-working, good-natured and level-headed of salesmen; always keen of scent to make a sale and give the customer the idea he was getting a bargain? I must confess I have never failed to take advantage of any points in their methods, which I felt I could obtain by watching them closely, and I think I was the gainer by it every time I did so."

"Vell, vell!" the old man said, "it may freguently be efen as you say, but my friendt you gif the salesman aldo gedder doo much credit; it is in die nadture of his liperal surroundings dat our young men tevelope indo combanionable beople, und so make goodt sellers; they are, in trate, accustomedt to id from chilthoodt. Bud do you know der man of all whom ve venerate, respecdt und look up to in every ding? Vell, my friendt, I'll dell you, id is der buyer, und not the salesman; if the goodts are pought broperly, anypoty can sell dem; und you may nodice in going indo the sdores gontrolled by die lowest grade in our mercantile business, you will findt efen the chiltren are permiddet to sell, and dus day early learn die pargaining faguldy, to study the buyer from all sites, and adtack him on his veakest. Ven he knows und feels die cost on dose goodts he sells is really a low one, die salesman feels a sense of disgrace ven he fails to make a sale."

Remembering with painful distinctness a few contacts of my own with the commercial type so conscientiously glorified, I was fain to admit that I, upon more mature consideration, was willing to adopt his view.

In his clear cut analysis of the different characters floating about us on the porch, which ever and anon he made to me, he reminded me very much of a Jewish knit goods manufacturer I met a year or two later at a meeting of creditors in Newark, N. J.

A young man who owned enough sand lots on the seashore, and wood lots in the interior, on which to establish a "Bradstreet's rating," made up his mind to go into the bicycle business, and he did. He became a liberal purchaser from the various distributers of what was then a growing product, and as the word was passed around, "the boys" gathered within the genial precincts of his well-located establishment. While he was accepting an occasional cigar they filled him full of goods both present and prospective. The house I represented had $800 worth, more than they desired of it, when within 30 days of his opening, *mirabile dictu!* his failure was announced, for he had made an assignment.

A meeting of his creditors was held to hear what he had to propose, and we were all discussing how easy it was to "get played for a sucker," even if you were a large house doing "a business of a million."

Beside me sat a middle aged Hebrew, whose pronounced features betrayed his race without the utterance of a single sentence, and to make the proceedings less prosaic, I said to him, as though I knew him well:

"I am surprised to find you represented in this barefaced swindle, because you have always been regarded as so very conservative in the giving of credits, with a recognized desire to start light and progress slow, when there was no cash in sight."

"Oh, vell," he said, "I am in, bud not so very teep, only eighty dollars. I understandt," he said, with a wink, "dat you are schtuck for $800. Ven my salesman sendt in die order for my goodts it vas for $600 vorth, and I saidt, holy Moses, der man vas grazy! Six hundred dollars vorth of schweaters for Newark? He can'dt sell them in dree seasons; dat salesman has no sense, and the buyer must be eider a vool or a fraudt. We will led dat order lay und soak for avile; bud ven die man kepdt wriding efery otter day, 'why don't you sendt me some goots on my order?' 'I am losing sales all the dime.' 'The beople are vondering vy I don't keepd schweaters when I have everyding else?' und so fort, so aldo I vas convinced die man vas crooked to buy so many goots when his pusiness vas new yet, I toldt my headt clerk to pale up a lod of dirdy samples we hadt lying in der backing room, und make ub a shipment; if die man is honest, I saidt, he vill 'fire' dem back by oxpress, *gans gleich;* if he is a fraudt he keeps dem. Vell, he kepdt dem, und dot pill of $80, vich was at a dird brofit, vas all dat he efer got from me. Don'd you vish you had done die same?" Admiring the characteristics underlying the transaction, I must say I answered in the affirmative.

Some of His Worst.

The office boy of HARDWARE has some lucid moments, but the following were composed when they were absent:

The tramp went into a Hardware store for a free bit and brace.

The office dog gave him the one, and he went into neighboring saloon for the other.

Said the girl to the Hardware clerk, "I want two feet of hose."

Said the smart Aleck, "Don't you mean hose for two feet?"

The bewildered man who asked for "Jack Potts' sad irons," was sadder still when told that it took more than one Jack to open a pot in that store.

Said the anvil to the bellows, "You have too much *wind*."

Said the bellows to the anvil, "None of your *irony*."

"I want a *pull*-ey," said the politician.

"You need a *push*," said the clerk, and threw him out of doors.

"When I was in the lightning rod business," said the drummer, in a reminiscent mood, "I ——"

But the smoking room had suddenly emptied, and he was an outcast among the traveling men thereafter.

A half dozen men were in Junk's store, talking of the past. Said one, "There are things in every man's life that he would have blotted out. Now I was once a map peddler."

The others moved away a little.

Said another, "I was in the real estate business in Kansas City for two years."

The crowd looked scared, and felt for their watches.

"I solicited life insurance," said another. A weary look came over their faces.

"And I," said the man in the corner, with a bowed head, "was a member of the New Jersey legislature."

There was a wild rush for the door.

A Business Opportunity.

To an enterprising young man of good capacity, and possessing sufficient capital to ensure success, we know of a fine opening in one of the most flourishing cities in New England, possessing a trading population tributary to it of 75,000 inhabitants. A new block in course of erection, with all modern improvements, will be ready for occupancy on July 1st, one store of which is reserved for a Hardware business exclusively. This might prove the chance of a lifetime. Those interested, address "New England," P.O. Box 618, New York City, N. Y.

SOUTHERN HARDWARE JOBBERS.

The representatives of the Hardware interests, who met with the Southern Hardware Jobbers' Association, in Savannah, Ga., on May 12th, 13th and 14th, enjoyed an occasion of unusual pleasure and exceptional value. The business sessions were well attended, and all who were present, either as members or guests, expressed themselves highly gratified with their treatment. Among the well-known Southern houses which were represented, the following may be mentioned:

D. G. Fones, Fones' Bros. Hardware Co.
Samuel B. Hubbard, Jr., Frank S. Gray, the S. B. Hubbard Co.
W. A. Parker, Beck & Gregg Hardware Co.
Jno. S. Clark, Clark Hardware Co.
Geo. E. King and W. E. Newill, King Hardware Co.
Harvey S. Anderson, Lowry Hardware Co.
W. Stone, F. I. Stone & Co.
A. B. Palmer, Palmer Hardware Co.
F. E. Smith, Melton Hardware Co.
E. W. Clarke, E. C. Atkins & Co. and Magill Hardware Co.
Bruce Keener, C. M. McClung & Co.
Fred. Orgill, Orgill Bros. & Co.
A. P. Duncan, McLendon, Duncan & Co.
R. E. Bell.
J. C. Sproull, Anniston Hardware Co.
J. D. Moore, Moore & Handley Hardware Co.
G. R. Vaughan, Barney-Cavanagh Hardware Co.
C. A. Cunningham, Cunningham Hardware Co.
G. W. Barnett, Teague, Barnett & Co.
Wm. M. Teague, Jr., Teague & Sons.
J. W. Tullis, Jr., Tullis Hardware Co.
John Donnan, W. S. Donnan & Co.
W. S. Robertson, Watkins-Cottrell Hardware Co.
J. R. Tobias, Marshall Wescoat & Co.

The meetings were held at the De Soto. The first gathering was called to order at nine o'clock on Wednesday morning, with the president, W. E. Newell, of the King Hardware Co., Atlanta, Ga., in the chair. C. B. Carter, the secretary-treasurer of the association was present, serving in his official capacity.

PRESIDENT NEWELL'S ADDRESS.

In opening the exercises, Mr. Newell made a brief but pertinent address, in which he said:

It gives us pleasure to be present in Savannah on the occasion of the seventh annual convention of the Southern Hardware Jobbers' Association. During the history of our association, unlike most associations, we have thought it the part of wisdom to avoid combinations as to prices, and the main effort of the association has been the improvement of the standard of business of the Hardware jobber of the South in relation to his fellow jobbers, the manufacturers and our patrons. We place the patrons last because it is generally conceded that all ambitious mercantile establishments are more interested in the welfare of their customers than they are in their own welfare. If there be any doubt on this question it can readily be decided by putting the question to the Hardware jobbers present in the form of a vote. Hence our relations with our customers are as close as we could expect them to be. Our association has resulted in material benefit to each of these three classes. We have learned to have a wholesome respect for each other. Most manufacturers, we think, now realize that the jobbers are their best friends, and our customers have been getting their goods at extremely low prices, and we steadily encourage the manufacture and sale of high grade goods. Our traveling salesmen, who may be called the medium through which our wares are distributed, have been taken into closer relations to the various houses they represent, thus benefiting them and we think, benefiting ourselves.

It is not to be expected that any association can remove all difficulties attendant on active business. The commercial world is at present in such a state of health that it has required, and will require, the soundest judgment of her votaries to prevent serious shocks. Carrying the matter a little further, and yet bringing it closer home to each one of us present, permit me to say, gentlemen, that the United States has to-day as great need of able statesmen as at any time during her history. When you stop the normal flow of commerce you impede the very life blood of the nation. It is the duty of each commercial association and each individual worker, whether a member of any association or not, to use his utmost endeavors to promulgate sound business maxims and himself to follow them. We trust that in our meetings we shall sink out of sight any spirit which does not as its prime object seek to promote the general welfare of the commercial world. In many things our association is like a balance wheel to keep everything running steadily, but effective work depends on each line of shafting, each pulley, each machine. Often it appears that everything might run without it, but at that very moment it is exerting a strong, steady, powerful influence for good.

At the conclusion of this address, which was received with marks of favor, an executive session was held. Letters were read from manufacturers who were unable to be present, who expressed their regret to that effect.

In the afternoon, a paper was read by John Donnan, of W. S. Donnan & Co., on the subject of whether salesmen should be given the flat or the true cost of goods. Another paper upon the same subject was also read by R. E. Bell, of Weatherford, Texas, and still another read by W. A. Parker, the same having been prepared by W. M. Cromley, of the Beck & Gregg Hardware Co., of Atlanta. An animated discussion on these papers ensued.

THE COST OF BUSINESS.

An able paper on the subject "What Constitutes the Cost of Doing Business?" was read by James D. Moore, of the Moore & Handley Hardware Co., of Birmingham, Ala. Mr. Moore commenced by showing that business methods of to-day are quite different from those of fifty years ago, and that the introduction of railroads and telegraph lines has wrought a wonderful change in methods of transportation, and a marvellous improvement in the interchange of communications between the most distant portions of the world. Continuing he said: Commerce has been revolutionized. The merchant and manufacturer of to-day have the opportunity of extending their trade to an extent only limited by their power to produce, and their ability to determine the needs of customers. Commerce is always conservative, and has its basis in knowledge, and hence it is highly important that we should acquaint ourselves with all of the details of our business and not be groping along in the dark without any knowledge of where we will land, awaiting the inventory and balance sheet at the end of the year to ascertain whether we have made or lost.

Mr. Moore then devoted his attention to the remedies for existing evils. Competition, he said, is growing much fiercer, and the percentage of profits in proportion to the gross sales must now be larger than formerly, in order to take care of the expense account. But, he added, unfortunately the percentage of profits to the gross sales

Digitized by Google

seems to be growing less. This must be remedied. The question now is how to do it. One way is to cut down our expenses, which most every one will find difficult to do; another is to increase the percentage of profits on our gross sales, which we may do by concert of action; but it will require concert of action, which, from the very nature of the case, is very difficult to obtain, but it must be obtained in some way, and if we cannot devise methods possibly our successors will, and it must be a humiliating confession to think we have not the ability to accomplish this end. My idea is that one of the most successful methods of bringing this about is for all to look closely into the question of what constitutes the true cost of doing business.

Mr. Moore then took up the question of costs in detail. He paid special attention to the expense account. After treating of the various causes of failure, he made a telling point in his discussion of the failure of combinations, concerning which he said:

Other methods have been tried to correct this evil of cutting prices—viz., by having a common agreement as to what price we should make on certain goods in a specified territory. This, so far as I know, has always resulted in comparative failure, and I believe will continue to do so, for where it is necessary to make an agreement with more than two or three parties as to the maintenance of prices, such an agreement is pretty sure to be a failure. It is true that Mr. Scovil has succeeded in holding the trade to a uniform price for a period of about three years, but this is accounted for from the fact that he has no one to consult, and is the only manufacturer of his goods in the world. This cannot be said of any other line with which I am acquainted. It is true that there are very few makers of steel sledges and goods of that kind in the country, and yet there are too many of them to be able to formulate a working agreement and keep it up for any length of time without violations occurring.

The Nail Association is another notable example. There were too many of them, And it can hardly be said that they controlled the prices to all buyers for any one month at a time during the existence of the association, and finally it went to pieces. So with the billet pool, the rail pool, the machine and carriage bolt pool, and last, but not least, in the territory which we are considering, the Steel Plow Blade Association. All of these associations eventually break up with bitter jealousies among the members who once endeavored to work together, resulting in very much lower prices than before the agreement was inaugurated, bringing about demoralization generally.

Now, if this thing be true with manufacturers, who are much fewer than jobbers, then how much more difficult, considering the large number, would it be for jobbers to formulate and maintain a working agreement. Some other method must be found to remedy these evils than that of formulating prices at which we must all sell.

The only kind of combination that will ever succeed will be a combination that can reduce expenses and cheapen the prices below the reach of all competition, upon the same ideas as the Standard Oil Company have always worked. But this has always been foreign to the idea of all combinations; they immediately get avaricious and put up prices unreasonably high, encouraging rascality and the building of more factories, of which we already have too many. However, I am persuaded that if we could be led to see the true cost of doing business, and that the products of iron and steel are declining in value, as they have been doing for a period of years, so that it requires our selling more of them to reach the same amount in dollars and cents, it would necessarily require a better percentage of gain on our gross sales than in former years, because our expenses have not lessened. Railroad fares, hotel bills and salaries of traveling men have not declined in the same proportion as the wares we are selling.

Indiscreet salesmen, profits, special buying facilities, the quality of goods sold and the value of reputation were ably discussed. In conclusion he said: When we think of cutlery, what names come into our mind as a synonym?—Joseph Rodgers and Wostenholm; when we think of shovels, Ames; of hoes, D. & H. Scovil; of pistols, Smith & Wesson—and all through the line where the manufacturer has made a reputation of which he is proud, it has been upon the question of quality and not upon a question of price, and if we can educate our salesmen to talk quality, tell the people that they represent a house that desires to sell goods of merit, this will help us to establish a good reputation and correct very largely the evil of low prices, and we will learn very soon that it is not altogether the price that controls the order. You will observe that I have not confined my article strictly to the consideration of what constitutes the cost of doing business, but have entered upon an idea which I conceive has called forth the discussion of this question, and that is, to fall upon some method that will abrogate the disastrous cutting of prices and result in a fair profit to the jobbing trade. I believe that a due consideration of this subject will more certainly lead to this end than anything else will, and therefore have labored largely to bring out the necessity of considering the true cost of doing business.

Other papers presented at the meeting of the Association were by William W. Supplee, of the Supplee Hardware Co.. of Philadelphia, upon the same subject as that treated by Mr. Moore, and one upon "What Constitutes Legitimate Territory?" by John Donnan, of Richmond.

The annual election of officers was held on Friday, and resulted in the choice of the following gentlemen to serve during the coming year:

President, G. W. Barnett, Teague, Barnett & Co., Montgomery, Ala.

First vice-president, J. J. Mandlebaum, Fones Bros. Hardware Co., Little Rock, Ark.

Second vice-president, John Donnan, W S. Donnan & Co., Richmond, Va.

Executive Committee: W. A. Parker, Beck & Gregg Hardware Co., Atlanta, Ga.; W. E. Gibbons, W.W. Woodruff & Co., Knoxville, Tenn.; J D. Moore, Moore & Handley Hardware Co., Birmingham, Ala.; A B. Palmer, Palmer Hardware Co., Savannah, Ga.

At a meeting of the executive committee, C. B. Carter was reappointed secretary-treasurer. The matter of place for next meeting was left in the hands of the committee.

On Thursday afternoon and evening the visitors were treated to an excursion to Tybee Island, where they attended a picnic given by the Chatham Artillery Co. at the Tybee Inlet Club House.

The pleasure of those who were present was greatly enhanced by the efforts of the reception committee which consisted of the following named gentlemen: Irby Bennett, Winchester Arms Co., New Haven, Conn.; Charles H. Wier, Wier & Wilson, Baltimore, Md.; George H. Harper, Clendenin Bros , Baltimore, Md.; Omer C. Meade, Millers Falls Co., New York; H. H. Beers, New York; William P. Smith, J. C. McCarty & Co , New York; H. B. Lupton, Oliver Wire Co., Pittsburg, Pa.; R. D. Carver, Cincinnati Barbed Wire Fence Co., Cincinnati, Ohio; F. H. Foreman, Consolidated Steel & Wire Co., Louisville, Ky.

Among the manufacturers who were present the following may be named: E. F. Cooper, Henry Disston & Sons, Philadelphia, Pa.; E. E. Perry, Iver Johnson's Arms & Cycle Works, Fitchburg, Mass.; T. H. Russell, J. M. Butler, Clayville, N. Y.; John R. Griffith, Germantown Tool Works, Germantown, Pa.; B. E. Willingham, Macon Agricultural Works, Macon, Ga.; W. A. Chenoweth, Fayette R. Plumb, Philadelphia, Pa.; D. P. Hale, Standard Whee

Co.; J. S. French, Peters Cartridge Co., Cincinnati, Ohio; J. M. Christy, Washburn & Moen Mfg. Co., Worcester, Mass.; G. A. Seaver, John Russell Cutlery Co., Turners Falls, Mass.; Newton Kelsay, Newton Kelsay, Evansville, Ind.; C. A. Conklin, C. A. Conklin Mfg. Co, Atlanta, Ga.; H. P. Dawes, Lalance & Grosjean Mfg. Co., New York; Hugh McCaffrey, McCaffrey File Co., Philadelphia; Stacy B. Bispham, Russell & Erwin Mfg. Co., New York; J. M. Hottel, G. & H. Barnett, Philadelphia; H. E. Cooper, Nicholson File Co., Providence, R. I.; J. C. Schmidt, John C. Schmidt Co., York, Pa.; Frank Lohoff, Schulte, Lohoff Co., Evansville, Ind.; Carl T. McKinney, Stanley Works, New Britain, Conn.; Frank Guildner, Sargent & Co., New York.

The Perry Pneumatic Bicycle Saddle.

The Harris Toy Co., Toledo, Ohio, Allerton, Clarke Co., agents, No. 97 Chambers and No. 79 Reade Street, New York, are placing upon the market through the Hardware trade handling bicycles, and the dealers in bicycle sundries, the Perry Pneumatic Bicycle Saddle, "1897 model," which is claimed by the manufacturers to "supply that de-

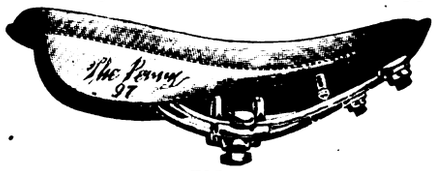

FIG 1.

mand for a saddle which, while furnishing at all times a firm, substantial seat, does not possess spring enough in its construction to interfere with the proper foothold upon the pedals which every rider deems essential to graceful wheeling."

We give in the course of this article illustrations of the prominent features that tend to make this saddle popular. Fig. 1 shows the saddle as it appears on the wheel. In Fig. 2, is shown the under side of the steel base plate, while in Fig. 3, the rubber air cushion is illustrated showing the inflating valve. Combining as it does the good points of both hard and soft saddles, it is claimed to be "so constructed with its perfect pneumatic device, that it can be made as hard or as soft as desired, by the operation of inflation; and when inflated properly, it possesses that soft yielding quality so necessary to health and comfort, and so often looked for in similar saddles without complete success." An imperfectly constructed seat to a saddle can be made to give such a shock to the nervous system, caused by the

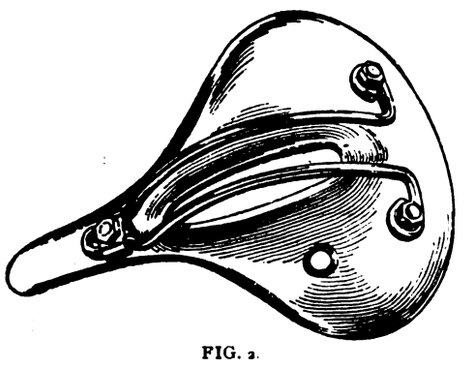

FIG. 2.

jarring upon the end of the spinal column, as to entirely destroy the pleasure which should invariably accompany the use of a cycle. The Perry Saddle, with its pneumatic attachment, in addition to all the other usual concomitants of a good seat, combines so many commendatory features as to make it especially recommended by physicians for the use of those ladies who have found other saddles objectionable from too great a rigidity. To combine strength with lightness it is made with a stamped steel base. This base is covered with a layer of the softest felt, to prevent friction between the metal and the rubber cushion, which is next placed in position. The pneumatic cushion, manufactured by Morgan & Wright, is constructed upon original lines patented by this company, and rises but ⅞ inch when fully inflated; it having been found by experiment, that too great a thickness in the volume of expansion makes a seat in the saddle less secure. Even when deflated the limited area of expansion possible in this saddle, causes it to be ridden with perfect se-

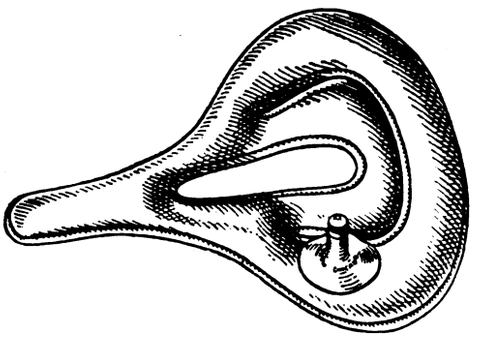

FIG. 3.

curity because of its conformation providing a solid seat. It is finished with a covering of the finest oak tanned leather, in black and several shades of tan, which does not soil or grease the clothing. It is inflated by the aid of a Morgan & Wright '97 valve placed at one side. In its construction the anatomy of the human frame seems to have been carefully considered in every posture possible to be assumed in the use of a cycle saddle.

The Cash Register Industry.

No industry, perhaps, has made such rapid progress during the last decade as the manufacture of cash registers. The cash register field is now largely controlled by one immense concern, the National Cash Register Co., of Dayton, Ohio, and it is said that they "make ninety-nine per cent. of all cash registers used in the world."

The machine in itself is one of the most intricate inventions of late years; it combines a cash register, a typewriter, a printing press, an adding machine and a paper cutter, all in one, and nothing but the finest tools are and can be employed in its manufacture.

The National Cash Register Co. maintains one of the finest organizations in factory history. This organization is employed in the manufacture of cash and autographic registers only. It has the largest force of tool makers employed by any one manufacturing concern in the world, who make tools for the exclusive use of their own machines. As has been well said: "While this company own and control a great part of the cash register patents in the world, yet the secret of their success is mainly due to their wonderful organization, and the fact that they manufacture cash registers which are perfect in every detail. This is especially true in England, Germany, France, Belgium and Holland, where the company have no patents whatever, and their registers are sold almost exclusively in competition with other native companies."

Parks & Parks, Troy, N. Y., had a very narrow escape from a complete destruction of their works by fire within the past ten days. Even as it was, the rear portion of their large building was entirely destroyed. They had on hand stored in the adjoining room, over 10,000 pelts which were intended for their sheepskin polishing mittens, which is one of the most popular productions of this firm.

The Lansing Wheelbarrow Co., Lansing, Mich., have bought the stock, machinery and good-will of the business of the Davies Iron Works, Muskegon, Mich., formerly manufacturers of warehouse trucks, and will continue the manufacture of their specialties

Digitized by Google

Review of the Markets.

There are but few changes in regard to business noticeable since our last report. The market may be said to be in a state of dignified dullness, remarkably so in many ways considering the month, and prevailing conditions of ample stocks and satisfactory quotations to tempt the possible purchaser. The season bids fair to be found a shorter one than the interests of the business should have preferred. The delay in regard to the adoption of a tariff may be said to be one of the principal predisposing causes; it certainly looks as though the "dog days of August" will reach us before any statesmanlike settlement of this portentous matter is likely to be arranged.

Wire Nails: The conditions surrounding this important industry have not materially changed since our previous report; the demand keeps up in fairly good shape, while the slightly lessened supply holds the market in such a state as to make competing interests not actively aggressive. We quote as follows: Carload lots at mill, f. o. b., $1.35 a $1.40. New York prices for smaller lots from store, $1.60 a $1.65.

Cut Nails: With a moderate demand, cut nails continue under similar conditions that prevailed at the time of our last report. A limited demand on orders, covering an assortment for daily wants, with prices remaining as previously: Car load lots delivered, New York, $1.40; Philadelphia, $1.38; Boston, $1.42; smaller lots from store being held at 10 cents a keg advance.

Linseed Oil: A change in price is noted in this important staple. The Dean Linseed Oil Co., under date of May 18, quote as follows: In lots of less than 5 barrels, 31 cents per gallon; in lots of 5 barrels or more, 30 cents per gallon; Boiled Linseed Oil, 2 cents per gallon higher; Calcutta Oil, 50 cents per gallon.

THE PITTSBURG TRADE.

There is a waiting, hesitating feeling in business just at present that makes spring trade rather disappointing. Just what is the matter it is hard to say; probably there are several causes operating to delay the expected revival. One of these is no doubt the immense producing capacity of our manufacturing concerns, which the recent hard times have tended to increase. Finding it necessary to reduce cost, it has been done by increasing output, with less labor and more automatic machinery. We shall have to adjust ourselves to this new condition, use up more goods, or find new markets for them.

The wet season has made a big demand for lawn mowers; stocks have had to be renewed and still they call for more. Poultry netting has had a large sale, also, this season, probably induced by the extremely low price. Fishing tackle is selling well. The country districts are beginning to send duplicate orders for bicycles, showing that the roads are getting into riding condition. Good roads would be of great benefit, not only to bicyclers, but to all classes. LOGAN-GREGG HARDWARE CO.

THE COLUMBUS TRADE.

Trade has been excellent for the past two months, and April was our banner month. The volume of goods sold is all that could be asked for, but we are sorry to say that it is not true of profits. Goods are being sold on too small margins by both the jobber and retailer. In years gone by, there were only a few articles that were classed as staple goods, and sold at less than cost of handling them, but the list has grown until it is as long as a fence rail, and some kind-hearted individual is adding a new article to the list every month.

We are happy to say that we have been able so far to get our three meals a day, and are thankful that we enjoy them. It is hard to sell consumers more than they can consume, and as a general rule, they will buy what they must have at a reasonable price just as readily as they will at a cut price. We find trade in the good agricultural districts is very encouraging. Farmers have a bright prospect for an ample harvest, and with the better prices that farm products are bringing, they are feeling much better. We think trade will be still better in the fall, unless some calamity overtakes us.

The bicycle business is booming, and so far as we know, all leading manufacturers are behind with orders. Wire and nails have held their own for the past two weeks. Glass is about 10% higher. Rope is very low in price and it would seem to be a good time to stock up reasonably. Some manufacturers have withdrawn the extreme low prices on tacks. The county treasurer still keeps his price on *Tax* at $1.00 net. We would like to get a double-pointed tack discount, but we can't always get what we want. Binder twine is badly demoralized by outside makers. We mean by makers of twine that haven't the reputation that some old manufacturers have, but standard makes are held firm, and we think they will have no trouble in marketing their stock, as the demand will, no doubt, be heavy. The weather has been too cool for vegetation during the past two weeks, but so far no damaging frosts have come, and we hope all danger from that source is now past.

SMITH BROS. HARDWARE CO.

THE CLEVELAND TRADE.

It has been some time since we have communicated with you in regard to the condition of the market in this section, and largely because there was so little of any interest to communicate, as the outlook was so unfavorable that we did not care to make people feel worse by our own croaking.

Now that we begin to see a little light, we may feel a little more like saying something. We cannot truthfully claim that the volume of business for the year to date, or even at the present time, is at all satisfactory, but we fancy that we see some rays of light ahead, that lead us to believe we are approaching the promised land.

Reports from crops throughout the territory tributary to us are most gratifying, indicating that our farming population, who have been suffering from all manner of evils during the past three or four years, are at last to have reasonably good times. We have had splendid climatic conditions for the last sixty days, and everything in the way of vegetation is in good shape.

When we consider that out of our total population 42 per cent are farmers, as has been stated by some one who has taken the trouble to investigate, it would be easy to realize that their prosperity means a great deal to the other 58 per cent, as the farmer is notoriously a good spender of money when he has it.

Values of Hardware continue very low, and there is no immediate prospect of any change. The demand for tools continues as light as it has been for the past few years; occasional items, however, like lawn mowers, scythes, etc., show a heavy demand, but at a meagre margin of profit. We hope by the time another two weeks roll around, that the skies will have brightened still further, and that we may have even a more encouraging report.

MCINTOSH-HUNTINGTON CO.

THE PHILADELPHIA TRADE.

So far the spring of 1897 has gone by without a spell of really warm weather, and, consequently, it lacks the stimulus which is sure to come when a high thermometer makes a demand for screens, mowers, refrigerators and such seasonable goods.

Despite, however, the demand for screen doors has been phenomenal, so much so that stocks are very bare, and it is almost impossible to fill orders promptly. Lawn mowers are also in fair demand, and, on the whole, a fair number of orders are coming in, which are steady in volume, but indicate careful buying. It does not seem as if there was

Digitized by Google

anything in the market to justify caution in this particular. as prices were never so low, and manufacturers are undoubtedly making many goods at a loss, and are already becoming very restless and showing a strong desire to get better prices at the earliest possible opportunity.

Already there have been rumors of advances in the nail market, but it is a little too early to say anything positively; still it has stimulated buying to some extent, and advances threaten to take in wire, and all goods which are priced with wire as a basis.

Collections are improving, with prospects of still greater brightening in this respect as the season advances and the crops come in. In the South trade is slacking, as is usual at this time of the year, and in the West, owing to the floods and other causes, trade is hardly up to the mark, but home conditions are better and the spring demand for bicycles and bicycle sundries helps greatly.

Prices show very few changes except, as we have already said, there does not seem to be much desire to shade prices any closer, and the slightest indication of an increased demand would soon create a rise in values.

BIDDLE HARDWARE CO.

THE MINNEAPOLIS TRADE.

There is quite a decided improvement in business, no large buildings of any kind going on, but quite a quantity of moderate priced houses. We think the most of our contractors are fairly well employed. The saw mills have started, thus giving employment to many men that have been anxiously waiting for this time. Seasonable goods, such as garden hose, lawn mowers, etc., are moving off in fairshape. Nails and barbed wire are badly demoralized in this market as heretofore, with no prospect of improvement that we can see. With these exceptions, we think conditions are much better than they have been. Collections show signs of improvement. The prospects of a good crop were never better, and in spite of the floods there is an increased acreage seeded over last year, and while rain was not badly needed we have had some that certainly has been of much benefit. If nothing happens to prevent, there will be the largest crop this fall the Northwest has ever seen, and undoubtedly higher prices will prevail than farmers have been able to get for their product for the past few years.

W. K. MORISON & CO.

THE GRAPHITE TRADE.

We consider business fairly good, although less in aggregate than last year.

Orders arrive in quantities, but not so individually large.

Graphite paint is a leader at this season of the year, and the sales are prominently large. Every thing in the Graphite line is ordered as usual, and no present indication of a lull.

Small orders continuously arrive from concerns throughout the country, indicative of activity in the small brass melting industry. For the past two or three years this industry has been practically dead.

The daily mail is full of inquiries for prices, and we get a good percentage of orders from our replies.

We have not anticipated a "slam-bang" boom in general business, and will be well pleased to realize a slow, sure, healthy return to good times.

JOSEPH DIXON CRUCIBLE CO.

The New York Creditmens' Association have recently opened their new rooms in the Central National Bank building, No. 320 Broadway, New York. They extend an invitation to those in the trade, interested in the objects of the association, to join with the members on May 20th between 3 and 6 P.M. in an inspection of the new rooms and the methods of the association, the officers of which being present, would be glad to dilate upon.

A Model City In Dreamland.

An advanced thinker tells a story of a man who went to sleep in the year 1900, and dreamed he was in a city governed by women, who, under the cabalistic initials of T. I. A., dominated the local government.

It was a city scrupulously clean, and while walking around he saw three men arrested for spitting upon the model pavements. There was a garbage barrel at the rear of each lot, which was hand painted and tied with blue ribbon; mail boxes were decorated with tidies, and the fire plugs were invested with cushioned seats on top of them having a corded edge.

Sweet pea vines were climbing the lamp posts, and hand painted cuspidors occupied a prominent place on each corner, having a metal mat under each of them to provide for too careless an aim.

All the business done needing a vehicle was with those only that were provided with pneumatic tires. The curbstones of the streets were provided with a system of sprinklers, operated at intervals from a central point, by which the streets were kept free from dust at the expense of the city.

A policeman was stationed at the railway depots to see that those entering the town wiped their feet on the public mats placed conspicuously for the purpose.

All men "out with the boys" and not getting home before curfew, were incarcerated in the lockup over night. The curfew bell was rung promptly at nine P. M., by two taps of the fire bell, when every light in the city was extinguished, and the inhabitants retired for the night.

No unsightly trolley poles, with their wire attachments, were permitted to desecrate the landscape; nor were electric lights allowed to pale the domestic effulgence which burned through six-foot burners until curfew.

The dreamer awoke before he was able to learn the name of the place, but the inhabitants of a very pleasant suburban town named "Montclair," have no doubt they could guess its location.

Exports of Manufactures.

The Washington correspondent of the New York *Journal of Commerce* gives this table exhibiting the growth of manufactured exports since 1860:

Year.	Exports of Manufactures.	Per cent of Total exports.
1860	$ 40,345,892	12.76
1870	68,277,764	15.00
1880	102,856,015	12.48
1885	147,187,527	20.25
1890	151,102,376	17.87
1891	168,927,315	19.37
1892	158,510,937	15.61
1893	158,023,118	19.02
1894	183,728,808	21.14
1895	183,595,743	23 14
1896	228,489,893	26.47

These are the fiscal years and enough is known of the present fiscal year of 1897 to make it safe to say that the record of 1896 will be beaten.

United States Consul Stephen at Annaberg, reports that the Bulgarian government is now considering the advisability of introducing agricultural machinery into Bulgaria. While no definite conclusion has yet been announced, it is probable that offers will be invited for supplying a certain number of threshing machines and portable engines, to be delivered this summer in various selected districts. The consul says this is a most tempting opportunity for American manufacturers, and, for their benefit, he quotes from an authority as to the best means to compete for this trade.

The Christy Knife Co. and the Fremont Cutlery Co., Fremont, Ohio, have appointed R. Christensen, No. 83 Chambers Street, New York, as the manager of their branch offices at the above address.

Howard Bench Vises.

The Bench Vises, manufactured by the Howard Iron Works, Buffalo, N. Y., continue to increase the popularity they have always enjoyed. Being noted for great strength, durability and excellent construction, the sales during even the period of depression from which we are now emerging have been extremely satisfactory. Among numerous advantages claimed for this vise, may be mentioned: the malleable cast iron nut of the vise, is rendered immovable

by being set in molten iron, thereby doubling the durability of both nut and screw; as they are, in consequence, saved from the destructive, grinding, cutting and binding action of the cross strain, which have always proved detrimental to continued usefulness heretofore. Another improvement claimed is the chilling of those parts of the slide sheath that come in contact with the slide, thereby avoiding much friction in its movement.

The Slate Trade Abroad.

From the advance sheets of Consular Reports, we note the following, in regard to the slate trade in Belgium. The department is in receipt of the following from Consul Morris, dated Ghent, March 16, 1897: Slate is not produced or manufactured at Ghent or in this immediate vicinity. Considerable slate is used here for roofing purposes, and also for lining old-fashioned outhouses. About 6000 to 8000 school slates are sold annually in Ghent. Slate blackboards are not used. Slate for roofing is produced at Herbemont and Vieil Salm, in the province of Luxembourg, Belgium. There is also considerable slate imported. The number of pieces brought into the country during 1895 amounted to 37,719,682, valued at $145,598.04. The importations from various countries were, in 1895: From England, 660,400 pieces, valued at $2549.15; France, 36,300,882 pieces, valued at $140,314.47; Germany, 1500 pieces, valued at $5.90; Grand Duchy of Luxembourg, 693,500 pieces, valued at $2676.91; other countries, 13,400 pieces, valued at $51.72. A total of 37,719,682 pieces, valued at $145,598.15.

The import duty on slate is 77.2 cents per 1000 pieces. School slates come chiefly from Germany, from the house of Faber, the slates of this manufacturer being favored by the school authorities.

Many a man has failed in business because he failed to select the right business.—*Hardware and Metal Reporter.*

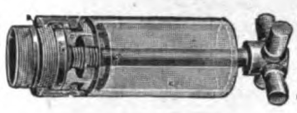
Death of Lucius S. Miller.

Lucius S. Miller, who for many years has been associated with the Hardware trade of this city, died suddenly from apoplexy on Friday last, at about noon, while in the salesroom of Oakman Brothers & Co., cutlery and silverware manufacturers, No. 123 Chambers Street. Mr. Miller was about 55 years of age, and very active in business affairs; represented as local buyer the old established house of J. D. Weed & Co., Savannah, Ga.; at the same time holding an interest in the syndicate Hardware firm of W. B. Fox & Bro., at No. 97 Chambers Street, where his own offices were located. He was a college graduate and well-informed gentleman. Too much cannot be said of his sterling integrity and devotion to the interests entrusted to his care, having occupied positions of trust since his advent in this city twenty-seven years ago, when for several years he was the travelling representative of the Stanley Works, which position he relinquished to go abroad in the interest of W. B. Fox & Brother; since which time he has been intimately connected with this firm, conducting principally the export branch of their extensive business.

He leaves a widow and one son, Mr. Charles E. Miller, who is a travelling salesman for the Iron Clad Mfg. Co., Cliff Street.

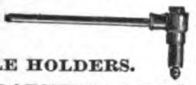
Death of Rudolph Lienhart.

We have received the following announcement as a memorial card: "With deepest sorrow we have to announce the decease of Mr. Rudolph Lienhart, the secretary of our company, who has been identified with us and our predecessors for many years. He died suddenly on Sunday, the 16th inst. WIEBUSCH & HILGER, Limited."



Mr Lienhart here referred to has been identified with the above well-known house as secretary since its formation. He was a gentleman of the old school, one who would reflect honor and dignity upon any sphere in life in which he might be placed. Actively industrious in all the duties appertaining to his responsible position, and conscientious in the extreme, he leaves a memory with his friends they can refer to with satisfaction and composure.

A Salesman's Essential.



The Cincinnati *Enquirer* very correctly says that it is one of the most essential characteristics of a successful salesman that he should be entertaining. Not entertaining after the negro minstrel style; no low comedian business, but entertaining in an intelligent, manly, business fashion. To be acceptable in full to customers, one must be more or less attractive, one must make an impression decidedly in his own favor. The neutrality that neither attracts nor repels will not do. There must be some particular influence that gives him an advantage over the average either in conversation, in appearance, or intellectually. The customer must be favorably disposed to him and willing to accept his reasoning; in fact, he or she must be willing to be convinced, in order to be convinced, and the personality of the clerk is the factor which must create this willing disposition on the part of the customer.

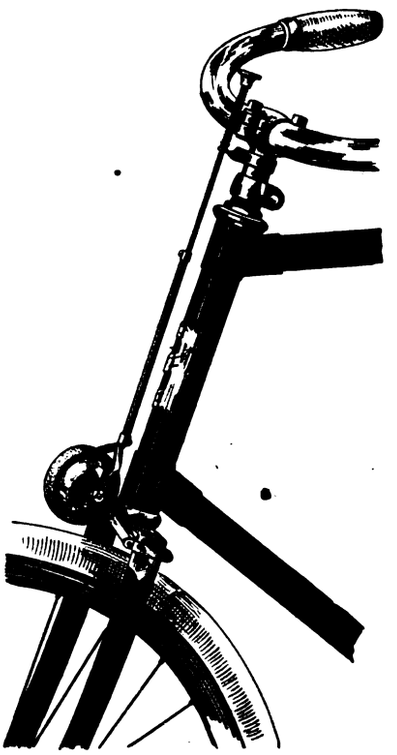
The Reform Curry Comb.

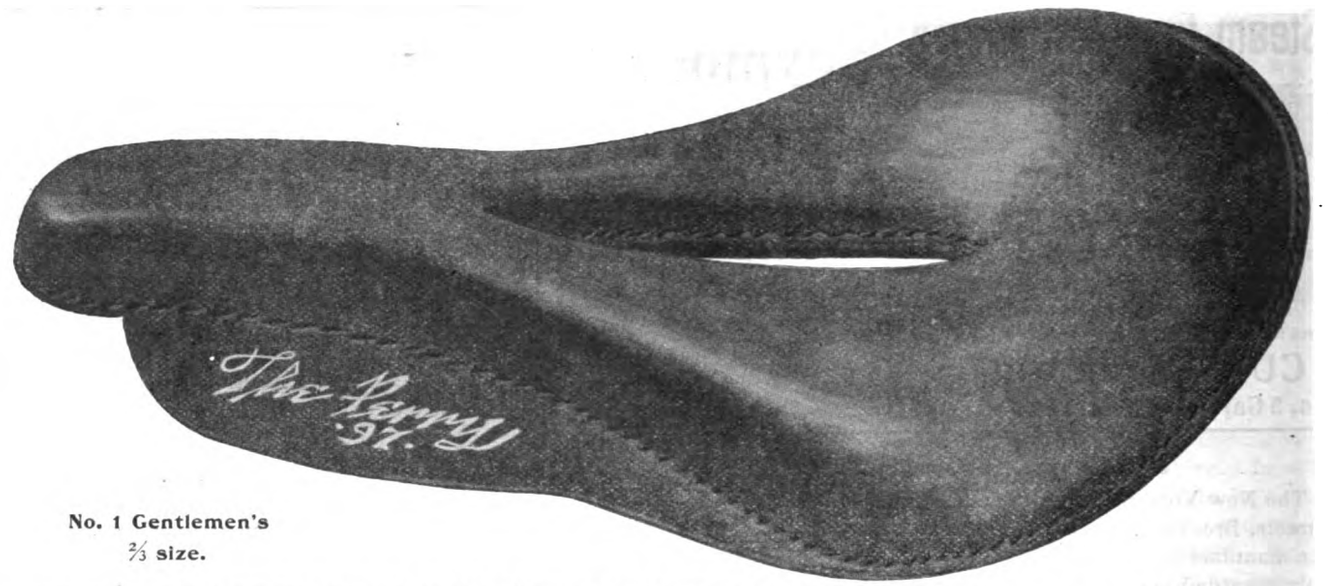
The New York Stamping Co., North Eleventh and Berry Streets, Brooklyn, N. Y., who for many years have been the manufacturers of a line of Curry Combs well and favorably regarded by the Hardware trade of the country, have added to their assortment, one of the most important specialties in that line, and which possesses originality and utility to so great a degree it is bound to become a favorite wherever introduced. It is called the Reform Curry Comb, and in the illustrations herewith, the back and face view is shown which gives a good idea of its general appearance. The construction of this curry comb is of extreme simplicity. The comb proper is composed of three shallow, oval trays, having corrugated edges; these trays are struck up by automatic machinery from cold rolled steel made especially for the purpose, and after being firmly riveted together as to be practically inseparable, they are heavily tinned and bronze lacquered, so as not in any way to be susceptible to rust The outside dimensions of the Reform Curry Comb being 6½x4¼ inches makes an available cleaning sur-



face largely in excess of that furnished by an ordinary curry comb. It is claimed that by reason of this notable gain in tooth surface, a horse can be cleaned in one-half the time required when adopting the usual methods, consequently demanding less labor on the part of the operator. The claim is also made that the Reform Curry Comb cleans with equal thoroughness a short coat or the long furry ones incidental to the winter season; as from the manner of its construction, not the smallest part of the coat can escape the comb, which is so designed as to avoid irritating the most sensitive skin. Among the many advantages referred to, it is noted the comb has no facilities for the storage of hair, requiring but the slightest tap on its face to free it of all obstructions. It would seem as though this self-cleaning feature would strongly recommend it to all grooms, especially during the shedding period of their horses, when the ordinary combs are sometimes wanting in efficiency.

Bicycle riding cures dyspepsia, and dyspepsia is one of the greatest foes of religion.—*L. A. W. Bulletin.*

Osterman's Bicycle Bell.



Joseph Osterman, Manayunk, Pa., patentee and manufacturer of the Osterman Bicycle Bell, is placing this ingenious bicycle appliance before the public through the medium of the Hardware trade, and other dealers in bicycle sundries. We present herewith an illustration of the same, showing its novel features, which naturally insures a speedy sale wherever its merits are made known. By a simple pressure upon the button, visible above the handle bar, the revolving disc is made to come in contact with the tire, and an alarm is sounded as distinctly as if emanating from an electric bell It can be attached to any make of wheel and having apparently no movable parts subjected to any great amount of wear, it is unlikely to get out of order. It is claimed to be manufactured from a superior grade of bell

metal and is very highly plated, making it extremely attractive in appearance. The alarm is operated entirely by gravity, and the sound to be made, whether light or heavy, is entirely under the control of the rider; when placed upon the wheel it is in harmony with its general appearance, being centrally located and does not throw the wheel out of line. It can be kept ringing as long as the wheel is in motion even if the cyclist is walking beside it. It presents many new and original features and would prove attractive. List prices with discounts to the trade, will be furnished by the manufacturer upon application.

To make fireproof paper nothing more is necessary than to saturate it in a strong solution of alum water, and when thoroughly dry it will resist the action of flame.

Write for catalogue and mention "HARDWARE"

Pike's Pocket Hones.

Our English contemporary, *The Hardwareman*, referring to the acknowledged improved methods of the "Yankees" in marketing their products, has this to say of the latest novelty of the Pike Mfg. Co.: "A capital idea, which strikes us as new, has been carried into effect by an American firm. It is a small box of pocket knife hones, selling at 25 cents (say 1s.) each, and exhibited in a show-case similar to those brush cases which we see on the counters of house decorators and ironmongers in this country. Now we are tolerably certain that there should be a good demand for this article. The average man likes to keep his pocket knife in good condition, and it is forever getting blurred and blunted. He cannot be constantly rushing off to the needy knife grinder, and accordingly would gladly furnish himself with the requisite article for sharpening his trusty blade. We believe the Britisher would do a good trade in this line if he would only make a beginning. If he does not take our friendly hint we shall really be compelled to encourage our Yankee friend to try his luck in Great Britain."

The Hardware merchants seem to have struck the right road in their efforts to avoid the grasp of the "department store octopus." Instead of rushing to the legislature for laws to prevent the department store people from doing business, they will meet the competition of these institutions with the best of modern business methods. The convention was made up of the brightest body of business men that has visited St. Paul for a long time. They are capable of carrying out any plan that their association may devise.—*St. Paul, (Minn.), Dispatch.*

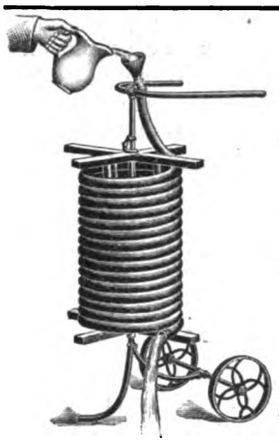
A GOOD THING.

IT'S IN THE TEETH.



The Patent "REFORM" Curry Comb is composed of three shallow, oval trays, with corrugated edges. The parts are struck up from a fine grade of cold rolled steel, heavily tinned and bronze lacquered, firmly riveted together and warranted not to rust. The outer dimensions are 6½x4¼ inches and by reason of the large cleaning surface and peculiar arrangement of teeth, the comb will do its work with a large saving of time and labor, cleaning with equal thoroughness both long and short coats. There are no places to accumulate hair and it will not tear or injure the brush, the comb being quickly freed from accumulation by giving its face a gentle tap.

Our Name Plate.

A Black Diamond File.

"You seem to have some kind of a treasure there?"

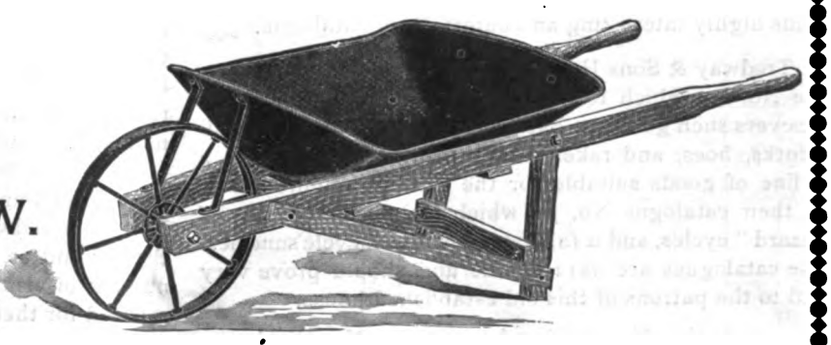
The gray-haired old blacksmith had put the bulk of his tools carelessly away on their customary shelves, but one article he had wrapped in paper. About to deposit it in a corner of a chest with a stout lock, he halted the movement with a smile.

"I have," he nodded, "of the rarest kind."

"A memento, a keepsake, eh?"

"No, an old friend."

"Looks like some kind of a tool."



"That's just what it is—A Black Diamond File."

He drew it out from its covering now, and he eyed it and he fondled it as if both memory and service had indeed endeared it to him through long association.

"A kind of a tool," he repeated softly. "It is the kind you don't run across everywhere in these cheap, quick days, when everything goes, the kind that was made honest and acts honest. Once in a while an old fossil like me runs across an idea and clings to it like moss. This file is one of them. See here. In comes a man with a tool. It is new and pretty. It's this, it's that, everything that is right, he says. I get dazzled and buy, whack! comes a blow, and the tool breaks. This one does not. I bought that file on a representation that's held out. First, they said it would cut, and it cuts. They said it would last, and it lasts. They said it was standard. It's all that. When I have a friend that don't bend before a storm, that helps me through hard tugs and soft tugs alike, that stands every test and comes up smiling, what do I do? Treasure him, cherish him, treat him well, don't I? Well, that is the case here. I'd keep that old tool in velvet if it would show my appreciation any better. It is like having a friend and treating him as such. My temper-keeper is my Black Diamond File."—*Chicago Journal of Commerce.*

Recent Trade Publications.

E. C. Stearns & Co., Syracuse, N. Y., have added a line of admirable ice cream freezers to their list, and are preparing to place them on the market in large numbers during the coming season. The firm's advertising department has just issued a dainty booklet entitled "Novelties in Creams and Ices," printed on rough paper in two colors, and containing thirty-two pages of new and unique receipts for ice creams, iced puddings, sherbets, etc., and a number of hints for the soda fountain as well. It is claimed that the freezer is one of the speediest ever put out, and in the booklet is an affidavit signed by Iram C. Reed, manager of the Onondaga County Milk Association, to the effect that the freezer made a record of two minutes and fifty seconds for six quarts, under his supervision. The book, "Novelties in Creams and Ices," has this to say: "The Stearns freezer consists, first, of a tub or pail, built of selected Virginia cedar, mortised securely and strongly reinforced with heavy steel hoops. The gears, dashers, shaft, etc., are made of the best quality of iron, galvanized, and the can is made of the very finest quality of charcoal tin plate. The gearing is securely covered and cannot become clogged. The upper and lower gears and the crank gears are so nicely adjusted that only a minimum of effort is needed in freezing. The entire gear frame can be swung on a pivot so as to be out of the way when packing and unpacking the tub. This feature greatly facilitates the operation of freezing. The Stearns is absolutely the most rapid, the most effective and the strongest freezer on the market." "Novelties in Creams and Ices" may be had gratis on application to E. C. Stearns & Co.

The Stoddard Mfg. Co., Dayton, Ohio, manufacturers of the Tiger and Tigress bicycles, have issued about as handsome and artistic a bicycle catalogue for 1897 as has reached us this season. Taking as a text "How the world rides," it makes a pamphlet of thirty-six pages, which includes a beautiful cover, the colored illustrations adorning which are in imitation of water color paintings. At least one-half of the catalogue is devoted to illustrating the various modes of conveyance in use throughout the world, printed beautifully and carefully in two colors; and showing the palanquin, elephant, Arabian horse, camel, mules in Egypt, snowshoes, reindeer and Esquimo dogs; Indian's horse, cowboys' broncho and buggies and bicycles for the United States. Incidental to all this, with an interesting recital of the varied methods illustrated, full page engravings are given, showing gondolas of Venice, the English "four-in-hand" coach, the Chinese palanquin, the Japanese jinrickisha, and the sleighs of Russia. Very attractive full pages these engravings make. The rest of the catalogue is filled with a full and complete description of the "Tiger" and "Tigress" bicycles and tandems manufactured by this company. All of the mechanical features, special points of interest and improvement, are carefully pictured and fully described. Many of these features of excellence are unique and worthy of close attention. It would behoove those in the trade, interested in the sale of bicycles, to send for this highly interesting and entertaining catalogue.

A. Tredway & Sons Hardware Co., Dubuque, Iowa, catalogue No. 19, which forms their spring circular for 1897, and covers such goods as Batcheller hay, manure and spading forks, hoes, and rakes, scythes, lawn mowers, etc., a full line of goods suitable for the seasons' requirements. Also their catalogue No. 20, which includes their line of "Wizard" cycles, and a full assortment of bicycle sundries. These catalogues are 9x12 in size and should prove very useful to the patrons of this old established house.

Sargent & Co., No. 37 Chambers Street, New York, are distributing a number of extra pages for their 1894 catalogue. These pages cover a line of covered spring snaps, cylinder screen door night latches, extra heavy hinges, for water closet and other doors; loose pin ball tip butts, "Elm City" padlocks, with six levers, window pulls, heavy sash centers and sash fasteners.

New Aladdin Cycle Lamp.

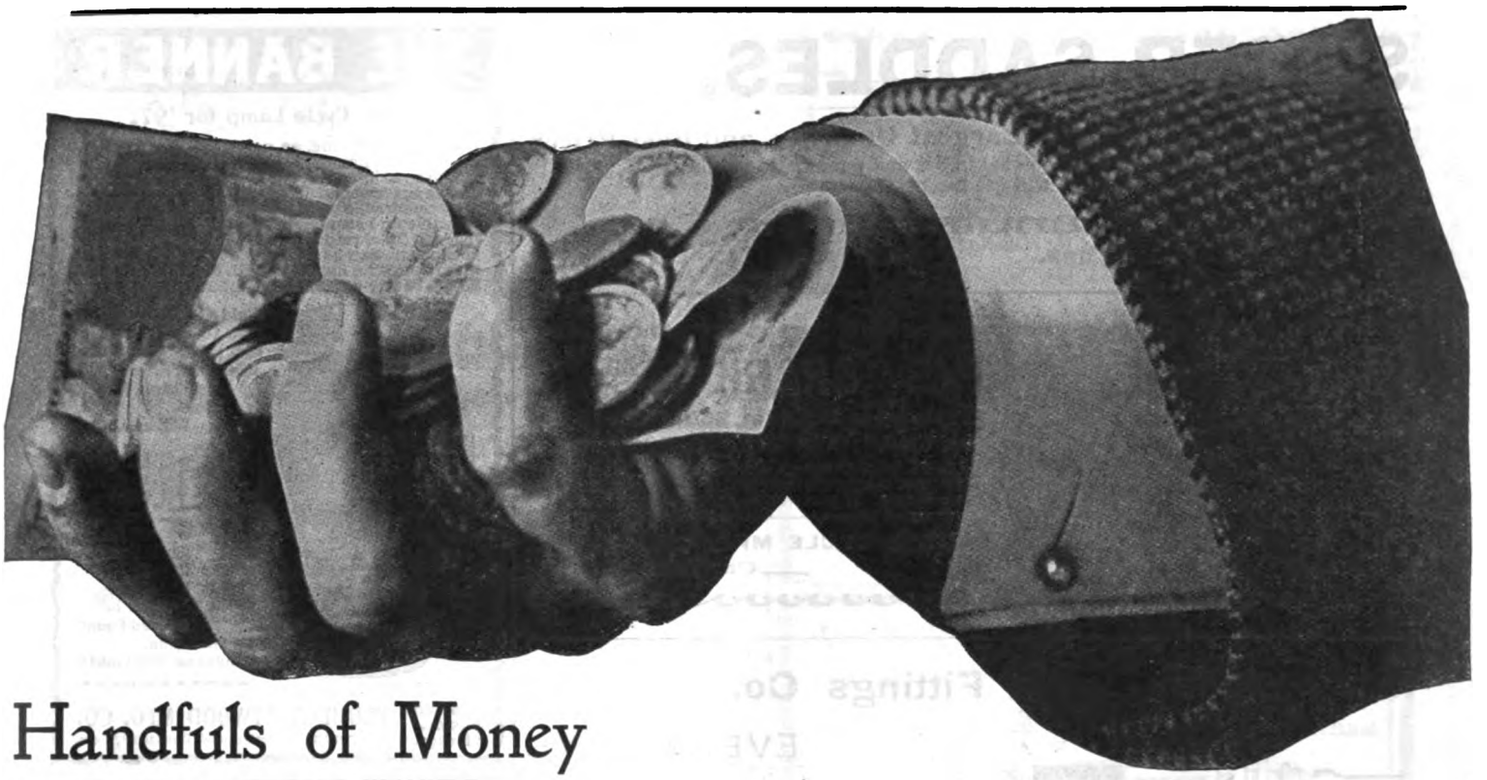
The Aladdin Lamp Co., No. 518 Broad Street, Newark, N. J., are manufacturing and distributing through the Hardware trade and dealers in bicycle sundries, the New Aladdin Cycle Lamp, for which they claim a number of novel features which should place it in the front rank of moderate-priced cycle lamps.

It is thoroughly made from drawn brass, heavily nickel plated, on graceful lines, combining lightness with strength. No solder is used in the construction of the body. It is five inches high over all, weighing complete with bracket attachment but nine ounces. The font has a capacity enabling it to run for fifteen hours, and is made so the oil cannot flood the flame. A patent lighter makes it possible to light the lamp in the highest wind. It burns any heavy or mixed oil, and avoids the smoking inseparable from the use of pure kerosene. The oil font is secured to the body of the lamp by an exceedingly simple fastening device, and the lamp is provided with an ample draft which guarantees a perfect combustion. The popular price at which the New Aladdin Lamp is sold, is $2.50 each.

Death of Charles E. Parker.

Charles E. Parker, of the Charles Parker Co., died quite suddenly from pneumonia at 1:30 A. M., on May 11, at his home in Meriden, Conn. He had been ill for quite a while but his demise came very unexpectedly, as the family believed he was on the way to a speedy recovery.

Mr. Parker had been, since 1877, the vice-president of the Charles Parker Co., which was founded by his father more than half a century ago. The company is one of the best known among the trade throughout the country as leading manufacturers of fire arms and general Hardware, having their factories at Meriden, Conn., with branch offices and warehouse at No. 96 Chambers Street, New York.



Mr. Parker was fifty-five years of age, was a member of the Hardware Club of this city, president of the American Steel & Copper Plate Co., vice-president of the Hall Signal Co., and treasurer of the Columbia Shade Cloth Co. His funeral took place at the home of his father, No. 816 Broad Street, Meriden, his father, Charles Parker being still living at the advanced age of eighty-seven years.

The Kansas City Convention of Creditmen.

At the regular meeting in May of the executive committee of the New York Creditmens' Association, the six delegates to which they are entitled, were appointed to represent the association on June 9th, 10th and 11th prox. at the Kansas City Convention of the National Association of Creditmen. Arrangements have been made that will make railroad fares of one and one-third regular rates, obtainable by the visitors, which would reduce the expense from $66 to $44 for the round trip. The executive committee look forward to a large representation of their present membership, who will find their stay in Kansas City not only pleasant but profitable. It would be good policy for those intending to go, to notify the secretary H. J. Sayers, No. 320 Broadway, New York, as early as possible, so that the committee in Kansas City may be notified as to the number of visitors, that suitable accommodations may be secured for their comfort.

A mile of railway permanent way, with two sets of rails, takes up two and one-half acres of land.

To Bicycle Riders.

WE MAKE OUR TUBE OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL Is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted] and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory corroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

Courtland, Minn.—G. W. Schlottman.

DeGraff, Minn.—Jas. Clemmer.

Delavan, Ill.—Smith & Moorhead.

Denison, Texas. — Hall-Leeper Hardware Co.

Elgin, Ill.—Smith, Orton & Moore.

Finley, N. D.—R. I. Simonson & Co.

Hoffman, Minn.—G. Aamoth.

Los Angeles, Cal.—Russell Hardware Co.

Martinez, Cal.—Blum Bros. & Co.

Mount Morris, Mich.—Algoe & Miller, of Flint, open a branch store here.

New Waterford, Ohio.—J. W. Kinner & Son.

Ortonville, Minn.—C. F. James.

Osman, Ill. — L. N. Dalburg will start soon.

Raymond, Minn.—Goodenow, Winter & Enkema; branch store.

Sacred Heart, Minn.—P. M. Anderson.

Thorntown, Ind.—C. H. Beach & Bro.

Wellington, Kan.—The Gelino Hardware Co. has been incorporated by William Gelino and others. Capital stock, $5000.

Williamsburg, Mich.—Charles Will.

Changes and Removals.

Augusta, Mont.—F. Dauffenbach; stock sold to H. F. Eichler.

Bad Axe, Mich.—The Saginaw Hardware Co. has gone out of business; stock has been purchased by W. Hawks, of Fort Austin, who will remove it to that place.

Bancroft, Mo.—Wood & Ogden, succeeded by Melvin White.

Beattie, Kan.—O'Neil Bros. succeeded by Bell Bros.

Bedford, Iowa.—The Bedford Hardware Co. Business has been purchased by D. D. Doran & Son, who will handle furniture also.

Brownsdale, Minn.—A. L. Tolletson & Co. will sell out business.

Chatfield, Minn.—Chermack Bros. & McGrew; Joseph Chermack will withdraw from the firm.

Cottage Grove, Ore.—Register R. M. Veatch, of the land office at Roseburg, has purchased a half interest in the branch store of the Griffin Hardware Co. The firm will hereafter be known as Griffin & Veatch.

Duquesne, Pa.—George J. Rudolph sold out.

Durango, Col.—The People's Hardware Co. have shipped the remainder of their stock to Silverton, and Mr. Bollinger, the manager, will have the company ready for business at once, occupying the old Fred. Sherwin store.

Galena, S. D.—The new block for S. T. Voorhees is rapidly approaching completion.

Gallatin, Tenn.—Ellis & Soper sold out to J. T. Reynolds.

Hudson, Mass.—John C. Holden and John H. Robinson, the Hardware dealers who dissolved partnership recently, have patched up their differences, and formed a new firm under the old name of Holden & Robinson.

Jamesport, Mo.—Richard Isherwood has bought the stock of Hardware formerly owned by William Moran, of Gallatin, and will move it to this place.

Los Angeles, Cal.—C. W. Metler & Co., of San Bernardino, are doing well with the store recently established here.

Lyons, Ind.—H. Soames & Son; succeeded by R. O. Law.

Mackinaw, Ill.—George Smith has disposed of business to Gus. Metzler, of Stanford.

McConnell, Ill.—F. R. Man is building an addition to his Hardware store, which he intends using as a tin shop.

Mechanicville, N. Y.—Baker & Bunce have dissolved, Mr. Baker continuing the Hardware business, and Mr. Bunce the plumbing department of the old establishment.

Neoga, Ohio.—Shaffer Hardware store; half interest purchased by W. Cass Stevens.

North Bend, Neb.— Harvey I. Adams; succeeded by W. H. Seevers.

Park Rapids, Minn.—Tennis & Plummer; business purchased by Fuller & Denning.

Pawtucket, R. I. — Duffy Bros. have moved into their new quarters in the Smith building, Main Street, and will soon be able to display as fine a stock of Hardware, etc., as any store in the State.

Perham, Minn.—Hassler Bros. have dissolved partnership.

Port Jervis, N. Y.—Fred. O. Beattie, of Warwick, has made arrangements to buy an interest in the business of Swinton & Co. Beattie is well posted in the Hardware business, having had a number of years' experience with Ogden & Pelton, of Warwick, and in his new connection will prove a hustler.

Portsmouth, Ohio.—The Hardware stock owned by W. L. Russell, who was for many years in business on Front Street, is for sale, as Mr. Russell has decided he will not resume business, his store having been closed several months.

Rochester, Ind.—Wilson Hardware store; half interest purchased by J. L. McClure.

Washington, D. C.—The firm name of J. H. Chesley & Co., No. 1004 F Street, has been changed, to facilitate business, to Rudolph, West & Co., making more prominent the names of the partners, who have built the business to its present magnitude.

Waterbury, Minn. — J. W. Smart has moved his business to Wessington Springs, S. D.

Waterloo, Iowa.—Rohenkohl & Newton succeeded by Rohenkohl & Felton.

Westport, Conn.—E. B. Wilcox; succeeded by F. W. Jaynes.

Windsor, Can.—The new brick warehouse to be occupied by Morton & Christie, Hardware dealers, will be erected very soon by Mayor Davis in the rear of his Sandwich Street block.

Withee, Wis. — Thos. Jesperson sold to John Christenson.

Business Embarrassments.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Baltimore, Md.—The Keen & Hagerty Mfg. Co. has been incorporated to manufacture tinware and other metal goods. Incorporators are J. S. Hagerty, L. C. Wagandt, J. R. and J. V. Hagerty. Capital stock, $250,000.

Cheshire, Mass.—The Oakman Mfg. Co., of Boston, will begin operations for the manufacture of blown and pressed glass, utilizing the old brick works plant for the purpose. The company organized with Wingate P. Sargent, of Boston, president; James R. Powers, secretary; William Baldwin, treasurer; Samuel Oakman, of South Boston, superintendent. About fifty hands will be employed at first, but eventually the company can use 100 hands.

Denver, Col.—The Pettengill Powder Co. has been incorporated by George D. Kimball and others, with a capital stock of $400,000. They intend operating in Colorado, Arizona and New Mexico, with principal offices in Denver.

Girard, Ill.—Gravity Lock Co. has been incorporated to manufacture Gravity Locks patented by Henry W. Teal, who, with two others, are the incorporators. Capital stock is $10,000.

New York, N. Y.—Hartley Mfg. Co., of New York City, is incorporated to manufacture wire-ring cloth. Capital, $50,000. Directors: Philip Herbst, Cecil Hartley and Harry Mack, all of New York City.

New York, N. Y.—The Air Lighter Co. of New York City is incorporated with a capital stock of $800,000; to manufacture gas tips and burners. Directors: Gustav L. Jaeger, Claude A. O. Roselle, Frederick Falz, G. Osgood Andrew, John J. Roach, William C. Taylor and Wilson P. Marchbank.

New York, N. Y.—The Donaldson-Brown Co. has been incorporated with a capital of $10,000, to manufacture and deal in gas fixtures, etc. The directors are as follows: Joseph Donaldson and C. E. Brown, of Elizabeth, N. J.; T. H. Brown, of Brooklyn; Clinton Van Vliet, of New York, and Edward Morehouse, of Orange, N. J.

North Tonawanda, N. Y.—The Niagara Radiator Co. of this place has been reorganized with Charles F. Walthers, president; John Sedgwick, secretary and treasurer. The capital stock of the company will remain the same as formerly. This company has been operating its works but very little during the past year, and it will be good news to many to know that it intends to resume business. When running on full time it employs about one hundred men.

Portland, Me.—The Atlas Tack Co. has been organized at Portland for the purpose of carrying on the business of manufacturing all varieties of tacks, bolts, etc., with $700,000 capital, of which $300 is paid in. The officers are: President, Henry N. Rice, of Boston; treasurer, Joshua D. Upton, of North Reading, Mass.

South Corinth, N. Y.—A contract for the construction of a novelty factory at this place was closed recently. Dr. Carroll E. Gates is at the head of the enterprise. Work will be begun at once. Hardwood novelties will be made from beech, birch and maple, which are plentiful in that locality. A company of capitalists will build the factory. Dr. Gates holds the patents for the novelties to be manufactured. About 200 men will be employed. G. W. Edwards is the senior member of the concern.

St. Louis, Mo.—The Schwerdtmann Toy Co. has been incorporated by Marie A. Schwerdtmann and others to manufacture toys and specialties. Capital stock, $5000.

Stryker, Ohio.—E. G. Bencler has just established a shop at this place, for the manufacture of large steel tanks and patent post-hole diggers.

Waynesboro, Md.—As the citizens' committee of this town purpose forming a stock company for the purpose, with a capital of $50,000, there is a strong probability that the new tool works of Landis Bros., recently destroyed by fire, will be rebuilt here.

Westfield, Mass.—The H. O. Sprague & Son Co. is incorporated with a capital stock of $10,000. Officers: Henry L. Sherwood, president; Charles S. Axtell, vice-president, and James T. Case, secretary and treasurer.

Winchester, Ind.—The American Mfg. Co. has been incorporated for the manufacture of tinware and wooden articles. The directors are B. F. Hill, C. W. Moore, Nelson Pegg and J. W. Thompson. Capital stock, $125,000.

Improved Conditions.

Bridgeport, Conn. — Wilmot & Hobbs Mfg. Co., manufacturers of stove trimmings, are running their works to their fullest capacity, having so many orders for nickel steel top bands for ranges and parlor stoves.

Charlton City, Mass.—George N. Prouty, the wire manufacturer, is putting up as an addition to his establishment, a new 1½-story building, to be used for the manufacture of wire ferrules, such as are used on brooms, agricultural implements and for other mechanical purposes. The building will be 40x50. Mr. Prouty recently purchased the business of a concern manufacturing these ferrules, near Boston, and has removed the machinery to this place.

East Bristol, Conn.—The shop that Franklin Downs has been building here on the site of the old ivory shop is almost ready for the machinery. The shop will be leased by a stock company that will manufacture bicycle bells and novelties. The bell to be manufactured is protected by patents issued by E. D. Rockwell and C. A. Treadwell.

Elyria, Ohio.—The factory of the Western Automatic Machine Screw Co. is employing about one hundred men. This is one of Elyria's old reliable stand-bys. Considering the number employed and the few long "shut-downs" which it has experienced, none of our industrial institutions out-rank it in value to the city. Although the work is now largely in bicycle parts, a marked increase in other lines of work is reported.

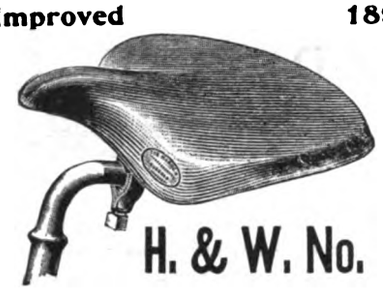
Humberstone, Ont.—As a result of the new tariff, the town is going to lose its chief mainstay, the Ontario Silver Works, one of the products of the natural gas belt. All orders for material have been canceled in the cutlery department, and as soon as the goods on hand have been completed the plant will be shipped to Muncie, Ind.

Kansas City, Mo.—The Great Western Stove Co. has purchased the ground immediately east of its plant, having a width of forty-four feet and running across the entire block. The ground has been occupied as a part of the bridge works plant.

Keene, N. H.—The plant and business of the Keene Mfg. Co. has been sold to the Union Hardware Co., of Torrington, Conn. The plant is situated at Marlboro, and manufactures skates, etc. It will be removed to Torrington. The capital of the Keene Mfg. Co. is $50,000.

Middletown, Conn.—The J. H. Chapman Co., manufacturers of saddlery Hardware, etc., have given out contracts for a new brick factory, to take the place of the one recently destroyed by fire. The building will cost about $25,000, and, it is expected, will be ready for occupancy by September 1.

Middletown, Conn.—The W. & B. Douglas Pump Co., which has been running eight hours a day and four days a week, are now running full time.



New Haven, Conn. — The Andrew B. Hendryx Co. announce that they have purchased the foundry and good will of Henry E. Preiss & Co., of this city, and are now prepared to supply bronze, brass, aluminum and white metal castings. Both members of the firm of Preiss & Co. have entered the employ of the Andrew B. Hendryx Co.

Waterbury, Conn.—The Mattatuck Mfg. Co.'s new building is soon to be the scene of extensive manufacturing operations. At the present time the new factory is being fitted up with the necessary machinery and in the course of a couple of weeks the work of making furniture nails will be begun. Automatic machinery will be used, the power to be derived through a stream of water. The new building, which stands on the site of the old shear shop, is a large and commodious one and will be in every way convenient for the work which the company desires to do.

Waukesha, Wis.—The Malleable Iron Co. is considering the question of building additions that would increase the capacity of the plant 50 per cent. The improvements contemplated include an addition to the foundry building, 100 feet long, an addition to the furnace building, 50 feet long, a new annealing furnace, etc.

Litchfield, Conn.—The Litchfield Mfg. Co. has been organized to manufacture sporting goods, wood turning, etc.

Mason City, Iowa.—Paine & Buirge, bicycles, will open up new store for the sale of bicycles. They will handle the Ide and Patee wheels.

Montreal, Can.—J. A. Pitts, bicycles, has commenced business. He is agent in Canada only for the "Howard" bicycle, manufactured by the E. Howard Watch & Clock Co.

Putney, Vt.—E. S. Munger has taken the agency for the Columbia and Hartford bicycles.

Pottstown, Pa.—The Modern Age Bicycle Co., will locate its plant here. The officers of the company are: President, James P. McNichol; secretary and treasurer, W. F. Wilkins; manager, H. D. Boeyer. The company has purchased the plant of the Pottstown Nickel Plating Co., and commenced operations May 1st.

St. Johns, Que.—J. C. Racicot, jewelry, has added a line of bicycles.

Temple, Tex.—Simkins & Martin, bicycles, will be continued under same name by I. D. Martin.

Wadena, Minn.—E. B. Benedict, bicycles, will enlarge bicycle factory and repair shop by new addition.

Washington, D. C.—B. F. Guy & Co., stoves, ranges and furnaces, No. 1005 Pa. Avenue, is preparing to take up bicycles, and is negotiating for the agency of the Old Hickory wheel.

Washington, D.C.—Peter Grogan, dealer in furniture and carpets, on Seventh Street between H and I Streets, has opened an agency for the following wheels: Fast-Flyer, "F. F."; Fast Flying Virginia, "F. F. V."; Druid, Suburban, Postal. The price has not yet been decided on, but the wheels will be sold on the installment plan. They are the product of the Maryland Mfg. & Construction Co., Baltimore, Md., according to Mr. Grogan.

Washington, D.C.—The New York Cycle Co., No. 434 Ninth Street, N. W., have opened an agency "for the sale of unredeemed bicycles." They offer Columbias, Syracuse, Pacers, Ramblers, Spaldings, March, Worlds, Flyers, Niagaras, Shirk, Liberty, Victors, and other makes, for ladies, gentlemen and children. They also exchange or buy outright, and take wheels for storage.

Washington, D. C.—The Uncle Sam Cycle Co., W. H. Waggoner, manager, have opened an agency at No. 610 F Street, N. W., and will handle the Uncle Sam at $40, $50, $60 and $80; the Fairmount, at $50 and $60, and the Reading Standard, at $60, $80 and $100.

Changes and Improvements.

Bridgeport, Conn.—Trustee A. J. Cable, the Liberty Cycle Co., was granted permission to continue the business by Judge Tallmadge of the Probate Court. This is good news for the workingmen employed.

Bridgewater, S. D.—William Savage, Hardware, sporting goods, etc., has removed to new quarters.

Butte, Mont.—R. C. Howell & Co., bicycles, reported to have been succeeded by A. J. Daren.

Chicago, Ill.—Geo. G. Spencer, sales agent for manufacturers of nails, seamless tubes, handle bars, bicycle forks, etc., Rookery, has removed to Royal Insurance building, No. 165 Jackson Street.

Columbus, Ohio.—Manu. Schmidt & Co., bicycles, etc., succeeded by Longstreth, Schmidt & Co.

Hartford, Conn.—Gardner & Kibbe, bicycles, reported to have been succeeded by W. E. Kibbe.

Kasson, Minn.—Howell & Shaver, bicycle repairers, have moved into Stout's building.

Madison, Wis.—Miller & Crook, manufacturers of bicycles, reported to have been succeeded by Harry L. Hall.

Pasadena, Cal.—George H. Frost, bicycles, succeeded by A. C. Herrick.

Philadelphia, Pa.—Blasius & Sons, pianos and organs, have added a new bicycle department. They make a specialty of the famous World wheel.

Riverside, Cal.—Geo. F. Seger, who recently purchased the Hardware and bicycle business of W. P. Lett, has leased the room in the Cosmopolitan building, until recently used as a restaurant, for a cyclery. He has a crew of men at work there fitting the room up, and when contemplated improvements are completed it will make by far the best cyclery establishment that has ever been fitted up in this city. Col. Bill Stuhlman, who knows all about wheels, will be in charge of the new establishment, which will be supplied with dressing rooms, shower bath and all modern conveniences usually found in up-to-date establishments of the kind.

Riverside, Cal.—W. S. Collins, bicycles, succeeded by Collins & Noble.

Sheperdstown, W. Va.—The Sheperdstown Specialty Mfg. Co., bicycle chain works, will increase its capital stock and the capacity of its bicycle chain factory.

Terre Haute, Ind.—Griffith & Miller, sporting goods, succeeded by V. N. Griffith.

Recent Embarrassments.

Anderson, Ind.—Anderson Bicycle Wheel Co.; J. H. Terhune appointed receiver. It was incorporated February 27, 1896, with a capital stock of $150,000, of which $100,000 was issued.

Cherokee, Iowa.—Shardlow & Baker, bicycles, etc., reported to have made an assignment.

Cleveland, Ohio.—U. S. Bicyclists Protective Co., reported to have appointed receiver.

Washington, D. C.—William W. Herron, bicycles, reported sold out by marshal.

Recent Fires.

Indianapolis, Ind.—Mueller & Watson, bicycles, damaged by fire.

Tipton, Ind.—The Laminated Steel Tube Co., manufacturers, destroyed by fire—not insured.

Bells.

The bells of the ball on her escort leaned,
And so very happy the dear girl seemed,
That he took her aside to a cozy retreat
And told her the story that's always so sweet.

She perked up her lips, so enticing and fair,
And his own were reaching the heaven that's there,
When she said, "Dear boy, this is only a sell.
You'll first have to buy me that 'Climax' bell."

The new 1897 model "CLIMAX" Bell possesses without doubt the most improved Lock Clamp known. Can be adjusted to the Handle Bar quickly without removing the screw, thus saving all vexatious worriment in the operation, and at the same time presents a more attractive appearance than any other kind of an attachment.

We have just published a handsome little booklet to be carried in the vest pocket, containing lots of valuable information for the benefit of wheelmen. Send us a two-cent stamp and we will mail you a copy.

BICYCLE REPAIR WORK.

THE WATERBURY
FARREL FOUNDRY
AND MACHINE CO
WATERBURY, CONN. U.S.A.

We have selected a few cuts from our Pamphlet of Miniature Illustrations, and have classified them in a series of small circulars, viz.:
No. 1. Rolling Mill Machinery for sheet metal.
No. 2. Tube and Wire Mill Machinery.
No. 3. Silverware and Coining Machinery.
No. 4. Hardware and Brass Goods Machinery.
No. 5. Bicycle Machinery.
If you are a manufacturer of sheet metal articles you are naturally interested in new machinery, and it will cost you only a two-cent stamp to request us to forward any of the above circulars.

CHICAGO.

"BEYOND CRITICISM."

Wm. Jessop & Sons, New York. [*Steel manufacturers*]: Another five years as proportionately successful as HARDWARE's last will place it almost beyond the criticism of friends or competitors.

"IN YOUR COLUMNS FROM THE FIRST."

Van Wagoner & Williams Hardware Co., New York and Cleveland. [*Hinges, Anvils, etc.*]: Having been represented in your columns almost from the first issue, we have a feeling of pride and pleasure in your achievements.

"WELL PLEASED WITH IT."

Jacob Schmitt, Louisville, Ky.: I am very well pleased with your paper, and find some very interesting reading in it.

"INTERESTING AND INSTRUCTIVE."

Strong, Bush & Handwerk, Joliet, Ill.: Your paper is very interesting and instructive.

"IMPROVES AS IT GROWS OLDER."

Geo. P. Crans, Brooklyn, N Y.: HARDWARE improves in quality as it grows older. I am well pleased with it.

"TOO VALUABLE TO BE WITHOUT."

Charles T. Mitchell, Baltimore, Md.: HARDWARE is too valuable to be without.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

CRONK'S

Combination Fencing Plier.

This newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same heft as the 1½ Maydole Hammer, and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12.00. Dis. . . .

ANY DEALER knows that a Stove Polish which other manufacturers try to imitate, is the Polish for him to sell. The enormous sale of

Enameline
The Modern Stove Polish

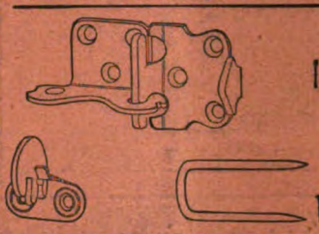
Proves that dealers are friendly to it, and that consumers will accept no substitute for ENAMELINE. Why? Because it's

THE BEST!

"THE SURVIVAL OF THE FITTEST."

At the GRAND AMERICAN HANDICAP held at Elkwood Park, Long Branch, N. J., March 24 and 25, 1897,

U. M. C. PAPER SHELLS TOOK THE HIGHEST HONORS.



The Hon. Thomas A. Marshall, of Keithsburg, Ill., was the only contestant out of 134 shooters facing the traps who made a clean score of 25 birds. . . . . .

HE USED U. M. C. TRAP SHELLS.

Of the remaining 33 other prize winners, 27 used U. M. C. SHELLS. The result of this contest speaks volumes for the quality of U. M. C. Goods.

A sample of the kind of shell used by the winner of the first prize will be sent upon application.

A GOOD THING.

IT'S IN THE TEETH.

The Patent "REFORM" Curry Comb is composed of three shallow, oval trays, with corrugated edges. The parts are struck up from a fine grade of cold rolled steel, heavily tinned and bronze lacquered, firmly riveted together and warranted not to rust. The outer dimensions are 6½x4¼ inches and by reason of the large cleaning surface and peculiar arrangement of teeth, the comb will do its work with a large saving of time and labor, cleaning with equal thoroughness both long and short coats. There are no places to accumulate hair and it will not tear or injure the brush, the comb being quickly freed from accumulation by giving its face a gentle tap.

The Value of Reputation

[*Address of J. D. Moore, before Southern Hardware Jobbers' Association, Savannah, May 12th.*]

"When we think of Cutlery, what names come into our mind as a synonym?—Joseph Rodgers and Wostenholm; when we think of Shovels, Ames; of Hoes, D. & H. Scovil; of Pistols, Smith & Wesson—and all through the line, where the manufacturer has made a reputation of which he is proud, it has been upon the question of quality, and not upon a question of price, and if we can educate our salesmen to talk quality, tell the people that they represent a house that desires to sell goods of merit, this will help us to establish a good reputation and correct very largely the evil of low prices, and we will learn very soon that it is not altogether the price that controls the order."

IS A GOOD ONE.

Morgan & Wright, Chicago, Ill. [*Bicycle Tires*]: There can be no question about the advisability of using the Hardware trade as a means of disposing of bicycles and bicycle parts, and as to the efficiency of HARDWARE, we can only say what we would say in reply to an inquiry from any other publisher, i. e., we have no direct means of knowing whether our "ads" do us good or not. If we insert an "ad," it is on our judgment that the publication is a good one.

HARDWARE

VOL. XV. JUNE 10, 1897. NO. 5.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 143 CHAMBERS ST., NEW YORK.

BRANCH OFFICES: CHICAGO, - - - - - ASHLAND BLOCK.
BOSTON, - - No. 33 EQUITABLE BUILDING.
CINCINNATI, - - - No. 316 VINE STREET.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

JAMES H. KENNEDY, - Editor and Manager.
HENRY HOPKINS, - - Associate Editor.
FRANK REIFSNIDER, - Western Manager.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

Editorial Trade Review.

The weather during the last two weeks has not been of a character to stimulate sales in the wholesale centres, as it has lacked that increasing warmth which usually characterizes this season of the year, and has consequently checked the purchases in many special lines which are customarily busy at this period.

The business transactions of the country as to volume are shown more clearly in the clearing house reports of the principal cities, and while those for the month of May indicate a more favorable state of affairs than existed a year ago, the increase is scarcely noticeable, being less than two per cent.; while compared with May, 1895, a positive decrease of fourteen per cent. is evident. This gives evidence of a too conservative condition of commercial movements generally, of which the Hardware business has known its proportion.

The industrial disturbances, which on account of reduction in wages and resulting strikes, are noted all over the country, bid fair to make a very unfavorable condition of business during the ensuing summer, especially in the iron and steel departments of our progressive industries.

The agitation of trust possibilities in a few lines, notably that capable of controlling the Wire Rod market, affecting as it naturally would, the entire nail market with special force, has had the effect of strengthening the prices of a number of commodities on which the profits have been light or entirely absent; and to this extent the agitation has increased sales among the local jobbing trade throughout the States. It is doubtful if a control can be obtained of so extensive an industry as that of Wire Rods, embracing as it does several companies possessing almost limitless resources for the prosecution of a successful business; companies that would need an extensive output to utilize their enormous plants, rather than prohibitory prices with a hesitating market. Production is being cheapened so greatly by these larger producers they are no longer satisfied with the trade of the United States alone, but are stretching forth their ambitious hands to reach those of every commercial nation susceptible to low prices. The times are no longer favorable for trust conditions which are too apt to produce prices founded on cupidity instead of on a demand and supply backed by industrial economy.

At Last the Dawn Approaches.

The season now passing is beginning to be regarded by intelligent observers as the last dying echo of that period of uncertainty which has handicapped the Hardware trade of the country, and made the volume of business in that line since election a disappointment to many.

With the settling of the tariff question on some solid basis, that can be relied upon to run during the continuance at least of the present administration, a stimulus will be given to commercial transactions that will prove a stepping-stone to a future of promise, and bring in its train a larger volume of steady business, with the prospect of a fair percentage of profit.

Signs of that improvement in our industrial future are even now visible in many parts of the country, accompanied, too frequently, by strikes and other disturbances from workmen who are zealous in their demands even before the fogs of depression have been lifted from the fields of labor, and the manufacturer can know for certain that the wheels have not b en moving simply to keep his hands together and enable them to pay up their local indebtedness. In many localities the progress to prosperity will be more moderate than in others, and it behooves the restless worker to go slow, as we will all profit more greatly under a general revival than an improvement noticeable only in spots.

The railroads begin to show increased earnings, and in the improving of their equipment generally show greater signs of life than have been visible in several years. Money continues abundant in all the trade centres, only awaiting a profitable employment to enable those with big enterprises on hand to obtain what is essential for their needs, at low rates of interest.

An increase in the facilities for production among our manufacturers is visible on every hand. Old plants rendered valueless by the new and improved machine y invented during recent years are dismantled only to be improved; new processes take the place of those that have become obsolete, by which a more economical output can be assured and dividends anticipated.

The recent announcement from government sources that our exports of manufactures from the United States, during the month of March, top the record, by being "the largest exports of manufactured commodities for any single month, the percentage of manufactures to gross exports being largely increased over the previous high record of over twenty-

Digitized by Google

six per cent.," inspires the country with the fervent hope that this happy state of affairs will continue indefinitely, and the year 1897 establish a new record worthy of future emulation.

After the usual summer dullness, there will remain but little doubt that we are steadily occupying the vantage ground of commercial advancement, from whence for years there will be no retreat. With markets opening in every direction for our ambitious productions, with idle capital awaiting investment, that can be relied upon to back up any project, no matter how vast, that presents an honest front with possible gain; with our merchants and manufacturers all standing shoulder to shoulder for the advancement of that future prosperity we have hoped and longed for, let us hope the future will be freed from the blighting influence of those combinations and grasping trusts which strangle the multiplying industries demanded by the markets of the world, and stultify the greatness of our commercial relations, in the interest only of a speculative cupidity always detrimental to legitimate traffic and fatal to a nation's industrial supremacy.

Surface Indications.

In their last weekly review of trade, R. G. Dun & Co. state that "in amount of defaulted liabilities the month of May was the smallest since September, 1895; in manufacturing liabilities the smallest since November, 1895, and in trading liabilities the smallest except the last month, since September, 1894." They add also:

"The statement that, except for the temporary depression in prices, the volume of business transacted is now larger than it was in 1892—the year of greatest prosperity—has been questioned by some. But a comparison of prices this week in the leading branches of manufacture not only confirms that view, but shows a remarkable similarity to the course of prices in the earlier months of 1879, when the most wonderful advance in production and prices ever known in this or any other country was close at hand. The key of the situation is the excessive production of some goods in advance of an expected increase in demand. So in 1879 consumption gradually gained, month by month, until suddenly it was found that the demand was greater than the possible supply. All know how prices then advanced, and the most marvelous progress in the history of any country resulted within two years. Reports from all parts of the country now show that retail distribution of products is unusually large and increasing."

These unmistakable signs of a returning vitality to all branches of trade, are of a tenor to impart confidence to the mercantile fraternity, and make them feel that separated possibly by a few months only is a volume of business that will tax our industrial resources to their utmost.

The Sidney Steel Scraper Co., of Sidney, Ohio, have published an attractive leaflet, in illustration of their extensive line of solid pressed steel tray wheelbarrows, mounted on their wood or tubular iron frames, all complete with steel spoke wheels. They are also manufacturers of drag and wheel road scrapers, contractors or road plows, truck and baggage barrows, garden barrows, etc.

The Winton Motor Carriage gave an exhibition mile against time at Cleveland, during the races on Decoration Day, making a mile on a circular track in one minute and forty-eight seconds, breaking, it is said, the world's record.

Heard And Seen At The Club.

An honored member of the Hardware Club was relating his experience with the grip: "The doctor prescribed whiskey," said he, "and as I was flat on my back, my wife was compelled to give it to me with a tablespoon. As I smacked my lips after the first dose, she looked at me suspiciously, and said, 'Why, father, *I believe you like it!*'"

"And how long have you been married?" asked one of the listeners.

"Thirty-four years."

"And never gave it away in all that time!" was the comment of the crowd.

"When I was out West," said the maker of tools, "a young man registered at the hotel, and set in to make things lively. The first night, he played poker with the landlord, and cleaned him out; the next night, he came home drunk, and whipped the cabman; the third night, he went up and down the halls, singing at the top of his voice, and daring the chambermaids to come out and embrace him. In the morning, they asked for the key of his room, and gave him his bill. He looked it over, and then said, with surprised pathos, '*Don't you make any discount to ministers?*'"

"We had a young preacher in our pulpit," said another, "out in New Rochelle, and he was explaining the greatness of the Creator, in both small things and large. Said he, 'When God made the great mountains, He made the little hills. When he made the ocean, He made the dewdrop. When he made the whale, He made the minnow. When he made *me*, He made a daisy!"

"Speaking of preachers," said one of the three handsome club governors, "reminds me of the colored pastor who met one of his deacons going home at midnight with a bag of chickens on his back. Said he, sternly, 'Deacon Jones, where you git dem hens?'"

"I stole em."

"Yes, but *where* you stole em?"

"What's dat to you?"

"Brudder Jones, is you so mean dat you won't put your poor old pastor on?"

There is a member of the club who is young in years, but is already the active managing head of a large retail and wholesale Hardware establishment. He was relating an experience, the other day: "I was standing near two clerks, who did not see me. The younger asked the other—who was ten years older than myself—in regard to a special discount. Said he in answer, 'I don't know. Ask the old man.'

"I wondered who he could mean. The clerk seemed to know, for he put straight to the office, and asked for me.

"Was I offended? Not much. It was the proudest moment of my life. No man is ever 'the old man' about a store, unless he is respected and liked. It means power, appreciation, respect. When a man of my age earns that title, he ought to feel happy enough to go out and throw roses at himself."

Although James D. Foot was afar across the briny deep, his visible presence was felt in the club rooms, each hour of the day. The fragrant products of his greenhouse in New Rochelle are still found upon the table in the foyer, and brighten the club rooms with their beauty and fragrance. One may do a great deal of good, and give much pleasure, in this world, if, like Mr. Foot, he sets out to find a way.

Through the efficient labors of the library committee, a frame containing the daily weather reports, has been put up in the main hall.

Digitized by Google

SOME VIEWS FROM AN ANCIENT.

Editor Hardware: There was a Hardware salesman from New York, who came over to see me the other day, who was the worst specimen of an indigo bag I ever saw. Blue! That was no name for it.

He left a dull, leaden hue in the whole neighborhood.

Did he sell me any goods?.

He did not.

He said the country was going to the devil. He cursed McKinley and his administration. He was for free silver, free trade, free lunches—anything different from the things that are. He ran the whole country down, from Maine to Texas—and when he got me into his frame of mind, he pulled out his samples, and with a sigh, set out to sell me a bill of goods.

I said to him: "Young man, why should I take on any more of a load, when the whole outfit is going to smash? No, sir! I feel more like shutting up shop, paying a cent on the dollar, and going into politics."

Even then he blamed the country, rather than himself, because he did not make a sale.

Don't send me any more boys of his build, Mr. New York. I like a salesman who comes in with a smile, a new story, a fund of heartiness—such fellows as J. E. Sleight, George B. Main, Howard Beach, Harry Hopkins, E. Bertram Pike, or Joe Limeburner.

God bless them, and their whole connection. They are traveling sunbeams.

It don't do for anyone, especially one who is selling goods, to tell all he feels and knows. Something should be kept in reservation. I have a grandson who illustrates the point.

A man drove up to the store the other day, and hailed me with: "I hear your son has a hoss to sell?"

"Yes," said I, "he has a fine little bay mare he would part with."

"Fetch her out," said he.

We went back to the barn, followed by five-year Jim, my grandson. The mare was brought out, and the visitor was quite taken with her. He asked her age, looked her over, found out the selling price, and then asked, "Any bad habits?"

"No," said I promptly.

Young Jim stood with his hands in his pockets, his legs apart, his hat on one side. As I answered, he looked up, and in a shrill voice, exclaimed:

"*She balks!*"

"She does, sonny?" said the man. "That's a good boy, always tell the truth."

"The kid don't know what he is talking about," said I. "Sometimes she shies, and that's what he means."

Young America turned an indignant eye on me. "Now, grandpa, you know she does. Didn't dad build a fire under her to make her go?"

The stranger patted him on the head, and gave him a nickel.

"You don't want her?" I said.

"No, I don't think I do."

I said nothing to the boy. He will know more when he is older.

Here is the moral for salesmen: Tell nothing but the truth, but not all of it.

There is a painter in our town who is not very bright, but who occasionally stumbles on the right thing. The other day the General, whose past is shady in spots, was holding forth at a great rate, on the porch of my store.

"Paint, Thomas," said he, "is a great hider of weak spots. It covers the rust, evens up the rough places, fills the cracks and knot holes, makes the old look new, and hides the blemishes from the human eye. In work like this, Thomas, you are a deceiver, and yet a necessary evil."

"Yes, General," said Thomas, slowly, "don't you want me to go over your reputation?"

Here are some maxims for clerks that I have studied out, in a long course of business:

Never do to-day, what you can shove off on a fellow clerk tomorrow.

Keep at the back end of the store as much as possible, so that the other boys will have to wait on customers.

Always keep a novel under the counter, to catch up when the old man is out.

Keep your eye out for a soft snap.

Don't do any more work than you are paid to do.

Be the last one to come in the morning, and the first to leave at night.

Don't do a thing outside of your prescribed duties.

Find fault with your place and salary.

Show up the weak points of your establishment to the clerks of other houses.

Be as snappy with customers as you dare.

Tell your fellow clerks all the things you hear against the boss.

Threaten to leave, whenever fault is found with you.

Believe that the world owes you a living, and act on that belief.

If the above rules are strictly followed, you will be out looking for a job in about thirty days from date.

I have a clerk who insists on smoking cigarettes upon every possible occasion. Will some one tell me what I should do with him? A. N. OLDMAN.

The New Club Manual.

At the request of the Board of Governors of the Hardware Club of New York, Alfred D. Clinch again undertook the difficult and trying task of preparing a manual for the club for 1897. The work has been completed and published to the unqualified satisfaction of the officers and members of the club. The constitution as amended up to March 20, 1897, appears in full, and the by-laws, house rules, articles of incorporation, etc. With his usual close application and exactness, Mr. Clinch has prepared a list of the resident and non-resident members, with the names of the concerns with which they are connected, and also a list of the members who have passed away. The total of membership up to April is shown to be 685, of which 570 are resident, and 115 non-resident. The book is nicely printed on good paper, and is bound in green cloth with the club monogram on the outside cover. The club is certainly under obligations to Mr. Clinch for the care and ability he has shown in the preparation of this work.

The second annual meeting of the Michigan Hardware Association will be held at Battle Creek on Wednesday and Thursday, July 14–15, 1897. Every Hardware dealer in the State is cordially invited to attend. An excellent program has been arranged and papers of importance to the Hardware trade will be read by some of the leading dealers in the State.

The Putnam Horse Nail Co.

As will be seen by reference to our Prices Current, an important change in quotations has been made by the Putnam Nail Co , of Neponset, Boston, Mass., their discount being 25% instead of 15% as heretofore. We are informed by the company that this action is the result of a controversy, extending over some time, with representatives of the larger jobbing houses of the country, who are not satisfied with the system of prices to which the company have adhered. The claim of the jobbers is that these prices do not offer them sufficient protection, the more especially as they were not in position to sell the small jobbers at what they considered a reasonable margin of profit. They accordingly made efforts to persuade the company to make terms which would be more favorable to themselves; the company, instead of doing this, have thought best to make the change above referred to in the interest of the smaller trade. An announcement made by the company will be found upon page 63 of this issue, and the subjoined communication from the treasurer of the company will throw further light upon the subject. The company announce that for the convenience of the trade west of the Rocky Mountains a stock of goods will be carried in San Francisco, which will be offered at the price above quoted. The communication to which we refer is as follows:

THE HARDWARE JOBBERS AND PUTNAM NAILS.

Editor Hardware: The contest that is now going on between the large jobbing houses of the country, associated under the name of the National Hardware Association, and one of the large manufacturers of the country, namely the Putnam Nail Co., as to the method of the disposal of their goods to the trade, must be of intense interest to all of the local jobbers throughout the country.

It is an attempt on the part of the Association by cooperation of its members, to either force the company to so dispose of their goods as to secure the large jobbers a 15 per cent. profit between them and the local jobbers, or else to refuse to handle Putnam Nails entirely.

Although there has been so far as known, no joint official action by the Association, still, nevertheless, by correspondence and otherwise, the purpose is manifest, inasmuch as many members of the Association have signified their determination to join hands to effect their object, that is, to force the company to so regulate their quotations as to secure to the large jobbing trade the 15 per cent profit before mentioned.

Now, it is evident that a great principle is to be decided by the success or failure of this effort on the part of the National Hardware Association.

In years gone by, it has been absolutely necessary that the large jobbing trade should handle the goods of the manufacturers, and that they should be the great distributing agents to the local jobbers throughout the country, but of late years the large jobbers have prevailed upon the manufacturer to deliver their goods directly to the local jobbers, thus saving the large jobbers the heavy expense items of handling, storage and freight, and putting upon the manufacturers the burden of carrying the stock formerly borne by the legitimate jobber. This method of the manufacturers delivering to the small local jobbers, has brought about business relations between the manufacturer and the local jobbers, and they are now seriously asking the question, why there should be a 15 per cent. profit between them and the manufacturer, when the goods come directly from the manufacturer to their store.

The situation now is simply this: Will the local jobbers throughout the country sustain the position taken by the Putnam Nail Co., and place their orders directly with the manufacturer? The issue is momentous in its consequences, to both the local and the large jobbing trade. If the large jobber can succeed in forcing the company to withdraw their favorable quotations from the local jobbers in this instance, it will go a long ways towards bringing about, and establishing the principle, that the manufacturers must recognize the large jobbing trade, and give them a large portion of the profits, which really of right belongs to the smaller jobber. Will the local trade arise to the importance of the occasion by sending in their orders direct to the Putnam Nail Co., and thus encourage them in this battle royal with the National Hardware Association?

Of course, every one knows that this is not a matter simply of the purchasing of horse shoe nails. A great principle is at stake. The outcome of it will decide whether the local trade are to come in direct contact with the manufacturers and thus receive a profitable margin in the disposal of their goods to the consumers, or whether they wish from this time on to be tied hand and foot and compelled to pay tribute to the large jobbing trade.

If this results in a victory to the Putnam Nail Co., other manufacturers will adopt the same principle, and the local jobber will receive a profit to which he is justly entitled.

The Putnam Nail Co. solicit correspondence from the trade throughout the country, and will gladly make them such quotations as will prove exceedingly profitable to them in the handling of Putnam Nails.

Boston, Mass., June, 1897.

"A Lesson on the Tiger."

The Stoddard Mfg. Co., Dayton, Ohio, must certainly be credited with advertising matter of a high grade, reflecting great credit upon that department of their extensive plant. In a recent issue we were pleased to note their handsome and artistic catalogue, which is far in advance of the usual manufacturers' catalogue of any special production; since which, we are in receipt of their 1897 show card, or hanger, which is entitled "A Lesson on the Tiger," and which is a faithful reproduction by lithography in twelve colors, of that masterpiece by Hans Dahl—the famous artist now known in the art circles of Europe—of the painting originally known as "On a Country Road in Norway." The use of it in this connection is of course to advertise the celebrated "Tiger and Tigress" wheels, manufactured by the Stoddard Mfg. Co. The picture is a work of art that would certainly be an ornament to any appartment in which it might be placed. We give a description of the subject:

"It is a winsome scene. It sets the beholder to smiling as if he were only another gay figure on the canvas. A rollicking young fellow of the city, off for a lark on a wheel, in the land of fiords and tow-headed and buxom girls, has come across a group upon the roadway. The story is as clear as the sky which the artist has painted. You can almost hear all the talk and the laughter which have gone on in that merry company.

"The wheelman has dismounted, and up into the saddle one of the jolly peasant girls has clambered. She is coasting unsteadily down the hill slope, with the wheelman holding her on one side and one of her companions on the other. About them, laughing and shouting, the rest of the bevy run, with their golden hair hanging down their backs, their eyes dancing, and their white teeth gleaming. At one side stands a yellow-pated youngster, wonder-eyed, watching the mad, merry show, and beyond, reaching to the clouds, rise the snow-crowned, multicolored mountains clear in the wonderful sunlight, like massive spectators of the sport. It is a wonderful picture from other standpoints than that of the bicyclist."

The Stoddard Mfg. Co. announce their willingness to send copies unframed by mail on receipt of twenty-five cents, or in a beautiful and appropriate frame, under glass, and handsomely matted, delivered at the express office, at a cost of one dollar.

FOREIGN CUTLERY AND THE TARIFF.

The following important communication carries its own explanation:

NEW YORK CITY, May 22, 1897.

The Finance Committee of the Senate, Washington, D. C.:

Gentlemen: We, the undersigned, desire to make a most earnest and emphatic protest in opposition to the complex system of duties, based on value, as incorporated in the Senate Amendment to the Dingley Bill on Cutlery.

It is claimed that the mixed duties prevent undervaluation. It is the very method that makes undervaluation easily possible. We claim to be honest merchants, and challenge the strictest investigation of our records, both inside and outside the Appraisers' Department, and in some cases our records cover a period of sixty years.

Prior to the McKinley Tariff the rates on Cutlery were purely ad valorem, and under that system cases of undervaluation were substantially unknown, because, in order to make any satisfactory gain, the undervaluation must naturally be so great that the risk involved deterred dishonest people from the attempt.

It has been shown to the Committee on Ways and Means that under the complex system of the McKinley Tariff on Pocket Knives, by an undervaluation of 5 per cent. only, a saving of 21 per cent. in the cost of the goods could be made, and by the same system under the Wilson Tariff, by an undervaluation of 5½ per cent. only, a saving of 16 per cent. in the cost of the goods could be obtained, and that these results could not be accomplished under a purely ad valorem system, representing the equivalent rates of duty, without undervaluations of about 40 per cent. and 31½ per cent. respectively, which would be easily detected, and incur tremendous penalty.

It has been demonstrated over and over again that the system of mixed duties on Cutlery, based on value, has the effect of putting the trade into the hands of unscrupulous men, and of driving honest men out of business, and this has been the condition ever since the inauguration of the system. To substantiate this statement, we appeal to the Appraisers' Department, and to the Board of General Appraisers. Therefore, by adopting such a system, the Government has, under the McKinley and Wilson Bills, been put into the unenviable position of backing up dishonesty, and the Senate substitute to the Dingley Bill proposes to continue the iniquitous plan.

The Dingley rates, dividing the different classes by number of blades, instead of by values, while absolutely prohibitory on the great bulk of Pocket Cutlery of all sorts, had this merit: They were not in favor of dishonesty. If they drove out of business the honest men, they would also drive out the dishonest men. We, therefore, submit that the only just and equitable method of levying duties on such goods as cutlery, where values vary many hundreds per cent. on same descriptions, is by purely ad valorem rates.

We understand the American manufacturers of Pocket Knives, before the Ways and Means Committee, contended for an average of 70 per cent. ad valorem, but submitted a misleading schedule, which was adopted by that Committee, and which, based on the importations for the fiscal year 1896, figures out an average of 137 per cent. ad valorem. The average ad valorem rate on Pocket Knives under the McKinley Tariff was 91¼ per cent., which resulted in a decrease of importations for the fiscal year 1894 of 70 per cent. from the imports of 1890, showing that these goods cannot stand any such excessive rates as were imposed by that tariff.

The average rate under the Wilson Tariff is 53 per cent., and, while giving ample protection to American manufacturers, has produced considerable revenue, and would have produced more, except for the ease it affords dishonest people to swindle the Government. There is no reason f r supposing that, if the rates proposed in the Senate Amendment, which average 99 per cent., should be put in operation, any different result would follow than under the McKinley rates, and it is quite safe to predict that any such rates as proposed in the Senate Amendment must prove an ultimate failure from a revenue standpoint. When it is understood that 85 per cent. of all Pocket Cutlery imported costs abroad less than $1.50 per doz., passing into the hands of consumers of small means, it will be seen that to levy the enormous rates proposed will prohibit the importation of these goods, and deprive the people who can least afford it, of the opportunity of supplying their wants, as the American manufacturers do not produce anything which can take their place.

While holding strongly to the opinion that an equitable ad valorem duty would best serve the purpose of the Government and honest merchants, nevertheless, if Specific Rates are insisted on, there is only one method of levying such rates, and avoiding the condition of undervaluation that has existed and grown ever since the inauguration of the complex duties, based on value, and that way is to follow the scheme of the Dingley Bill in taxing the number of blades. We therefore submit the following calculation, based on the imports of Pocket Knives for the fiscal year of 1896. This calculation averages 78½ per cent. ad valorem, is quite safe against undervaluation, and is the utmost the goods will bear without utter destruction of revenue.

Dozen.		Average Price Per Doz.		At Ad Val.	Per Doz.	
296,000	40c. per doz.	$0.26	$76,960	20%	$0.10	$44,092
	Value over 40 c. per doz					
48,000	1 blade	0 60	28,800	20%	0.40	24,960
392,000	2-blade	1.03	403,760	20	0 80	315,952
277.000	3-blade	1.27	351,790	20	0.80	291,958
254,000	4-blade	1 73	439 420	20%	1.00	341,884
1,267,000			$1,300,730			$1,019,746
						Equal 78½%

This schedule averages a specific rate of 60 cents per dozen. The McKinley schedule averges a specific rate of 43½ cents per dozen.

Table Cutlery, Carvers, etc. The most carful estimates indicate that only about 5 per cent. to 7½ per cent. of the consumption is imported, and these mainly on account of the reputation of the makers back of them. On all such goods the market price is well known, and no chance for undervaluation exists. These goods should, without question, be subject to an ad valorem rate only, and when we say that the American manufacturers have obtained from 90 per cent. to 95 per cent of the consumption under heretofore existing rates of 35 per cent. to 45 per cent., we think it must be patent to any one that this rate is sufficient for protection, and should be made lower if increased revenue is desired. As the proposed bill now stands, stag handle table knives and forks run up to 355 per cent.; rubber, bone and celluloid handles, up to 157½ per cent.; pearl and ivory handles, up to 145 per cent.; carving knives and forks, up to 175 per cent., which rates are, of course, absurd, from any point of view.

Scissors and Shears. These have never paid a higher rate of duty than 45 per cent., and this rate only during the past seven years. Prior to 1890 the rate was 35 per cent.,

Digitized by Google

and under this rate the American manufacturers have completely captured the market on shears, and large quantities are exported, some domestic manufacturers having their own agents and places of business abroad for the sale of these goods.

Ladies' scissors are imported to some extent.

There is no way of putting specific duties on these goods, except by value, and we think we have made the objection to this system clear enough. The complex rates in the proposed tariff bill average about 70 per cent., and would be largely prohibitive, on account of advancing the prices to such extent that people could not buy them. There is no warrant upon any ground for change from the present rate of 45 per cent.

Razors. There is no way of putting specific duties on these, except they are based on value, which carries the objection we contend against. The highest rate ever put on razors, except under the McKinley Act, was 50 per cent. ad valorem, and there is not just cause for any change from the present rate of 45 per cent., but as a revenue measure we reccommend the adoption of 50 per cent. ad valorem.

We close with a strong appeal to the Senate not to permit the adoption of any plan of duties that involves specific rates based on value, as being distinctly vicious, and encouraging immoral practices, and as being seriously detrimental to honest merchants.

We also urge that Sections 149 and 151 of the Tariff be amended so as to read as follows, and, the rates herein mentioned being amply protective to American manufacturers, and as high as the producing of revenue will allow, we protest against any schedules adopting higher rates than the following on cutlery:

"Section 149. Pen Knives or Pocket Knives, Clasp Knives, Pruning Knives and Budding Knives, of all kinds, or parts thereof, and Erasers, and Manicure Knives, or parts thereof, wholly or partly manufactured, valued at not more than forty cents per dozen, ten cents per dozen and twenty per cent. ad valorem.

Valued at more than 40c. per dozen, 1-blade, 40c. per dozen and 20% ad valorem.

Valued at more than 40c. per dozen, 2-blade, 60c. per dozen, and 20% ad valorem.

Valued at more than 40c. per dozen, 3-blade, 80c. per dozen, and 20% ad valorem.

Valued at more than 40c. per dozen, 4-blade, $1 per dozen and 20% ad valorem.

Razors and Razor Blades, finished or unfinished, of all kinds, 50% ad valorem.

Scissors and Shears, and Blades for the same, finished or unfinished, 45% ad valorem.

Section 151. Table, Butchers', Carving, Cooks', Hunting, Kitchen, Bread, Butter, Vegetable, Fruit, Cheese, Plumbers', Painters', Palette Artists', and Shoe Knives, Forks, and Steels, finished or unfinished, 35% ad valorem."

HARDWARE'S "Prices Current" are reliable.

Powder Wagons Proposed.

The city council of Saginaw, Mich., and the fire department and Hardwaremen of that city, are having some discussion of means by which the last named will be permitted to carry gunpowder in stock. Under the present local laws they are allowed to carry but twenty-eight pounds of gunpowder in stock and only seven pounds in any one package. They are accordingly compelled to have powder houses outside of the city, and the smallness of the amount kept in the stores makes it necessary to make frequent trips to the powder houses. This takes up much time and is a very great inconvenience. The reason that they are not allowed to keep more explosives in stock is that in case of fire the firemen are hampered in their work if they know that there is a quantity of gunpowder in the store liable to explode at any moment. It also makes fighting fire under such circumstances very dangerous.

It was suggested and agreeable to the committee and the dealers, that a new ordinance be passed allowing them to keep 150 or 200 pounds of gunpowder in stock, provided that it is kept in iron wagons on wheels on the sidewalk in front of the stores day and night. In case of a fire it would be possible for any one to wheel the explosive away out of danger at a moment's notice. The chief of the fire department told the committee that he had rather 250 pounds of gunpowder would be kept in stock this way than 28 pounds as at present scattered through the stores where the firemen are liable to collide with it at any moment during a fire. It was suggested that people in need of gunpowder might wheel the wagons away, but the Hardware dealers said that they would anchor them so that they would not be taken very far, and would attend to that part of the matter.

The Wisconsin Hardwaremen.

A meeting of the executive Committee of the Wisconsin Hardware Association was held at the Palmer House, Fond du Lac, Wis., on May 24th. It was called by President John Hughes, for the purpose of transacting important business, and deciding upon a date and place of holding the semi-annual meeting. The meeting was called to order by President Hughes, with the following gentlemen present: A. Noll, vice-president, Chilton; C. A. Peck, secretary, Berlin; W. H. Hay, treasurer, Oshkosh, and A. H. Sheldon, Janesville; C. E. Dewey, of Kenosha, and D. W. Ramsey, of Madison; the other members of the executive committee were unable to attend. It was decided to hold the semi-annual meeting of the association in Milwaukee, July 20. Mr. Peck, secretary of the association, stated that they had a present membership of 70, which was an excellent showing, considering the short period of its existence.

Bicycle Chain Lubricant.

The ideal lubricant should not only lubricate the chain and sprockets, but the pivots or pins holding the links of the chain also. Lubricants made from pure Flake Graphite are superior articles when properly made. An article combining a perfect lubricant and rust preventative, put up in convenient form, is something desired by every bicyclist. To all such, Dixon's Graphitoleo will be not only welcome, but indispensable. Dixon's Graphitoleo is a preparation of a very choice graphite finely pulverized, and a pure petrolatum warranted not to gum or become rancid. It is put up in collapsible tubes, and is manufactured only by Joseph Dixon Crucible Co., Jersey City, N. J.

A German statistician says that of every 10,000 chimneys three are struck by lightning, while of the same number of towers and wind-mills sixty and eighty respectively are struck.

Western Hardware Topics.

The cycle season is on in earnest, and it is the biggest cycle season on record. So general has the demand become for cycles, that almost every Hardware dealer has put in a stock. True, not every dealer is enabled to represent one or more makes exclusively, for the single reason that the makes wouldn't "go around." But at the present rate of people going into cycle manufacturing, by 1900 there will be enough makes to give everyone an opportunity to say, "I handle the best or the cheapest, and I am sole agent for it."

While at Columbus, recently, I looked through the records of the incorporation clerk. Of 200 records filed within a year, very nearly one-third pertained to bicycle manufacturing and its dependent interests. Add to these the great number of individual concerns or not incorporated companies, and you may get an adequate idea of what the cycle industry has got to be. Characteristic of this season's buying is that the demand centers on the better grades, from $75 up. Hard times don't go with the average cycle buyer. He wants the best for his money. And yet it was predicted that trashy wheels would rule the market in '97.

SUMMER SPECIALTIES.

The demand for summer specialties has never been better. Prices may be a little closer, but the buyers are on hand. Lawn and garden utensils, household refrigerators, sporting and outing outfits move very briskly, and the live dealer, with an assortment to suit and a reputation for handling reliable goods, knocks the persimmon.

The demand for wire goods, such as fly screens, mats, poultry netting and fencing is of good order and improving right along, and prices are well maintained. While the country buys as yet sparingly and to cover immediate wants only, even these movements are more satisfactory than they were a year ago.

Agricultural implements are still somewhat neglected, but the actual business therein will not develop before June. Buyers are holding off till the last moment, and dealers govern themselves accordingly. There is a good deal of speculation as so what this line will develop this season. It's been rather dull for some seasons past, but the growing confidence among the farmers will no doubt redound to the benefit of the trade.

WITH CONFIDENCE.

The local Hardware manufacturers and, for that matter, most manufacturers throughout the State, are looking upon the situation with unwavering confidence. I note that a majority of the plants are working full time; some of them are behind their orders. Stocks have been kept so low for several years posterior to the panic that plants can keep busy on producing stock without endangering their opportunities of placing it readily when normal conditions will again rule the market.

Builders' and plumbers' material is in good demand. There is a great deal of building and improving property going on at Cleveland, and much more is planned for speedy execution. In fact, the whole State is engaged in building and improving homes, and erecting modern commercial habitats. This unmistakable boom is due to the low cost prices which still prevail, but which another year might see doubled, or at least, greatly increased. This again shows that the people foresee better things in the near future, and are anxious to profit by the slump now.

HE SOLD HIS WHIPS.

A dealer in a Northern Ohio city was so stocked up with whips, and at the same time received such a tempting offer from a manufacturer he dealt with that he was at a loss what to do. Oh, yes, he would have told the manufacturer to go to hades with his whips, but his representative had so thoroughly ingratiated himself through long intercourse, that the dealer was loath to reject the offer. Anyway, he begged time to sleep over it. Great was his surprise when he arrived at his place of business at 10 A. M., the following day, and found the whole store crowded, some going, more coming, all carrying or talking whips. But presently the whip traveler issued from the crowd and buttonholed the dealer, simultaneously showing to him an ad. in a daily. "But holy smoke, I didn't authorize such an announcement," exclaimed the dealer. "I know you didn't, but I paid for it," replied the traveler, suavely, at the same time pointing to the crowd of whip buyers. The dealer perspired freely and almost collapsed when a few minutes later a stock clerk approached him with: "Entire stock of whips sold out!" Now, here's the ad.:

EXCLUSIVE WHIP SALE.

Largest Stock in the City.

The Best and The Cheapest.

ALL KINDS.

This morning, from 8 to 11, we are determined to close out the entire stock. Whip your friends into line. We have a surprise for you, and that's the price.——

Now, there's nothing extraordinary about this ad., but it fetched the buyers. The traveler had compounded a price on the dealer's stock which netted in the aggregate a very fair profit. Anyway, it was highly satisfactory to the dealer, for he could now avail himself of the manufacturers exceptional offer without worrying about it. In fact, he was so elated that he gave his employes and the traveler a supper at the best hostlery in the city. This shows that printer's ink is not only magnetic at all times, but magic sometimes. J. B. RINDFLEISCH.

Cleveland, Ohio.

William J. Knox.

William J. Knox, who has been connected with Chandler & Farquhar, of Boston, since the inception of the business, died at Lincoln, Mass., on April 24th, in the 29th year of his age. In the card announcing his death, the firm pay to him this deserved tribute: 'His position brought him in contact with nearly all of our customers, and his quiet and unassuming disposition made and retained them as his friends. By a studious application to the details of the trade he had acquired a knowledge of its affairs that made him an invaluable assistant to us, and we take this opportunity to express our appreciation of the sterling qualities of the man and our regrets that he should have been cut off in the midst of his usefulness."

In a recent issue, mention was made of the loss by fire sustained by W. W. Woodruff & Co., dealers in Hardware, etc., at Knoxville, Tenn. We are permitted to state the exact loss in connection with the fire. Their stock of goods amounted to about $108,000, on which they had an insurance of $70.500 They saved from the building before it burned about $15,000 worth of stock in good condition. They have cleared away the ruins, and think that they will save in a damaged condition about $10,000 worth, making a total saving of about $25,000. Taking this from the difference between their insurance, and stock of $37,500, will leave their net loss about $12,500. They are now rebuilding, and expect to be in their new quarters in about five or six months.

Kohler's Hardware Specialties.

F. E. Kohler & Co., Canton, Ohio, are manufacturers of about as large a line of useful specialties, sold by the Hardware trade, as any manufacturer we can call to mind; always on the lookout for useful novelties, they keep their desirable catalogue faced up with something new and important for each succeeding season. Among the best sellers among the many specialties in their recent catalogue, we illustrate a couple of useful tools that are having a large and extended sale, and which create a recognized demand from all parts of the country where they can be used. Fig. 1, shows their "Royal Saw Set," which is simple in construction and sure in operation, and possessing a number of novel features, makes it worthy of the consideration of Hardware dealers handling this line of tools. They are calculated to be used on either hand or band saws. Fig. 2 gives an illustration of the "Horse Nail Hog Ringer and Animal Marker." Horse shoe nails being made of the best quality of Norway iron, make a stiffer ring than the customary wire ring. The head of the nail being the heaviest part will always hang down from gravity, and thus keep the ring in the proper position in the hog's nose, leaving no points sticking out which are liable to make the nose sore. Horse nails are always kept in stock in any well regulated Hardware store, and no farmer need find it difficult to get rings suitable for this ringer. This is an admirable feature, and as the point clinches on the outside of the nose or ear the wound soon heals.

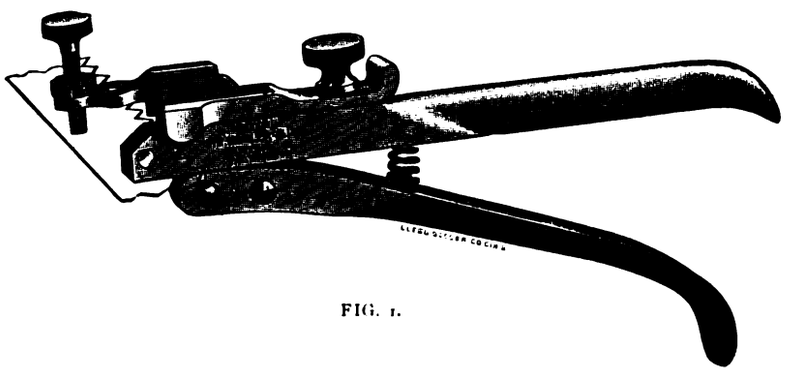

FIG. 1.

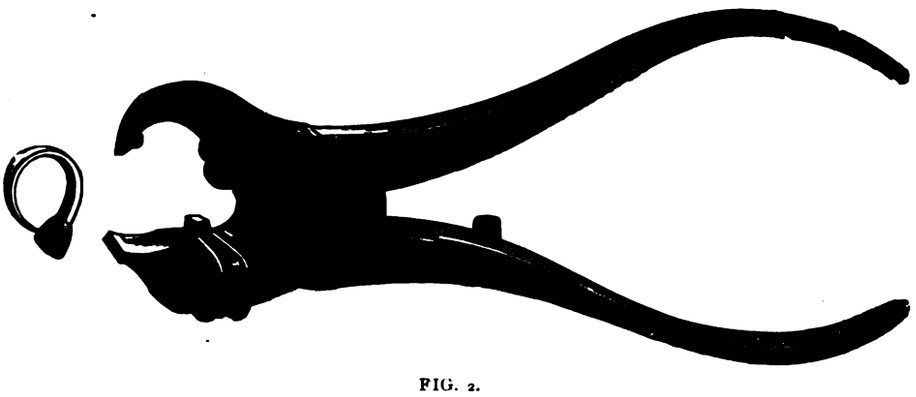

FIG. 2.

The Columbia Safety Dumb Waiter.

J. G. Speidel, No. 233 South 8th Street, Reading, Pa., has recently placed upon the market the Columbia Safety Dumb Waiter, constructed under his patents, and described by him as being "the most complete and satisfactory self-retaining dumb waiter possible to mechanical contrivance and skill." It is simple in its methods, can be set up readily by any carpenter in a short space of time, and being a self-contained machine will stay when properly adjusted. All sheaves and bearings are part of the main frame. The bearings require little if any lubrication, being either anti-friction roller bearings, or graphite lined brass bushings.

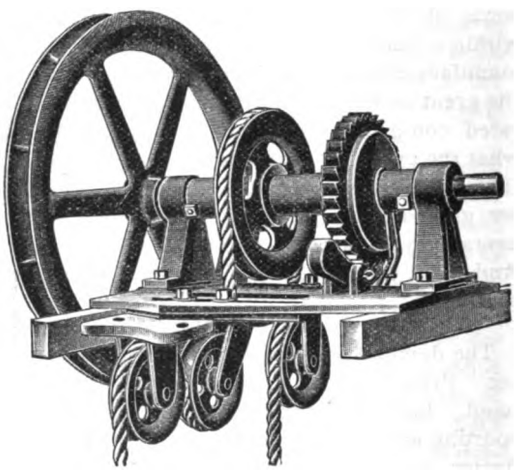

FIG. 1.

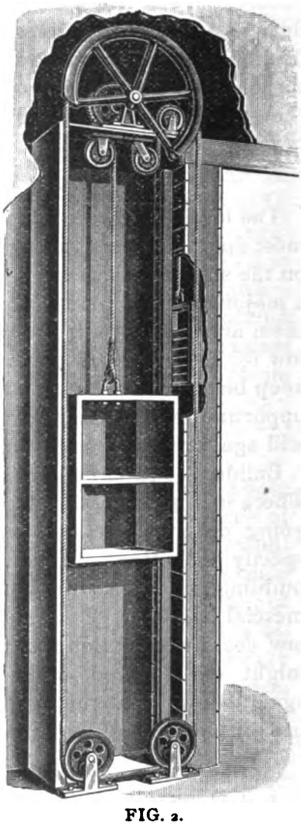
We illustrate below the mechanical features of this improved dumb waiter. In Fig. 1, is shown the smallest size of the Columbia Safety Dumb Waiter which can be used for loads up to 75 pounds, making it very suitable for the kitchen service of private residences, restaurants, hotels or for offices, stores, etc., to carry light loads quickly and safely from one floor to another. They are constructed to meet the growing demand for a machine lower in price and not as heavy as the larger similar appliances manufactured by Mr. Speidel. The sheaves run on steel pins and the shafts in babbited bearings, and as the sheaves and bearings are part of the main frame, they cannot be placed in a wrong position or readily get loose. This direct simplicity of method in putting up these machines is a very desirable feature, because unless all parts are placed in exactly the proper positions, the ropes are apt to wear out very quickly, and should the car drop in consequence, a great amount of damage would ensue. These machines can be furnished double or single faced, that is, with one or two hand rope wheels at opposite sides, and are



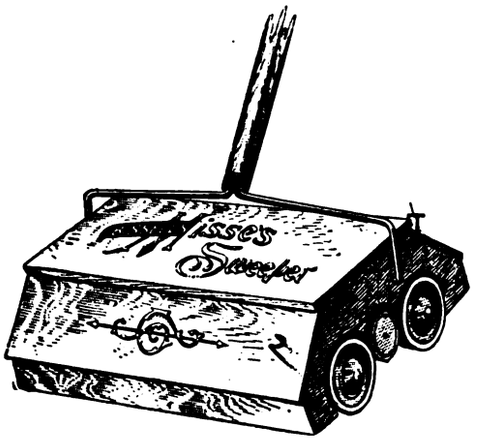


FIG. 2.

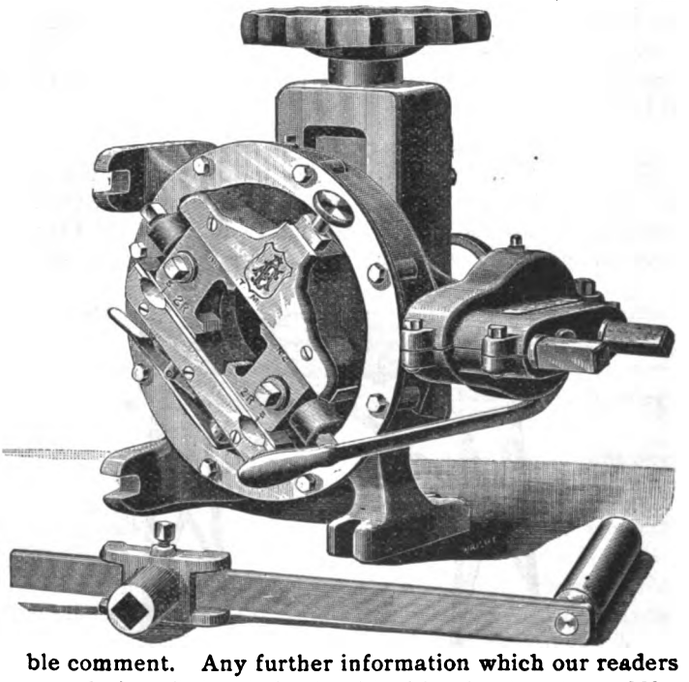
Digitized by Google

so arranged that the balance weight can be placed at the right or left hand or in the rear. The brake being automatic, holds the car at any point of the lift whenever the hand rope is not operated, and without the use of an extra brake rope. In Fig. 2, we see this dumb waiter erected and in operation, by which some knowledge of its constructive excellence may be obtained. These machines are made with 16 or 19 inch shafts, which will suit any size hatchway. They are operated with an endless hand rope, and will stop whenever desired. Catalogues showing the whole assortment of these machines, and prices and trade discounts, will be furnished the trade by application to the manufacturer.

Bissell Carpet Sweeper Co.'s Misses' Sweeper.



The Bissell Carpet Sweeper Co. have just produced, at the special request of some of their leading customers, a

sweeper that they have branded "Misses' Sweeper." It is expected that the "Misses'" sweeper will fill a new want in the trade. It is about two-thirds the size of the regular domestic sweeper; made of finished and polished oak. The handle is about three feet long and has a neat device for dumping the pans, and altogether is quite a neat little article. The Bissell Co. think that this little sweeper will be appreciated by young girls between the ages of ten and fifteen years who, in many cases, take care of their own rooms, and who greatly enjoy having a little sweeper for their own use. It is not intended in any way to displace the regular Bissell's Sweepers, but to fill an entirely new want in the sweeper line. Further particulars, prices, etc, may be obtained by addressing either the New York or Grand Rapids office of the Bissell Carpet Sweeper Co.

New Armstrong Pipe Threading Machine.

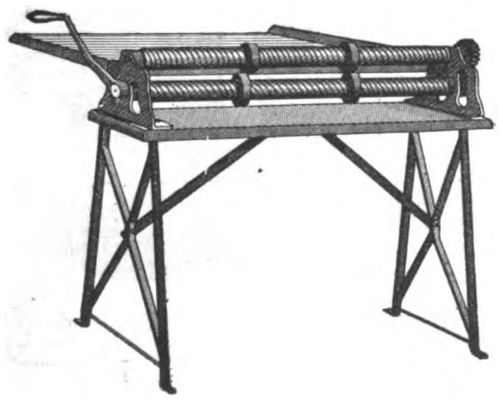
The machine which we illustrate is the outcome of frequent calls received by the Armstrong Mfg. Co. for a machine threading from ¼ to 2 inch pipe, and the natural desire of the company to turn out a tool for this purpose superior in construction and operation to any heretofore manufactured. It will be known to the trade as Armstrong's No. "O" pipe threading machine, and uses the well-known regular Armstrong adjustable dies, which are put in the machine and adjusted in the same manner as in the hand stock. These dies can be opened after cutting a thread, and when the pipe is removed may be locked back to the standard size without resetting This is accomplished by an automatic locking device which is operated by simply pulling a knob. The dies, however, can be adjusted to the variations of the fittings, the same as in the stock. All the gears and moving parts of the machine are run in oil, being enclosed in a chamber which covers and protects them from chips and dust, doing away with any possible chance of chips or dirt getting into the gears. The machine is self-oiling in all its parts, oil being admitted through two holes which are closed by screw plugs. The die head has no teeth on the part where it fits into the shell and forms a bearing, in this way preserving its bearing surface and making it impossible to get loose, as is too often a common occurrence with some makes of pipe threading machines. In addition to the die-carrying head forming a bearing in the manner shown, it has an inner journal, thereby increasing its wearing surface. A very powerful self-centering vise, which exerts its power from the center of the jaws and not on the side, is used with this machine, and will hold the pipe being threaded with a light pressure of the wheel. The construction of the machine admits of its being adjusted to a post on the side of a building, or on a bench. This is a very desirable and an entirely new feature and one said to be found in no other tool of this kind. Another, and one of the principal features of this No. "O" machine is its two speeds, a change from one to the other being effected by merely removing the crank from one spindle to the other. In one case the operator can cut from ⅛ inch to 1 inch pipe inclusive with great rapidity, then by changing the crank to the other speed, from 1¼ inch to 2 inch inclusive, thus avoiding the necessity of turning a great number of times on small size pipe. To operate the machine the vise is pushed back and the pipe located in the mouth of the dies, then by pressing the feed lever and turning the crank the pipe is fed into the dies. When the pipe is flush with the dies the small lever, shown on under side of die head in the engraving is pressed toward the die which releases the locking device, and by pressing the knob on the opposite side, the dies are thrown open. If the vise with the pipe is then pushed back and the knob pulled out, the dies are reset ready for threading another piece of pipe. The locking device adjusts itself automatically. As this machine uses the regular adjustable dies, it can be furnished with dies for threading pipe from ⅛ inch to 2 inches, either right or left, or with bolt dies for threading from ½ inch to 1½ inch rod inclusive, also with dies for threading brass tubing and conduit pipe. This new Armstrong Pipe Threading Machine was shown at the Gas Exposition recently held in Madison Square Garden, New York City, where it attracted a great deal of attention, and caused much favora-

ble comment. Any further information which our readers may desire will be gladly furnished by the Armstrong Mfg. Co., either at their factory in Bridgeport, Conn., or their New York office, No. 139 Centre Street.

The National Feed Box.

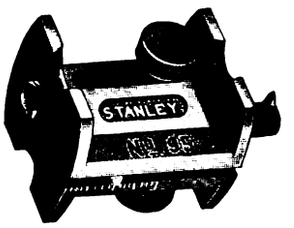
The National Feed Box Co., No. 52 McGraw building Detroit, Mich., are placing upon the market a novel and unique device for feeding horses, of which we show an illustration herewith. The feed box consists of a circular receptacle made of cold rolled steel, with a sloping bottom, as shown in the cut; the box is provided with an inside

Digitized by Google



tray or follower, corresponding in shape with the bottom of the box. This follower slides up and down on a strong malleable iron rod; at its center is an opening about four inches in diameter, across which is placed a grating made of steel wire. When grain sufficient for a single feeding has been placed in the box, the follower is placed upon it, and follows the oats to the bottom as the horse slowly withdraws them through the grating in the follower.

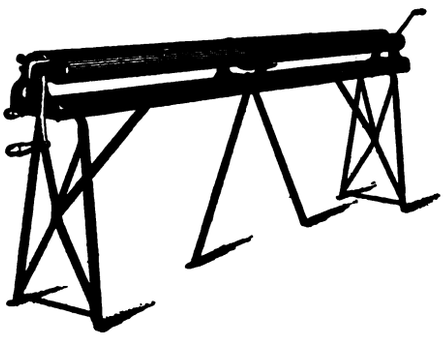
Dainty feeders among horses fairly grow fat from the use of this method of feeding. Many spirited horses feed very imperfectly from the old-fashioned appliances, as a great part of the grain is frequently scattered upon the floor, resulting in great and unnecessary waste from this single cause alone. Even in feeding from an open box the loss is frequently as much as 30 to 40 per cent., which could invariably be saved by the use of this unique feeding box. The box after being carefully constructed, is thoroughly galvanized, adding stiffness to the steel, preventing rust, and making it easy to keep clean. The box is supported by a japanned wrought iron holder, and this slides into a wall plate, which can be screwed to the end or corner of the stall. The feed box, though strong, is quite light and portable, and is consequently well adapted for campaigning. All the original features noted in the construction of the National Feed Box are amply covered by patents already granted or applied for, and we think it is destined to supersede in a great measure the use of obsolete methods so long in vogue.



Watrous Rotary Slitting Shears.

Watrous & Co., Troy, N. Y., are the manufacturers of the Capital Rotary Slitting Shears, which we illustrate herewith. This machine is designed to do the work of the large and expensive squaring and slitting shears, for slitting sheet metal for making gutters or any other purpose where long lengths are required; cutting a whole sheet 30 inches wide at once into strips of any desired width. The cutters are adjustable to wear, and by loosening the screw that holds them to the shaft they may be adjusted to any width desired, or so that only one pair is in operation at a time, it not being necessary to remove any of the cutters not in use. This machine is furnished in two sizes, for light and heavy work. The light 30 inch shears will cut No. 24 iron and lighter, is suitable for slitting metal for gutter making purposes, and is the shear usually sent with their gutter former. The heavy shears will cut No. 20 iron and lighter.

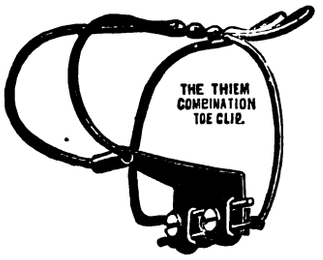
Stanley's Improved Butt Gauge.



Stanley Rule & Level Co., New Britain, Conn., and No. 29 Chambers Street, New York, have recently added to the many improved carpenters' tools which have long been identified with their name, the "Stanley Improved Butt Gauge," an illustration of which we present in this article. It is, as will be noticed by reference to the engraving, an

entirely metallic butt gauge, having one bar with two steel cutters forming part of its equipment; when the cutter noticeable on the outer edge of the bar is set for gauging on the outer edge of the door, the cutter on the inner end of the bar is already set for gauging from the back of the jamb. The other bar with which the butt gauge is provided has a steel cutter to accurately gauge for the thickness of the butt. The form of this tool makes it extremely convenient for carrying in the pocket, and it is constructed in a compact manner so that the bars cannot fall out of the stock. It is handsomely nickel plated, put up one in a box, with a list price of 75 cents each.

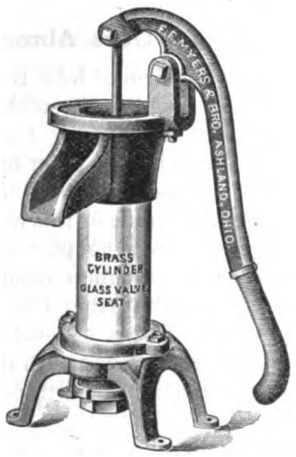
Watrous Capital Gutter Former.



Watrous & Co., Troy, N. Y., the extensive manufacturers of sheet metal working machinery, have recently perfected and placed on the market, the Capital Gutter Former, an illustration of which we give herewith. It is adapted to form either slip or lap joint, or roof gutter. The forming rolls, of which there are four sizes to each machine, are made of steel. A simple adjustment is provided at each end of the machine, so the gutter may be formed up more or less as the iron is soft or hard. The beader rods are interchangeable, being held in position by clips placed at intervals along the forming rolls, and are also secured at one end while the other is left free so that in operation the strip of metal to be formed is entered into the slot in beader rod at its free end, and then moved along into position ready to form the bead. Two socket cranks are then applied to the ends of the beader rod and given one turn, followed by one turn of the forming roll on which the gutter is to be formed, and the operation is complete. The gutter can then be drawn off over the free end of the beader rod without removing the rod, leaving the machine in position ready to receive the next strip. The Capital Gutter Former, as shipped from factory, includes three forming rods, to form Gutter from 3 to 8 inches inclusive, and one size beader rod ½ (or ⅝) inches. Its capacity is stated to be from 600 to 800 feet of perfectly formed gutter per hour, with two men or boys. Prices and terms will be given upon request of the manufacturers.

Digitized by Google

The Thiem Combination Toe Clip.



Thiem & Co., St. Paul, Minn., are now prepared to market their newest improved Combination Toe Clip, an illustration of which we give herewith. This Combination Toe Clip is claimed by the manufacturers to combine all the good points usually attributed to those made from sheet steel and wire. The special feature of this toe clip is the arched steel reinforcement at the base, which makes it

next to impossible to bend it down so as to pinch the toe and also affords an easy support to the sole of the shoe. As in its construction it is intended to pull up as well as push down, it is thereby enabled to give double driving or double stopping power. The feet cannot be retained in them in case of a fall. They are made of cold rolled sheet steel, and spring steel rods, and are finished in full nickel plate. They are adjustable to fit any size of shoe, and can be fastened to the pedals with either one, two or three bolts. They are made in two sizes; one, the regular standard size, and the other a special size for ladies and racing men. The retail price being 25 cents a pair, the indications are they will prove fast sellers.

Myers' Brass Body Pitcher Pumps.

F. E. Myers & Bro., Ashland, Ohio, in connection with the extensive line of such useful articles already manufactured by them, have decided to place upon the market a line of brass body pitcher pumps, an illustration of which we give in this column, and which it is intended shall be of superior quality and thorough workmanship in every feature of their construction. They will have seamless

drawn brass cylinders, and be equipped with patent glass valve seat and poppet valve, as well as a revolving top. The base, which is of a neat and novel design, will be attached to the cylinder by means of two heavy bolts. It is intended that the entire makeup shall be of an attractive character, and that the pump will meet a demand for something superior in this especial line.

John Sommer's Son, Nos. 355-365 Central Avenue, Newark. N. J., is now ready to place upon the market his line of Wood Lemon Squeezers, for the season of 1897. A circular, illustrative of these goods has been prepared, showing that his Boss Squeezers are made with lignum vitae, and other hard-wood bowls. He also has a porcelain bowl squeezer with the bowl 2x3½ inches, and explains that so far as they can learn, there is nothing like it on the market, so far as strength is concerned. Circulars descriptive, etc., will be sent on application.

Recent Trade Publications.

We have received the latest catalogue of "Harvest Specialties and Seasonable Miscellaneous Supplies," issued by the Whitman & Barnes Mfg. Co., Cincinnati, Ohio, and No. 111 Chambers Street, New York, who may be counted among the largest manufacturers in this country of steel specialties for the agricultural and Hardware trades, with factories located at Akron, Ohio, West Pullman, Ill., and St. Catharines, Canada. They have in addition established warehouses in New York, Chicago, Kansas City, London, Eng., and Paris, France. Among the large number of useful specialties with which their interesting catalogue is filled, the Hardwareman would find the following of more-than special interest: A large line of haying tool fixtures, feed and ensilage cutters, both hand and power sizes; lawn mowers and grass catchers, wrenches of various designs, embracing 16 varieties, which combine 130 different sizes and styles. They are also extensive manufacturers of twist drills, which are marketed under the name of the "Diamond" and include every possible variety from the straight and taper shank, to the three-lipped, single twist, and self oiling assortment. They are well known as the manufacturers of the "Gibbs rubber cushioned horse-shoe," which improvement is claimed to be the most humane device invented for the benefit of that noble animal.

The Berger Mfg. Co., Canton, Ohio, have issued a handsome little leaflet, in illustration and description of their extensive line of well-known lanterns. A cute design on the outer cover shows a modern Diogenes in his pajamas, looking for the truth, equipped with a Berger lantern, while the back page contains a representation of their extensive works in Canton. They illustrate their tubular lanterns in various sizes and shapes, and their reflector lantern, giving a list of prices. They also illustrate their Crystal Valve Oil Can, and in a word of explanation, say: "The word 'Berger,' when applied to a lantern, signifies the best made. Our customers may rely implicitly upon the excellence of anything we send them, as all our goods are carefully examined and thoroughly tested."

A circular card headed "A Removal of Note," announces that the Troy Nickel Works have taken possession of their new establishment in Albany, N. Y. A picture of the new home is shown on one side of the card. "Alaska Stove Trimmings, Always Cold," is still the watchword of John E. Gaitley and his active force.

No Cycle Shows.

A meeting of the board of directors of the National Board of Trade of Cycle Manufacturers was held in the offices in this city some days since. A number of active and associate members were elected, and the following resolution adopted:

Resolved: That no National or Local Cycle Exhibitions shall be held or sanctioned by this board between June 1, 1897, and June 1, 1898; and that the board of directors recommend that February 22 be designated as a general opening day throughout the country.

It was shown that, because of the smaller charges for space at the national shows this year than were made last year, there was a saving to the exhibitors of over $75,000.

The Berlin Iron Bridge Co., East Berlin, Conn., are erecting a new roof for the power station of the Scranton Illuminating, Heat & Power Co., Scranton, Pa. The building is 42 feet wide and 195 feet long, divided into two portions: a boiler room and an engine room. The framework of the roof constructing is of steel, and absolutely fireproof. It has been the aim of the Scranton Co. to erect a substantial and fireproof building, to replace the one which they recently lost by fire.

Narrow Escape of Morgan & Wright's Factory.

In a fire which destroyed in Chicago over $100,000 worth of property, Morgan & Wright's large tire factory at May Street and Carroll Avenue, on May 27th, had a very narrow escape from destruction. Tongues of fire had leaped the narrow alley on one side, and poured into the Morgan & Wright factory, where hundreds of men were at work; for a moment an incipient panic seized the men, but some one more level-headed than the rest, shouted "Close the iron shutters." The men hesitated for a moment, when the foreman called for volunteers at every window. There was a rush into the smoke and heat, and the fifty windows were manned by workmen reaching for the hot shutters. Some of the men were scorched and all were choked by the smoke, but the shutters swung to with fierce clangs and shut out of sight the raging furnace scarce ten feet distant. Meantime impromptu companies of fire fighters were using hand extinguishers on each of the eight floors, and twenty men were deluging the roof with streams from the standpipes of the building. It is believed that this promptness of action on the part of the men was all that saved the great structure and its contents, for eight fire companies took possession of the factory and moved 40,000 smoking tires away from the hot rear walls, and trailed thousands of feet of hose through the building and up to the roof, from which point of vantage several streams of water were directed upon the roof of the burning building.

In prompt recognition of the faithful labor performed on this occasion by the fire department, Morgan & Wright sent Chief Swenie a check for $500 to be applied to the firemens' pension fund; accompanying the check was a letter in which the firm expressed their thanks for the heroic work done by the fire department at this critical time.

Wai ing for a Tariff Settlement.

C. E. Adams of the Cleveland Hardware Co. is hopeful of an improvement in business. He is satisfied that the settlement of the tariff question will see a decided betterment of business. At present the company is running on full time in its shops, but not with the full quota of men. Competition in order to keep the shops in operation is so close that the products of this company as well as many others are lower than is consistent with the operation of the plant on a paying basis. Before a slight revival in business was felt the shops were run simply to keep up the small orders and be in readiness for the awakening of business, which followed, as was expected.—*New York Herald.*

Death of John Houston, Sr.

John Houston, Sr., of the Burr & Houston Co., iron founders, Brooklyn, N. Y., died at his residence No. 576 Marcy Avenue in that city, on June 1st, from paralysis. Mr. Houston was first stricken about five years ago, while at his place of business, and in the hope that he might the more readily regain his health, the family had since moved South, but were unable to check the disease which finally resulted in his death. During the war Mr. Houston was connected with the Quartermaster's Department of the Union Army at Nashville, Tenn. He was a member of the Throop Avenue Presbyterian Church. A widow and two sons survive him.

H. S. Willett, formerly connected with the old Hardware jobbing house of Burger & Baumgard, has associated himself with the Allerton, Clarke Co., Nos. 97 Chambers and 79 Reade Streets, New York, and will travel in the State of Texas, with the Hardware trade of which he is thoroughly familiar, in the interests of that well known company.

A Distinguished Honor.

During this month about seventy of the prominent capitalists of South and Central America will visit this country, for the purpose of studying our advanced systems and methods of business. An elaborate programme for their entertainment has been arranged in all the large cities which they will visit. Dayton, Ohio, has been selected by the delegates as one of the cities of interest, and they expect to arrive in that city the latter part of this month.

The primary object of their visit to Dayton is for the purpose of inspecting the factories of the National Cash Register Co and studying the methods in vogue in this large plant. Here the cost of production is much less than in other places, labor-saving machinery has reached a high state of perfection, and the relation between the employer and employed is almost ideal. Another reason for this visit to the factories of the National Cash Register Co. is the fact that the well-known systems which they furnish to retail stores is carried out in every detail in their factories themselves.

Minnesota Hardware Association.

Tho election of a permanent secretary, and the preparation of a circular to the trade, were the important duties before the executive committee of the Minnesota Retail Hardware Association when the committee met in St. Paul, some days ago. In attendance were President Charles F. Lander of St. Cloud, Vice-President A. T. Stebbins of Rochester and Committeemen C. F. Stremel of Minneapolis, W. H. Tomlinson of Le Sueur, M. R. O'Neil, of Graceville, James E. O'Brien of Crookston, John Karst of Stillwater and Edward A. Moye of Duluth. J. W. Clark of Minneapolis, and formerly of Benson, was chosen permanent secretary. He will immediately open an office in St. Paul. He will send out to all retail dealers in Hardware throughout the State a circular asking the dealers' co-operation with the aims of the association.

Will Graham Goes Abroad.

William A. Graham of the firm of John H. Graham & Co., New York, accompanied by his wife, took his departure for Europe yesterday on the steamer *City of Paris*, the Queen's Jubilee being the objective point of a two months' vacation, which his steadfast devotion to business has amply merited. The export trade of this well known house has increased so largely during the past year or two, no doubt exists but what he will combine business with pleasure while away, and study still further the markets of the future, for the products of his several factories. His friends all hope the trip will be filled with the good things of every description that make life worth possessing.

If there are any Hardwaremen of New York or vicinity, as there probably are, who attended the famous school, No. 35, of New York City, between 1855 and 1868, they will be pleased to learn that a movement is on foot to give a dinner and reception in honor of President Hunter of the Normal College, who was the principal of that school between the years named. This movement is in charge of Comptroller Fitch, Corporation Counsel Scott and School Inspector Charles Putzel, and the addresses of the parties mentioned should be sent to Mr. Putzel, in the Postal Telegraph Building, No. 253 Broadway, New York. The dinner will be given probably in September or October.

In some of the cities of Europe the cost of putting out a fire is made a charge upon the property of the person for whose benefit the fire department is called out.

HARDWARE costs only One Dollar a year.

Mr. Foot's Impressions Abroad.

Noticing the genial face of J. D. Foot again among the habitues of the Hardware Club and for the first time since his return from abroad, a representative of *Hardware* begged his indulgence, and asked for a little of his valuable time in order to receive from so observing a traveler, a few of those impressions which his frequent visits to the other side admirably fitted him to obtain.

With his customary complaisance, Mr. Foot said: "Go ahead with your interviewing and if any off-hand comments of mine possess sufficient value to be, as you observe, of interest to the readers of *Hardware*, I shall be glad to make them."

"In your recent visit to England," observed our representative, "what was it more than anything else that claimed your attention?"

Mr. Foot smilingly replied:

"You ask me as to my impressions of English life, covered by what I saw in my late trip to England. I hardly know where to begin, inasmuch as I cannot decide in my own mind which claimed the most of my attention and interested me more deeply, whether it was the home life of the manufacturer which I had an excellent opportunity to participate in; the condition of trade, or the position of the English artisan or laborer."

"Like most of the intelligent observers occupying similar advantages, you doubtless found the home life in England one of ideal comfort?"

"To the average American," said Mr. Foot, "the home life of England is unknown. Certainly the refinements and simplicity of life which are found in the English home are very enjoyable, and any nation would benefit itself could it bring its standard up to that of the home life of the average English merchant or manufacturer. All the refining influences of floriculture are carefully nurtured; the average English child of ten or twelve years of age having a much better knowledge of the flowers, fruits and vegetables of his country than would the average man in the United States, while all manly out-door sports are participated in by all members of the family. With a deep regard for religion, family prayers, both morning and night, are said, with all members of the family present, as also all servants in the employ of the family. While the English table is bountifully supplied, they all study careful economies, and to my surprise are not the beef-eating people we generally suppose them to be; on the contrary, they indulge freely in all kinds of cereals, are great tea drinkers, and also large consumers of sweets of all kinds. With breakfast, dinner and supper practically conforming with our hours, the dinner being at 1 o'clock, in their houses they intersperse it with tea, bread and butter and toast sometimes at 11 in the morning (universally at 4 to 5 in the afternoon), beside just a little to eat or drink before retiring at night, say 10:30 o'clock. At the 7 o'clock cold supper it is no uncommon thing to see from three to five desserts on the table, all of which you are pressed to try separately or collectively. Nothing but the English climate and the out-door life which they cultivate would enable them to stand such a frequent consumption of food."

"In regard to the conditions of business, are they suffering like ourselves with uncertain markets, low prices and labor disturbances generally?"

"As to the condition of business," observed Mr. Foot, "everywhere throughout Great Britain business is on the boom. You hear of it in a very moderate way on the cars, in the stations and hotels, and considering the fact that the Englishman is too good a business man to talk but very little of his business affairs in a way to be heard by outside people, business must be, and is, excessively good to warrant the little he does say. Manufacturers of textile fabrics, shoes and other articles of clothing are running their works well into the night, while all machine shops and rolling mills have more than their full quota of work, and I overheard one Englishman say to another, 'Well, if we cannot make money in these times, we never will.' The laborers are fully occupied, but as is always the case when prosperity is reigning, are very restless, and the fear of strikes is constantly before the public."

"How does the condition of the British workman, or the nature of his environment, compare with that of our own country?"

"My observations would lead me to say," said Mr. Foot, in reply, "that the average English laborer is more contented and happy than is the average American laborer. Their home-life and their pursuits after pleasure are of a character to induce contentment, while their observation of Sunday is, as a rule, dignified and reverential. The workingman, in what are known as the manufacturing cities of England, takes fully as deep an interest in the refinements of home-life as does his employer. I was much interested in the thousands of small gardens existing in the suburbs of these cities, such as Sheffield, Wolverhampton, Nottingham, Leicester, etc., which gardens, I might say, surround the suburbs of the city. Each garden is perhaps 100 feet in length by 25 feet in width; is neatly enclosed with a two-foot fence. After working hours, the English laborer, with his wife and children, will repair to this garden for a few hours' work and pleasure, the husband looking after the vegetables, the wife and children after the flowers, etc. This is made possible by the long twilight which exists in England at this season of the year, extending up to 9:30 P.M. When their evening's recreation is finished, they shut their gate, and go back to town, a distance of one, two or three miles, on the horse-cars, at an expense of two cents, and such is the moral influence of these cities, that without any police protection, not so much as a small flower is ever taken from the thousands of gardens surrounding each of these cities. Could such a state of affairs exist in any city of our country? I am afraid not."

By this time many of his friends appearing to congratulate him upon his safe return, our representative thanking him for the courtesy extended to *Hardware*, brought the interview to an end.

The Iowa Farming Tool Co., Fort Madison, Wis., the large manufacturers of agricultural tools, have just issued in a pamphlet of 20 pages and cover, an exceedingly complete telegraphic code designed to be used in connection with their "Export Catalogue D," in order that their customers abroad, who are becoming more and more numerous with each recurring season, may be able to "cable" their urgent wants at a minimum cost. It is certainly extremely comprehensive as well as brief and concise; it will doubtless be fully appreciated by their foreign purchasers and tend to increase the utility of their important export department to the fullest extent.

John V. O. Miller, who for a number of years was associated with the firm of John H. Graham & Co., and later for a long time with the Livingston Horse Nail Co., has taken a new departure, and will in the future represent the firm of Surpless, Dunn & Co., No. 55 Warren Street, this city, throughout the State of New York. Mr. Miller's many friends wish him every success in his new territory, feeling confident that with the many desirable lines of goods controlled by this representative commission house, the future will be a pleasant and successful one for "our John."

To the horse, it is a long lane that hasn't a good foundation.—*L. A. W. Bulletin.*

HARDWARE is printed for men now on earth.

Digitized by Google

Review of the Markets.

Hardware: Unimportant changes, if any, characterize the pulseless markets of the present. The season's traffic is fast reaching that natural ebb, when the future will provide problems to solve, and the present prove only a memory of "what might have been."

Wire Nails: A number of scarehead articles in some of of our contemporaries has made a slight ripple in the buying of these necessary adjuncts to a regular stock. The fears of any material change in quotations have subsided, however, until the tariff bill is settled. Orders for future delivery have been booked at current prices, which certainly are low enough to keep the trade in a normal condition. We continue previous quotations of carload lots at mill, f. o. b., $1.35@$1.40. New York prices for smaller lots from store, $1.65.

Cut Nails: The demand for Cut Nails has been continued in fairly good shape and at reasonable prices, the movement to advance the quotations on Wire Nails not having seriously affected the Cut Nail market. There has been a sustained enquiry, but no very large transactions. We quote: Carload lots, delivered, New York, $1.40; Philadelphia, $1.38; Boston, $1.42. Smaller lots from store are held at 10 cents a keg advance. In the presence of a good-sized specification the above carload price could possibly be shaded a little.

Horse Nails: As will be noticed in our Prices Current, the ruling quotation on Putnam Horse Nails has been changed to 25 per cent., in place of the 15 per cent. so long prevailing. This is the result of a change of policy affecting their distribution, to which the attention of our readers is called in another column in this issue.

Linseed Oil: The Dean Linseed Oil Co. quote as follows: In lots of less than 5 barrels, 31 cents per gallon; in lots of 5 barrels or more, 30 cents per gallon; Boiled Linseed Oil, 2 cents per gallon higher; Calcutta Oil, 50 cents per gallon.

THE PITTSBURG TRADE.

There is a very fair volume of business doing for this time in the season, and although the extreme low prices keep the total in dollars below last year's figures, yet the tonnage must be nearly up to 1896 shipments.

The news of the failure of the wire pool makers to get together will probably cause a slight reaction in the demand for wire and nails, but the stimulus imparted by the expected combine was not very great.

We notice quite a cheerful tone of slight improvement in trade, and sincerely trust the corner has been turned and that we shall have a steady increase for the rest of the vear. Some strikes have occurred among iron workers lately, which may spread to larger proportions, though many accept cuts in wages rather than risk idleness. Narrow margins for business of all kinds is the rule now, and a slight stiffening of values would be gladly welcomed by all.

LOGAN-GREGG HARDWARE CO.

THE COLUMBUS TRADE.

Trade has not been quite so good for the past ten days, and we could not expect it, with the unfavorable weather we have been having. It has rained nearly every day, and cold enough for neavy overcoats and furs. A good part of the corn that was planted early will have to be replanted, as the ground has been too cold for it to sprout. Grass looks well, also the wheat, except where the ground was not well drained. In some places it is about the color of a duck's foot.

Prices on some goods are higher. There was quite a flurry in the wire and nail market, after the announcement was made that the rod pool was likely to come to life again. Both nails and wire are about ten per cent. higher. The extreme price on screws has also been withdrawn by some manufacturers, and we think it would be hard to get as low a price as could have been secured a week ago. Lawn mowers and scythes and snaths have been in good demand, while the demand for screen goods has dropped off. A fly would freeze stiff before he could buzz twice, but they will see the bald-headed fraternity later on, and tickle you, and then laugh at your effort to "swat" them a mighty "swat."

I forgot to say in my last letter that Columbus has a Hardware association. It is the Wholesale and Retail Hardware Dealers' Association, and has about all the Hardware dealers of the city as members, and we hope the few who have not yet become members, will soon do so. The officers are: E. L. Harris, of J. S. Abbott & Co., president; J. H. Smith (your humble servant), vice-president; Dwight Burr, of the Kilbourne-Jones Co., secretary; Darius Tallmadge, of the Tallmadge Hardware Co., treasurer. There was some talk of fixing a heavy bond for the treasurer, but the members decided that they could keep an eye on Mr. Tallmadge, so he was not required to give bond. I think it is a little risky, as there may be $2.25 in the treasury occasionally, and Hardwaremen all know that it is not every day that you can drop on to $2.25. We have had two meetings and got acquainted with each other, and decided that we are a pretty good lot of fellows. We then opened a few bottles—excuse me, I mean a few kegs of nails (Hardwaremen know that nails are not put up in bottles). We found they all had heads on them (I mean the nails). We then went home. I am only speaking for myself on this point. I am sure they all went home some time in the night, however, and slept the sleep of the just, just the way all Hardwaremen sleep. He may have nightmare sometimes, and dream that a pile of barb wire is tumbling down on him, or that yellow ochre puffed up and made a yellow kid out of him, or that he fell off a step-ladder and "lit" on some pitchforks, or a cask of strap hinges rolled over him, and then he fell down the elevator shaft, and wakened up, his hair stood on end. I refer to those who have hair (I want it distinctly understood that I am not the fellow who had the dream, as my hair can't stand up). The party still lives and is happy. May we all ever be that way.

SMITH BROS. HARDWARE CO.

THE PHILADELPHIA TRADE.

The latest excitement in the Hardware business has been the wire rod and wire nail situation.

The air has been full of conflicting rumors which gradually took more and more definite shape, until finally it seemed as if a revival of the old combination was assured. Later reports say that so far it has failed to materialize, but there is no telling what the future may bring forth.

It is but reasonable, however, to assume that the nail men are thoroughly sick of selling nails at no profit, and how long they will continue doing so is a question which may be answered any moment. Of course, if the wire rod combination should be successful, all goods made of wire would be more or less affected—some of them, in all probability, very decidedly.

In other lines the market is dragging along, apparently on the bottom. Prices are low—lower than ever in the past—while purchases of both jobber and dealer are moderate in volume. During the last few days an improvement in this respect has been noticed by some of the larger manufacturers, who report that business has increased considerably and augers well for the future.

It is a noticeable fact that at the low prices now prevailing on certain staples, some manufacturers, who have been represented on the market for years, have now withdrawn and are refusing to meet current prices, and among these withdrawals are the names of some of the largest manufacturers in the country. This is a pretty sure indication that prices have reached the bottom, and while a fight is only limited by the depth of the manufacturer's purse, still

Digitized by Google

it has a limit, and when recovery occurs it must go beyond figures which are now recognized as barely cost.

BIDDLE HARDWARE CO.

THE TOLEDO TRADE.

Almost one half of the year 1897 has already gone by, and still the great ship of prosperity has not yet arrived. Probably the financial storms and distrust have delayed its arrival, but we are all of good cheer that the ship will come in loaded down to the brim with those prosperous times that we are so earnestly wishing for.

Trade for the first five months of this year has been fair; while the sales do not foot up quite as much as the year 1896 for the same time, still owing to the tremendous declines that have been taking place on staple goods, we think that the volume of business has been greater; that is in bulk. Profits have been very much cut down, and we are surprised that so many staple goods still remain at such low figures.

Goods that are mostly in demand at the present time are screen doors, screen windows, wire netting, paints, oils, varnishes, ice cream freezers, steel goods and tin plate. There is quite a little demand for builders' Hardware.

Toledo, in general, is fairly prosperous. Most of our establishments are running full time, even if they are not using their full quota of help.

Another thing that we notice in the business this spring, was that very few retail dealers bought very many goods ahead, or for future shipment, and only purchased when they needed them, which made the jobber hustle to fill orders for certain staple goods. This is as it ought to be.

Collections have fully 25% better than a year ago. There seems to pervade a conservative spirit amongst the merchants which is as it should be, but "Oh, when will the era of declines cease?" THE STOLLBERG & CLAPP CO.

THE CHICAGO TRADE.

An improvement in the number and size of orders; improvement in collections and increased confidence in business, characterize the trade situation with us for the past two weeks.

A number of manufacturers have lately withdrawn their prices on screws, nails, wire and kindred lines, and a stiffening of quotations, when made, has combined to cause a tendency to make goods in all lines sell quite readily to the retail trade.

The weather has also become bright and warmer, causing a strong demand for seasonable goods, and we are enjoying a fine business at the present time which we confidently expect to continue throughout the month.

WELLS & NELLEGAR CO.

THE DENVER TRADE.

Summer weather is very tardy in Colorado this season, and season trade is correspondingly backward. The month of May, however, has closed with a fairly good showing in volume of business, but decidedly unsatisfactory margins. The trade of the retailer does not seem to be up to par, making him cautious in his specifications, and the jobber, in order to secure the business which he thinks he ought to have, is ready with cut prices to induce sales which he apparently thinks some other house is getting away from him.

The outlook in Colorado for crops of all kinds was never more promising. The fruit yield will be enormous, and unusual rains will supply the lack in some communities where water for irrigation is often insufficient, and will also insure good returns from lands dependent upon rainfall alone.

Mining is being pushed and more men employed than ever before. The result of all this must be felt in due time and cannot be otherwise than a great improvement of trade generally. GEORGE TRITCH HARDWARE CO.

THE DAVENPORT TRADE.

T. James Fernley, secretary of the National Hardware Association, will honor us with a visit on the 28th inst. The president of the Iowa Hardware Jobbers' Association has invited all of its members to lunch with him on that date to meet Mr. Fernley.

The prospect of some sort of a wire rod pool has stimulated trade in wire, wire nails and many other articles made from wire. Screws advanced a point in sympathy with wire. The possible advance and threatened scarcity of screen wire has caused a large demand and it may be that we will have to resort to fly-traps and fly-paper before the season passes.

Business is slowly but surely improving. If the people will give more attention to business and less to politics, they will make more money and enjoy life better.

SICKELS, PRESTON & NUTTING CO.

THE ST. PAUL TRADE.

We are glad to report that as far as there is any change in the Hardware trade in the Northwest, it is for the better. Up to the present time, prospects for the coming crop could not be improved. Farmers are looking forward hopefully to this result, and consequently are buying more freely than they would do if the conditions were different. While the retailer is going slow, the increased demand for goods obliges him to buy often, and a daily order from the same customer is not an uncommon thing.

In the city, there is not much new building, but the amount of repairing and furbishing up was never greater. This is an evidence of returning prosperity. In short, all things point to improved conditions, and while the movement is slow, we believe it is sure. Collections are very good. C. W. HACKETT HDWE. CO.

The "Climax" Line.

Taplin, Rice & Co., Akron, Ohio, whose extremely modern line of stoves and ranges has achieved deserved popularity, are this season placing before the trade their "Climax" line of ranges, heaters, etc., possessing a greater number of improvements in their construction than has previously been possible. This line includes the "1897 Pattern" of the "Climax Cast Iron Range," provided with a patent flush reservoir; the "Buckeye Climax," which is a new four-hole cook stove; the "Climax Junior," a four-hole cast iron range with balanced drop oven door; the "Air Tight Climax" for soft coal, which is a handsome parlor heater; and the "Gem Climax" range for coal or wood, claimed to be unexcelled by any range in its class, either in style or price. This season they place upon the market an entirely new line of "Modern Climax" steel ranges, in both portable and flush reservoir styles, which possess many superior points of merit that should command the attention of the trade.

The smallest screws ever made are used in the manufacture of miniature watches which are sometimes fitted in rings, shirt studs, bracelets, etc. They are the next thing to invisible to the naked eye, looking like minute grains of sand. With a good glass, however, it may be plainly seen that each is a perfect screw, having a number of threads equal to 1260 to the inch. These tiny screws are 4-1000ths of an inch in length. It is estimated that a lady's thimble of average size would hold 10,000 of them. No attempt is ever made to count these "tiny triumphs of mechanical ingenuity," other than to get a basis for estimation. The method usually pursued in determining their number is to carefully count a hundred, and then place them on a delicate balance, the number of a given amount being determined by the weight of these.—*St. Louis Republic.*

The man of the smallest calibre bores you the easiest.—*L. A. W. Bulletin.*

Decades of Invention.

The following is quoted from a paper by Beta in the *Inventive Age:* "The decade (1866–1876) marks the beginning of the most remarkable period of activity and development in the history of the world. The perfection of the dynamo, and its twin brother the electric motor, by Wilde, Siemens, Wheatstone, Varley, Farmer, Gramme, Brush, Weston, Edison, Thompson and others, soon brought the great development of the electric light and electric railways. Then appeared the Bessemer process of making steel, dynamite, the St. Louis bridge, Westinghouse air brake and the middlings purifying and roller process in milling. That great chemist, and probably greatest benefactor, Louis Pasteur, added his work to this period; the Gatling gun appeared; great developments were made in ice machines and cold storage equipments; machines for making barbed wire fences; compressed air rock drills and the Mont Cenis tunnel; pressed glassware; Stearns duplex telegraph, and Edison's quadruplex; the cable car system of Hallidie, and the Janney car coupler; the self-binding reaper and harvester; the tempering of steel wire and springs by electricity; the Lowe process for making water gas; cash carriers for stores, and machines for making tin cans.

"With the next decade (1876–1886) there arose a star of the first magnitude in the constellation of inventions. The railway and telegraph had already made all people near neighbors, but it remained for the Bell telephone to establish the close kinship of one great talkative family, in constant intercourse, the tiny wire, sentient and responsive to the familiar voice, transmitting the message with tone and accent unchanged by the thousands of miles of distance between. Then come in order the hydraulic dredges, and Mississippi jetties of Eads; the Jablochkoff electric candle; photography by electric light; the cigarette machine; the Otto gas engine; the great improvement and development of the type writer; the casting of chilled car wheels; the Birkenhead and Rabbeth spinning spindles, and enameled sheet ironware for the kitchen. Next the phonograph of Edison appears, literally speaking for itself, and reproducing human speech and all sounds with startling fidelity. In this decade we also find the first electric railway operated in Berlin; the development of the storage battery; welding metals by electricity; passenger elevators; the construction of the Brooklyn bridge; the synthetic production of many useful medicines, dyes and antiseptics from coal tar products, and the Cowles process for manufacturing aluminum.

"In the last decade (1886–1896) inventions in such great numbers and yet of such importance have appeared that selection seems impossible without doing injustice to the others. The graphophone; the Pullman and Wagner railway cars and vestibuled trains; the Harvey process of annealing armor plates; artificial silk from pyroxyline; automobile or horseless carriages; the Zalinski dynamite gun; the Mergenthaler linotype machine, moulding and setting its own type, a whole line at a time, and doing the work of four compositors; the Welsbach gas burner; the Krag-Jorgensen rifle; Prof. Langley's aerodrome; the manufacture of acetylene gas from calcium carbide; the discovery of argon; the application of the cathode rays in photography by Roentgen; Edison's fluoroscope for seeing with the cathode rays; Tesla's discoveries in electricity, and the kinetoscope, are some of the modern inventions which still interest and engage the attention of the world, while the great development in photography and of the Web perfecting printing press, the type-writer, the modern bicycle, and the cash register is beyond enumeration or adequate comment."

He Knew the Author.

Satire's my weapon, but I'm too discreet
To run amuck and tilt at all I meet

Sang the first baseman as the umpire fined him ten for talking back.

"Who wrote that?" admiringly inquired the second baseman.

"Pope."

"I know that party. He makes bicycles."—*American Wheelman.*

She—"Have you got your bicycle yet?"

He—"Oh, yes."

She—"I don't see you on the road as much this season as I did last."

He—"No, I'm on my wheel more now. I ride better, you know."—*Yonkers Statesman.*

Universal Spoke Shave.

Has two detachable bottoms, adapting it equally well to circular work or straight; and, by means of a movable width-gauge, can be used in rabbeting. Either handle can be screwed into a socket on top of the stock, thus enabling the owner to work into corners, or panels.

No. 67. Spoke Shave, for curved or straight work, $1.50

To Protect Secrets of Trade.

In a recent case in the Appellate division of the Supreme Court in the fourth department it was stated to be the law that where the owner of a process or invention for manufacturing goods has kept the process or invention secret from all persons except confidential employees, the court will aid him to restrain those who have been his former employees from exposing or using in a rival establishment the knowledge which they had acquired while acting as such confidential employees.

The rule has been before laid down that a right which is valuable because of secrecy is to be protected by the law from any impairment through abuse of trust placed in confidential servants. The law raises in such cases an implied contract that a person who holds a confidential relation to his employer will not divulge any trade secrets imparted to him or discovered by him during such employment.

While the court is careful to foster and encourage open and legitimate competition, it is against good morals and a breach of trust, which the law will restrain and prevent, for an employee to take an improper advantage of the knowledge he has acquired by reason of the confidential relation.

The decision commends itself as enforcing principles of justice and common fairness in the dealings of business men.—*San Francisco Chronicle.*

The pneumatic-tired safety can get along without improved roads better than the teamster can.—*L. A. W. Bulletin.*

Wheel Slang.

The wheel is a more prolific source of slang than most modern inventions. The *Cycling Gazette* of Cleveland has been collecting specimens of the liberties taken by cyclists with the English language, and prints the following: In many Western towns a lady rider is called a "bloomer" whether she wears them or not. The word "scorcher," as indicating a speedy cyclist, is tangled with our language beyond extrication. In Chicago, however, the speedy rider is called a "scoot." Where slangy people used to say "You made a miscue," or "You slipped your trolley," they now say "Your tire is punctured," meaning that you have come to grief. Wild talk is called "coasting." An old story is not a "chestnut," but a "century." A young couple evidently attached to one another are said to be "riding tandem." A man leading a fast life is "geared too high." An elderly cyclist is called "a high wheel," an allusion to the primitive bicycle. A chaperon is known as a "pacemaker." There are many other slang phrases, but the above are the best of the list printed by the paper mentioned.—*New York Recorder.*

Skates that are locked on the feet by pressing the heel of the shoe into the heel-plate of the skate have recently been patented.—*Industrial World.*

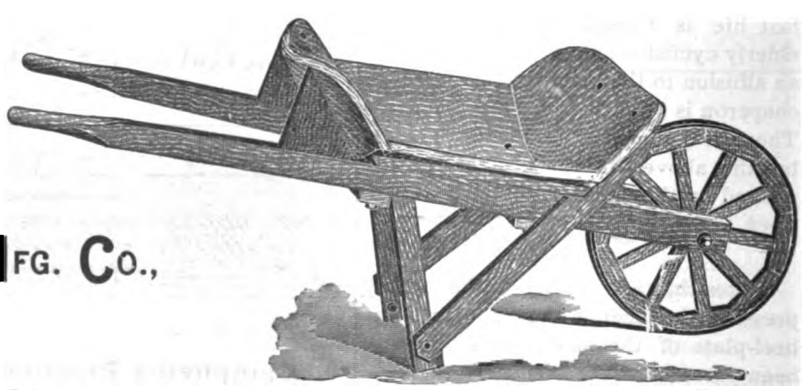
Hardware Names.

So accustomed does the ironmonger, long in the business, become to the name of his wares, that he is not much given to speculation upon their derivation. If the question should arise in his mind, it is dismissed with the reason that it was so named when made, possibly hundreds of years ago—just as he was named John when he was born. This does not satisfy the younger aspirants for Hardware lore. "If," they say, "you were named John—why John?" To satisfy this demand the following "Whys" have been collected:



A knife was a knife in colonial times. The Pilgrim Fathers had knives. In England knives were known as far back as Chaucer's time, as the Sheffield Whittle testifies. For the name, however, we must cross the English Channel to France. In the thirteenth century knives were known as "mensaculæ" and "artari," a little later by the word "kenivet." From which is evidently derived "canif," or knife. In this connection it may be said that two-prong forks are mentioned for the first time in an inventory of Charles V. in 1379. The table upon which food was placed was surrounded with benches or bances, whence "banquet." To know why a two-faced rim lock is called a "Janus" faced lock, we must go from the realism of the twentieth century to the ideal symbolism of ancient Greece. There, in a temple whose doors were never closed during war, Janus, the god with two faces, was enshrined. In the ironmonger's shop "Janus" becomes a fitting name, indicating in the lock that it is the same on both sides, and in the shop the alertness necessary to success in these days of commercial warfare. In the sixteenth century pistoles and pistolets were so called, it is said, because they were invented at "Pistola." But on this subject etymologists differ, some preferring the suggestion that they were called pistols from the fact that the bore was of equal diameter with the "pistola," a coin of the time. In the names anvil, stirrup and hammer we find a very curious thing—that the position is reversed, and that these articles give their names to what was made long before their use was known. The three pretty little bones of the inner ear are called "hammer, anvil and stirrup."—*Ironmongery.*

An Ancient Nail.

It is stated by one of our English contemporaries that while lately sawing a beam taken from the roof of Winchester Cathedral a nail about 2¼ inches long was discovered in the middle of the piece at about 9 inches from the surface. The only conclusion to be drawn from a nail in that position is that it was driven into the young oak, and that before the tree was cut down wood had grown around the nail, that process probably occupying a couple of centuries. It is assumed that the beam was introduced in the course of the preparation of Winchester Cathedral, which was undertaken by Bishop Walkelyn and carried out between 1079 and 1093, but it should be remembered that some of his successors had works executed up to the end of the fourteenth century, when William of Wykeham commenced its restoration. It is thought that in any event the nail must have remained concealed for nearly 1000 years.—*Michigan Tradesman.*

Situation Wanted.

WANTED—Young man, business correspondent and office manager of fifteen years' practice would accept position with manufacturing company or jobbing house. Or would manage branch office or travel in the far West and Pacific Coast. Address BUSINESS, Drawer No. 79 Milledgeville, Penn.

He Met With a Lively Reception.

"I was in a commercial room a few evenings ago when a discussion was in progress as to the relative merits of England and some of the Continental countries. A young Turk who had been educated in England and who represented an English firm on the Continent spoke up. Turkey, he said, was a fine country; there were some fine orders to be booked at Constantinople. A sage, grizzled, old fellow, who has had a long career on the road, looked dubiously at the speaker. His aspect seemed to irritate the Turk not a little, and finally the speaker demanded what he thought of the opinions he had been expressing. 'It's rather a violent country, is Turkey,' was the reply. 'Violent; indeed it is not,' retorted the native of the traduced Empire. 'In what way were you violently treated?' 'Well,' was the deliberate reply, 'I lost my samples and had bricks and chimney-pots thrown at me in the very first shop into which I stepped.' The Turk foamed with rage. 'You are a liar,' he shouted. 'Every English traveler is treated with courtesy there; no Turkish tradesman would dare to do such a thing.' 'I did not say a word against any tradesman, either native or foreign,' returned the traveler calmly, blowing at his pipe. 'You said the men in the shop pelted you with bricks and chimney-pots,' roared the unserene Turk. 'I did not,' retorted the irritating Englishman. 'I referred to what an earthquake did.'"—*Exchange.*

To Bicycle Riders.

WE MAKE OUR TUBE OF FIFTY CARBON STEEL

Because a Tube like this of our .50% CARBON STEEL Is just as strong as a Tube like this of .25% CARBON STEEL

While weight for weight in a Bicycle our FIFTY CARBON Steel will last so long [redacted] and TWENTY-FIVE CARBON Steel will last only so long [redacted]

NOTE THE FULL IMPORT OF THE PARALLEL LINES.

The comparison which they graphically make indicates the result of the prolonged investigations of the most practical experts of the world.

That the tests in our own laboratory coroborate these results is merely so much to its credit; that the same is true of actual trial on the road equally proves the trial to have been made in bicycles of correct design and construction. THE FACT REMAINS.

The margin of safety is greatly increased by the use of this tube. Every bicycle manufacturer should use it; every dealer should insist on having it; every rider should demand it. Send for catalogue.

THE POPE TUBE CO., Hartford, Conn.

The Tack Manufacture.

Worcester (Mass.) is fast becoming one of the principal tack manufacturing centres in the country, although it is only twelve years since the first plant of this nature was established here. The use of tacks in the manufacture of boots and shoes has greatly extended the tack business, and particularly since the introduction of the shoe lasting machine. The city of Taunton and towns in the Old Colony have been for years, and still are, the great tack manufacturing centres of this country, but the principal plants in the Old Colony have been in existence for generations. Worcester has, in the plant of P. E. Somers on Hermon Street, the largest one in the State outside of Taunton, and its neighboring towns.

A tack usually differs from a nail in that it has a sharp point, while the point of a nail is blunt, or at least this is true as regards cut nails as distinguished from wire nails. While tacks are, as a rule, smaller than nails, they can be larger and still remain tacks, because of their sharp point. Tacks and cut nails are made, except for the finishing process, on a single machine, and the size of a tack factory is designated by the number of machines it contains. The factory of Mr. Somers has forty-eight machines, and the weekly product is seven tons of tacks, all for the shoe trade. Tacks for lasting machines are made on thirty-six out of the forty-eight machines. Almost every size of tack is made by Mr. Somers. Sometimes he is called upon to fill an order for a one-quarter ounce tack, which is three thirty-seconds of an inch long, and it requires 4000 of them to make one ounce in weight. A one-ounce tack, so-called because it takes one thousand of them to make an ounce, is only ten thirty-seconds of an inch long. One-half ounce tacks are made in great quantities for lasting machines. It takes 2000 of these to make an ounce. The great bulk of shoe tacks are made of steel, yet brass tacks are made to a considerable extent. Channel and corrugated cobblers' nails also make quite a large item for the factory's product.

The material for steel tacks comes in sheets thirty-six inches long by eighteen inches in width. It is first treated to a chemical bath to remove all scales and rust. It is then cut into strips of a desired width by a powerful cutting machine. The strips are then taken to the tack-making machine proper, and fed into the machine, one after the other. Each strip is placed in a tube by the machine operator, after which the further feeding of the strip and the cutting of the tack is automatic. The cutting of the tack is diagonally across the strip, and as each tack is clipped off an automatic attachment turns the strip over and thus it works over and back on the instant, all the while moving into the machine. As a point is clipped off, it is held in a vise-like attachment, while a hammer, called the header, puts a flat or round head upon it. When it is desired to make a tack with corrugated sides, a pair of dies are set in the machines, which make the corrugations automatically and form a part of the work of making a tack in a single operation. As the tacks are cut and headed they fall into a box, from whence they are taken to a sifting or sorting machine. This machine is in effect a revolving sieve placed on an incline. All defective tacks, like those too short or having a one-sided head, fall through the perforations, while the perfect ones slide out of the sieve into a box. All tacks designed for lasting machine use, however, are first taken to a rattling or polishing machine that they may be made smooth and clean. They are then run through the sorting machine, and to further make sure that every tack is a perfect one they are looked over by an examiner, who, by practice, has become exceedingly expert at the work. The slightest defect in a tack will stop the working of a lasting machine. The merest splinter on the side of a tack or the slightest scratch on the head will do this, but so expert are these tack examiners that rarely does a defective tack escape notice. Very few tacks are shipped in bulk, but are put up in paper boxes, and these are in turn put in wooden boxes, each made to contain 100 pounds. Every paper of tacks is weighed, and when closed a label giving the size and style is attached.—*Worcester (Mass.) Gazette.*

Early Uses of Structural Steel in Great Britain.

It is probable that many look upon the use of structural iron and steel for building as comparatively a new thing in Great Britain. On the contrary, in this as in many other branches of engineering practice, Great Britain has been a pioneer. Rennie, as far back as 1813, roofed the sheds attached to the East and West India docks on the Thames with cast iron for a distance of 1,300 feet. One of these sheds as then constructed, was 54 feet clear between supports. In his well-known "Report on the Use of Iron in Building," published in 1844, Fairbairn stated that it was then more than thirty years since iron beams and columns had been introduced into this country as a source of protection against fire. Fairbairn in that report recommended the use of iron doors, frames, shutters and staircases, and he gave a lot of useful information as to the properties of iron for building. The well-known mills of Sir Titus Salt, at Saltaire, were one of the earliest examples of the application of iron on a large scale to buildings.—*Ryland's Iron Trade Circular.*

Insuring Clerks' Honesty.

A Cleveland newspaper mentions a novel scheme adopted by a Hardware merchant of that city to insure himself against loss by the dishonesty of employes. When a new man comes into his employ he is called to the office, where there is a private interview. The employer promptly comes to the question, and asks the man if he thinks that he is honest. The replies naturally vary in frankness, but that is immaterial.

"Well," replies the merchant, "if ever you have an inclination to steal, just come to me, and I will give you the amount you thought of taking. Have no hesitancy, but come right up and I will gladly give it. We will thus save your character and I'll save a clerk."

In all his experience only one man has come to him for this purpose, and he was in desperate straits. As for money being stolen—never.—*Hardware & Metal.*

The Traveling Man.

Nobody knows what traveling men eat,
Nobody knows where traveling men sleep,
Nobody knows the dangers they meet,
Or how they must hustle positions to keep.

He works thro' the day and travels at night,
And his "boss" thinks, of course, that's perfectly right.
He rides on the "special"—most always she's late—
But oftener takes the slow local freight.

He flits thro' the land, welcomed by all,
Occasionally using unlimited gall,
While his firm sits at home, counting away
The cost of his trip and average per day.

He's the soul of good cheer, and knows how to tell
The latest jokes out—and does it quite well.
He avoids all hotels and towns that are "bum,"
But where he does go, you'll always find fun.

He doesn't play cards, but will gladly help out
If you need a fourth hand, should he happen about.
But the world moves along, and the traveling man, too,
Making sunshine for some and wealth for a few.

Then honor his calling, wish him long life,
Continued success and a good little wife.
Let's help him along and do what we can
For the friend of the trade—the traveling man.

—*Hardware Trade Journal.*

Truth is a file. Hard metal is brightened by it though the operation be disagreeable.—*L. A. W. Bulletin.*

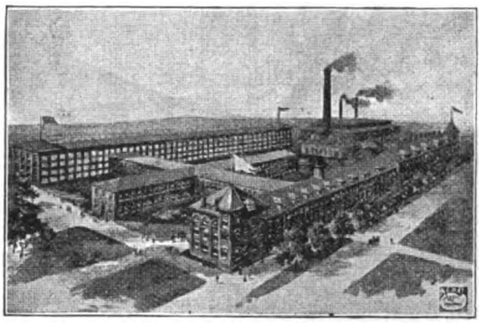
Joseph Jefferson.

The Famous Actor Looked About Our Factory and Said:



"This is the greatest institution I ever saw in my life. You have combined here utility and philanthropy. You make money, and you make happiness at the same time. To conduct a great business, which stretches out all over the world, and to practice, at the same time, the practical gospel of good will to men is about as far as any one can go until we get wings.

MR. JOSEPH JEFFERSON.

"The system which you sell to retail merchants reaches its highest perfection in your own plant.

"Panics do not hurt people who run their business as you do. The atmosphere of your establishment stimulates industry and good feeling. When hard times come and it is difficult to make sales, people like yours simply work enough harder to make up for it. I should like to take a little part in the work you are doing," concluded Mr. Jefferson, "and when I come to Dayton again I should be glad to give your people a free lecture."

Factory of The National Cash Register Company.

Big Facts.

Why The National Cash Register Company Can Manufacture and Sell Cheaper Than Any Other.

It employs 1,400 people.

Its factories cover eight and one-half acres of floor space.

It makes nothing but cash and autographic registers.

Its rights are protected by 335 patents.

It has 131 offices in all parts of the world.

It makes 90 different styles and kinds of cash registers.

It has sold over 117,000 cash registers.

Its registers are used all over the world.

It received 2,046 orders for registers in April, 1897.

It inspected 1,902 registers in April, 1897.

It shipped 1,886 registers in April, 1897.

It is doing more business in 1897 than ever before in its history.

25 in 25 Stores.

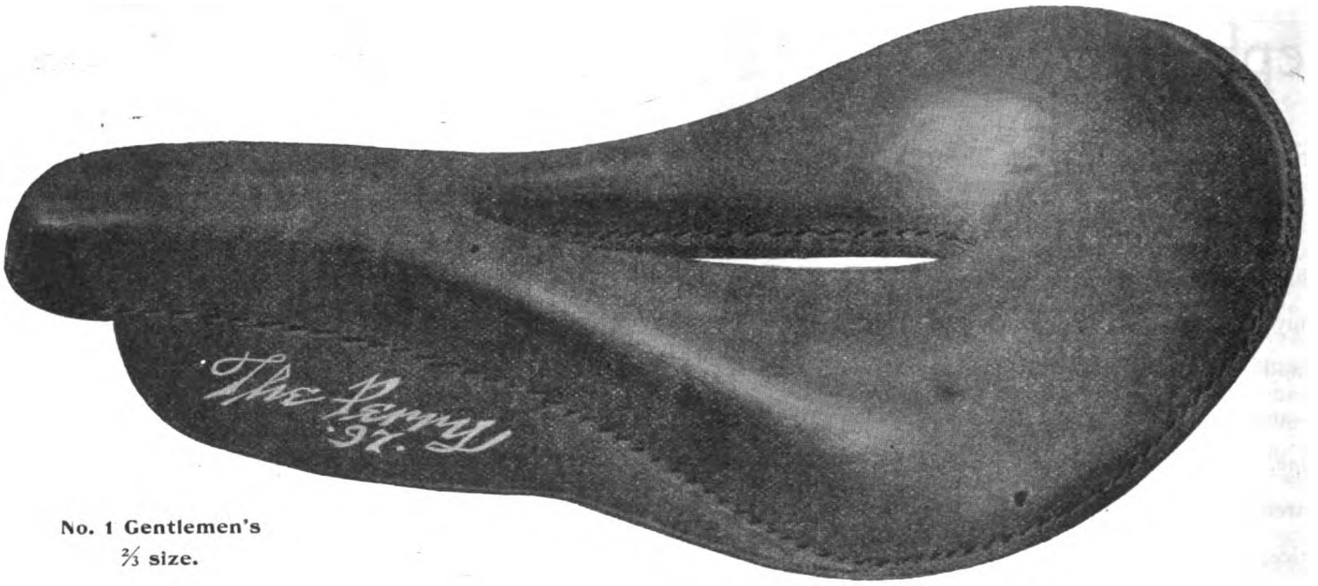
He Wouldn't Try to Do Business Without One.

Mr. T. P. Hunter owns twenty-five retail grocery stores in Philadelphia, and uses a National Cash Register in each of them.

In a recent letter to us he says:

"About three years ago my attention was called to your No. 79 National Cash Register. Becoming interested, I placed an order for one machine. Receiving perfec satisfaction from this, I ordered fifteen more, and subsequently ordered nine additional, making twenty-five, the number I now have in use in my stores.

MR. THOS. P. HUNTER.



"By the use of the registers I am able to tell at a glance how trade is running in each store, whether business is increasing or decreasing, and which of my clerks are making the sales.

"I would not attempt to run one of my stores without your No. 79 National Cash Register."

T. P. Hunter

If you will send us your name, address, business, number of clerks you employ, percentage of business done on credit, and state whether or not you employ a cashier, we will send you in return, free of charge, a handsomely-printed description of a cash register system for use in stores like yours. The National Cash Register Company, Department H, Dayton, Ohio.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over are requested to contribute to this page. News of new factories or companies, changes, improvements, etc, will be gladly received, and promptly published.

New Companies, Etc.

Bayonne, N. J.—The Bayonne Tool Works will engage in the manufacture, selling and dealing in metal ware and tools in this city. The capital stock is $2000, divided into 40 shares of a par value of $50 each. The stockholders are Joseph M. Cohen, of Bayonne, 10 shares; Adeline Cohen, of New York city, 5 shares, and Charles Cohen, of New York City, 5 shares.

Chicago, Ill. — The Chicago Hardware Foundry Co. has been incorporated. Capital stock, $5000, for manufacturing. Incorporators, Earl P. Sedgwick, J. A. Sedgwick and Hope Reed Cody.

Chicago, Ill.—The Chicago Truck Co., at this place, increased its capital stock from $10,000 to $20,000.

Denver, Col.—Articles of incorporation were recently filed for the Palmer Hydraulic Pump Co. Capital stock, $50,000. Offices, Aspen, Denver, Colorado Springs and elsewhere. The company will engage in the manufacture and sale of pumps. Philip O. Palmer, William J. Cox and William Rowland Cox are directors and incorporators.

Fulton, N. Y.—The Fulton Pulley Co. has been incorporated by Edwin Redhead and others, to manufacture and sell wooden split pulleys and other articles of wood and iron. Capital stock, $10,000, with $6000 paid in.

Glens Falls, N. Y.—A lantern manufactory is about to be added to the diversified industries of this village. The separator building on Maple Street, owned by the Gurdon Conkling estate, is being fitted up for the purpose by the Glens Falls Lantern Co., which is composed of D. V. Brown, Harvey G. Ellis and Albert Hermance. The building is sixty by thirty feet in dimensions, and two stories high, with basement. The machinery necessary for the work is now being built at Buffalo, and it is expected to have the plant in operation July 1. As secretary and treasurer, D. V. Brown will look after the business affairs of the company, while Mr. Hermance, who is a practical lantern maker and owner of the patents, will have charge of the manufacturing department.

Hillsdale, Mich.—A company has been organized here for the purpose of manufacturing heating furnaces, with a capital of $50,000. E. M. Washburn is president, S. H. Smith, vice-president; Geo. N. Smith, secretary and treasurer. C. H. Armstrong, of Toledo, Ohio, who was the originator of the enterprise, will be manager.

Indianapolis, Ind.—The Indiana Wringer Co. of this city, capital stock, $5000, was incorporated to-day. The stockholders are Herbert E. Powell, William L. Higgins and Clifford L. Powell. The Powell brothers came recently from Chicago, and have invested of their capital and Chicago "push" in this and several other enterprises.

Los Angeles, Cal.—Among the curiosities in the line of companies is the incorporation of the Universal Teapot Co., formed to manufacture and deal in vessels in which to infuse coffee. Principal place of business, San Francisco. Directors, N. J. Stone, C. D. Stuart and James Stuart, San Francisco; James Mackintosh, Morashire, Scotland, and J. D. Kenney, New York city. Capital stock, $1,000,000, of which amount $500,000 has been subscribed.

Olneyville, R. I.—The Norwood Mfg. Co. is the name of a new concern that is just starting in business in the old button factory in Tan Yard Lane. The company, which will manufacture novelties, door and name plates and business signs, is composed of Edward Dexter, of East Providence, and Elmon Johnson, of Johnston.

Omaha, Neb. — The Lawrence Shot & Lead Co. has been incorporated by Captain Lawrence, late manager of the Trust Shot & Lead Works; Walter G. Clark, Dan Farrell, Jr., and G. G. Sengesteadt, who comes from the East, and will be secretary of the company. It has established temporary offices with Mr. Clark, on Harney Street, and secured a location for trackage on Boulevard Street, adjoining the new Krug brewery. It is moving the old shot tower building, which is massive and admirably suited to the use of the business, from South Twenty-fourth Street to its new site, and is having plans drawn for new machinery, which it is expected, can be made in this city. The company expects soon to begin dropping shot and going into the field for business.

Paducah, Ky.—The Columbus, Ind., Handle & Rim Co. has leased the Ohio Rim & Spoke Works in this city, and will at once begin the manufacture of implement handles.

Richmond, Va.—A. M. Tyler, inventor of the automatic sash fastener, is on a trip North, gaining information looking to the economy of the manufacture of his clever device. When he returns home it will be decided whether the prospective company will erect its own plant for manufacturing the fasteners, or whether they will be manufactured by contract with some existing machine works.

Sandy Hill, N. Y.—The Sandy Hill Iron & Brass Works have been incorporated. The new concern is capitalized at $100,000, divided into 1000 shares, and is to begin business with $85,000. Its objects are stated to be to buy and sell machinery and supplies, and build and equip mills and factories. The directors for the first year are: F. M. Van Warner, C. T. Beach and R. C. Tefft, of Sandy Hill.

Savannah, Ga.—John P. Daly, inventor and patentee of several valuable devices, who has been negotiating for some time with capitalists, has closed a deal to organize a company for the manufacture, introduction and sale of his "patented combined can opener, screwdriver, tack puller and hammer." The invention is said by experts to be a very valuable one, being the best device of the kind ever patented. The company will be known as "The Daly-O'Brien Mfg. Co.," with headquarters in New York. The business will begin at once, and as soon as it is well under way a branch distributing office for the South will be established at Savannah.

Westfield, Mass.—A company it is likely will soon be formed to manufacture wooden pulleys of an improved style, whose inventor has been seeking assistance from local capital for some time. If the project "goes" the manufacturing will be done at Sherman's grist mill, at Little River, where excellent water power is available.

Improved Conditions.

Anderson, Ind.—The Shovel Works have had the "closed back" department, that is, the west wing of the factory, for two years, but it has never before been operated except during day time. It was recently started at night time, so far as the welding and polishing machines are concerned. About twenty more men were given employment. The business of the firm is increasing so rapidly during McKinley times, that this was necessary.

Baltimore, Md. — Bartlett, Hayward & Co. contemplate the enlargement of their foundry.

Chicago, Ill.—The Forge & Bolt Co. has begun the construction of an addition to its works.

Minneapolis, Minn.—A new woodenware factory is in course of construction on the river bank, at the foot of Eleventh Avenue N. E., which, when completed, will employ forty hands. The enterprise is controlled by the McVoys, and they expect to find a market for their products in the Northwest. The main building, 64x112 feet, will run four lathes, and will be a frame structure, iron clad, and two stories high. There will also be a brick power house, and a drying kiln.

North Tonawanda, N. Y. — About one month ago the Tonawanda Iron & Steel Co. banked its furnace "B" for enlargement. Since then the work has been going diligently on, but the real extent of the enlargement was not made public until recently. Five more tuyeres are being added to furnace "B," which will increase the output about one-third, and give employment to a large force of new men. Supt. Kerr said, recently, "We will take back all our old men, and in about one month we will run at full capacity with 450 men. We will have business enough to give new men work right along."

Rockford, Ill.—W. F. & John Barnes Co. have built a brick addition, 50x100 feet, four stories high. The buildings now cover a span of 250 feet by 150 feet.

Trenton, N. J.—The Skillman Hardware Co. is building a new japan kiln and kiln shed at its works on Philemon Street.

New Companies, Agencies, Etc.

Baltimore, Md.—The Faultless Roller Brake Co. has been incorporated by Benj. Steinheimer, William H. Weil, Louis Kraus and others, to manufacture bicycle novelties. Capital stock, $10,000.

Brooklyn, N. Y.—The Cushioned Steel Tire Co. has been incorporated by Alfred H. Bronson, John L. Douglass and Levi Eldridge. Capital stock, $10,000.

Carlyle, Ill.—H. T. & S. D. Ward, dealers in sewing machines and organs, will manufacture bicycles. They invite correspondence with manufacturers of wheels and sundries.

Norfolk, Va.—The White Cycle Co. has been incorporated with L. B. White, president, Luther W. White, vice-president, and H. L. White, secretary-treasurer, to carry on a bicycle business, etc. Capital stock, $10,000.

St. Louis, Mo.—The Vandegrift Tire Co. has been incorporated by John McCargo, Charles Duffee and A. G. Endearle. Capital stock, $1,000,000.

Syracuse, N. Y.—The Frontenac Mfg. Co. has been incorporated to manufacture bicycles. Capital stock, $75,000. Directors: Edwin D. Dickinson, Charles H. Duell, F. Herbert Halcomb, Willard Kimball and Frank C. Howlett.

Toledo, Ohio.—M. D. Baker has opened a new store in the Halsted-Bennett block, on Superior Street.

Washington, D.C.—The Hydrocycle Mfg. Co. has been incorporated with E. S. Randall, president; A. P. Gordon, vice-president, and C. H. Pirtle, secretary-treasurer. Capital stock, $10,000.

Wilmington, Del.—The McDaniel Cycle Co., recently incorporated by the legislature, was organized recently. The following officers were elected; President, William E. Hawkins; vice-president, Jesse K. Baylis; secretary, treasurer and general manager, B. F. McDaniel. The company's place of business is at No. 1011 Market Street, where it will engage in the manufacture, sale and repair of bicycles and tricycles.

Changes and Improvements.

Adrian, Mich.—Streeter & Teachant have dissolved.

Albernini, B. C.—D. M. Patterson, reported to have sold to W. H. Millingness.

Auburn, Ill.—Savage & Ramsay, harness, etc., desire to add a bicycle department, and invite propositions from manufacturers.

Augusta, Ga.—The Southern Cycle & Sporting Goods Co; their entire stock is offered for sale by E. G. Costello, receiver.

Boston, Mass.—Hatch Bicycle Patch Co. removed to No. 1 Lincoln Street.

Boston, Mass.—Mechanical Mfg. Co., removed temporarily to Doane Street.

Charleston, Ill.—C. J. McCarty sold out.

Chicopee, Mass.—William Thereau has opened a new repair shop at No. 105½ Main Street.

Coleman, Mich.—F. H. Gibbs & Co., succeeded by Gibbs & Wixson.

Danville, Ill.—Swisher Cycle Co. sold out.

Denver, Col.—A. L. Deane & Co. will remove to Kittredge building.

Galveston, Tex.—John A. Payment has been succeeded by John A. Payment & Co.

Lafayette, Ind.—The Lindsay Bicycle Works have been sold to Mr. Kirker, of Cincinnati, who was largely interested in the bicycle business in that city. The works will be opened shortly with several hundred employes.

Lebanon, Pa.—David Brightbill, sold out to William Freshley.

Littleton, N.H.—C. J. Currier has opened a new repair store.

Meriden, Conn.—Brainerd & Wilcox have dissolved; W. J. Wilcox will continue.

Oakland, Ill.—W. J. Ashmore sold out.

Oneida, N. Y.—Plate & Co. removed from No. 45 to No. 77 Madison Street. F. G. Underwood has retired, and been succeeded by F. W. Chapin.

Petoskey, Mich.—Miller & Co. have been succeeded by C. F. Lancaster.

Philadelphia, Pa.—William J. Haines Co., steel and bicycle parts, are reported to have sold out.

Rushmore, Minn.—Ferrin & James have been succeeded by A. W. Ferrin.

Toledo, Ohio.—Ott & Helmley, manufacturers of the Lucas wheel, have moved into larger quarters at No. 602 Monroe Street.

Wadena, Minn.—E. B. Benedict will enlarge his factory.

Recent Embarrassments.

Hyde Park, Mass.—Corbett & Andrews reported to have applied for relief in bankruptcy.

Mobile, Ala.—George B. Toulmin & Co. have assigned to George B. Cleveland.

Newark, N. J.—The Warwick Tube Co.; Roderick Byington appointed receiver. Liabilities estimated at $10,000. It was chartered in January, 1896, and had a claimed capital of $25,000.

Norfolk, Va.—S. L. Sears, bicycles and bicycle parts, assigned to Bruce Simmons, trustee. He reserves the tools and utensils of his trade, valued at $100. Liabilities upwards of $100,000; assets not stated.

Norwich, Conn.—C. W. Cilley Co. are in the hands of a receiver. The company was started by Mr. Cilley in June, 1895, and incorporated in November, 1896, with a capital stock of $25,000. Reports state that the company entered into a contract with a New York house by the terms of which it could not collect moneys due for some time to come. This contract expires July 1 next. Being cramped for funds on account of the capital thus tied up, application was made for a receiver for the company, and Frank H. Allen, of Norwich, was appointed.

Pittsburg, Pa.—The Pittsburg Cycle Co.; premises have been closed by the sheriff under executions against A. C. Hess, individually.

Richmond, Va.—The Old Dominion Cycle & Supply Store, No. 1004 East Main Street; Charles J. Hains has made an assignment to Ordway Puller, trustee. The deed conveys all of Mr. Hain's interest in stock of bicycles and attachments in the store, together with all accounts, the unexpired list and other property on the premises. Liabilities about $1500.

Rochester, N.Y.—Punnett Cycle Mfg. Co.; sheriff in possession of the factory.

Seattle, Wash.—The Bingley-Hardwick Co., sporting goods, stock, etc., sold out by sheriff.

Recent Fires.

Northampton, Mass.—The Hampshire Cycle Co.; damaged by fire, at a loss of $12,000. Fully covered by insurance.

Simcoe, Ont.—George Gilmour, bicycle repairer, damaged by fire at a loss of $800. No insurance.

Winona, Minn.—The Winona Wooden Rim Co., bicycle rim factory damaged by fire, at a loss of $10,000; partially insured.

East Hampton, Conn.

Bells.

The belle of the ball on her escort leaned,
And so very happy the dear girl seemed,
That he took her aside to a cozy retreat
And told her the story that's always so sweet.

She perked up her lips, so enticing and fair,
And his own were reaching the heaven that's there,
When she said, "Dear boy, this is only a sell.
You'll first have to buy me that 'Climax' bell."

The new 1897 model "CLIMAX" Bell possesses without doubt the most improved Lock Clamp known. Can be adjusted to the Handle Bar quickly without removing the screw, thus saving all vexatious worriment in the operation, and at the same time presents a more attractive appearance than any other kind of an attachment.

We have just published a handsome little booklet to be carried in the vest pocket, containing lots of valuable information for the benefit of wheelmen. Send us a two-cent stamp and we will mail you a copy.

THE ONLY "PERFECTION" WATER ELEVATOR AND PURIFYING PUMP

Dealers, get in line and sell your trade an article you can guarantee for ten years. The chain or buckets is the principal factor in any elevator. The **Perfection Bucket** is cut by die in one piece of **Black Open Hearth Steel** folded together by double lap seams, and the entire chain **Galvanized** after **Construction.** Others are made of several pieces of galvanized iron soldered together. Simply this one feature is a sufficient guarantee that the **Perfection** has no equal. It is handled by all leading jobbers throughout the world. Call for the **Perfection.** Take no substitute.

It is the simplest structure for raising water on the continent; guaranteed never to freeze. . .

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

CRONK'S

Combination Fencing Plier.

This newly invented fencing tool is needed by all people that build or have occasion to remove or repair wire fence, as it is made with two staple pullers, two hammers and two button cutters. They are the same heft as the 1½ Maydole Hammer, and they are made of forged tool steel. No good farmer will be without one. They are warranted to cut No. 8 hard or No. 6 soft wire. Like the celebrated Cronk Plier they are fully warranted in all respects. No. 12, 11 in. long, $12.00. Dis. . . .

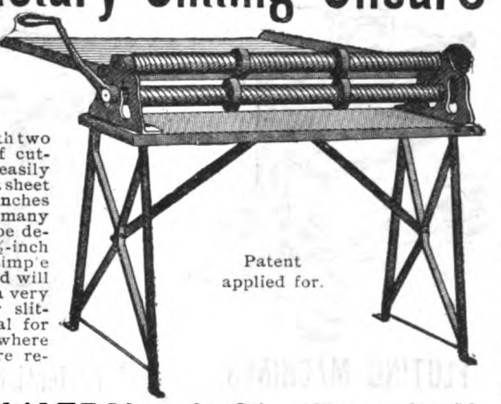
PUTNAM NAIL COMPANY

NEW DEPARTURE.

In consequence of the action of the National Hardware Association, we now propose to sell direct to the general jobbers of the country. . . . . .
All restrictions have been removed as to quotations to be made by the trade from ocean to ocean. . . . .
The high quality of the Putnam Nail makes it an easier seller at an advanced price over nails made by rolling and shearing. . . . . .
In case local dealer does not handle our goods, address

The Putnam Nail Co., Neponset, Boston, Mass.

235 Lake St., Chicago, Ill.
12-14 Drum St., San Francisco, Cal.



The Capital Gutter Former

is adapted to form gutter from 3 in. to 7 in. inclusive. The forming of the head and gutter is practically a continuous operation. Capacity 600 feet perfectly formed gutter per hour with two ordinary men or boys.

Mention HARDWARE.

The Rotary Slitting Shears

Patent applied for.

are provided with two or more pair of cutters which are easily adjusted to cut a sheet of metal 30 inches wide into as many strips as may be desired, from ½-inch and wider; is simple and durable, and will be found to be a very useful tool for slitting sheet metal for any purpose where long lengths are required.

For further information and prices address **WATROUS & CO., Troy, N. Y.**

HAS PROVED VERY SATISFACTORY.

Zenith Cycle Saddle Co., Philadelphia, Pa. [*Bicycle Saddles*]: We believe that the trade on bicycle sundries must drift to the Hardware trade, as being so much more reliable. Your paper must then prove the most reliable as an advertising medium. Our advertisement has proved very satisfactory.

RESERVOIR PUNCH

For Euchre and Whist Parties.

This Pocket catches the pieces punched from Tally Cards, thus preventing a littering of the carpet.
Is hinged, can be opened, emptied and closed in an instant.
Of great value to Railroads as it prevents the replacing of pieces punched out of monthly or commutation tickets.
Also valuable in Restaurants where punch tickets are used.

A Valuable Medium.

Humber & Co., Westboro, Mass. [*Bicycles*]: From our limited observation we should consider HARDWARE a very valuable medium for advertising intended to reach the Hardware trade. It is interestingly made up, and we think could not fail to attract the readers in that line of business. We can readily understand that it would be a valuable medium for advertising certain lines of cycles and cycle sundries, adapted for sale to Hardware stores. . . .
